Contents

Preface	v
1 Introduction: Problems in Environmental Monitoring and Assessment	1
<i>Lawrence H. Cox, Douglas Nychka, Walter W. Piegorisch</i>	
1 Statistical Methods for Environmental Monitoring and Assessment	1
2 Outline of Case Studies	2
3 Sources of Data and Software	3
Acknowledgments	4
2 Modeling Ozone in the Chicago Urban Area	5
<i>Jerry M. Davis, Brian K. Eder, Peter Bloomfield</i>	
1 Introduction	5
1.1 Health and Environmental Effects	6
1.2 Background	6
1.3 Overview of the Case Studies	7
2 Data Sources	8
2.1 Ozone Data	8
2.2 Meteorological Data	8
3 Trend Analysis and Adjustment	10
3.1 Parametric Modeling	10
3.2 Urban Ozone in Chicago	11
3.3 Comparison with Rural Locations	15
4 Trends from Semiparametric Models	16
4.1 Semiparametric Modeling	16
4.2 Application to Chicago Urban Ozone	17
5 Trends in Exceedances	19
5.1 Exceedance Modeling	19
5.2 Modeling Exceedance Probabilities for the Chicago Urban Area	20
5.3 Modeling Excess Ozone over a Threshold	21
5.4 Prediction of Extreme Ozone Levels	23
6 Summary	23
Acknowledgments	24
References	24

3	Regional and Temporal Models for Ozone Along the Gulf Coast	27
	<i>Jerry M. Davis, Brian K. Eder, Peter Bloomfield</i>	
1	Introduction	27
1.1	Scientific Issues	27
1.2	Data and Dimension Reduction	28
2	Diurnal Variation in Ozone	29
2.1	Singular Value Decomposition	30
2.2	Urban Ozone in Houston	31
2.3	Conclusions	35
3	Meteorological Clusters and Ozone	35
3.1	Cluster Analysis	37
3.2	Nonparametric Regression	38
3.3	Urban Ozone in Houston	40
4	Regional Variation in Ozone	44
4.1	Rotated Principal Components	45
4.2	Gulf Coast States	46
5	Summary	48
6	Future Directions	48
	References	49
4	Design of Air-Quality Monitoring Networks	51
	<i>Douglas Nychka, Nancy Saltzman</i>	
1	Introduction	51
1.1	Environmental Issues	51
1.2	Why Find Spatial Predictions for Ozone?	52
1.3	Designs and Data Analysis	53
1.4	Chapter Outline	54
2	Data	55
2.1	Hourly Ozone and Related Daily Summaries	55
2.2	Handling Missing Data	56
2.3	Model Output	56
3	Spatial Models	57
3.1	Random Fields	57
3.2	Spatial Estimates	60
3.3	Design Evaluation	61
4	Thinning a Small Urban Network	62
4.1	Preliminary Results	63
4.2	Designs from Subset Selection	63
4.3	Results	65
5	Adding Rural Stations to Northern Illinois	67
5.1	Space-Filling Designs	68
5.2	Results for Rural Illinois	71

6	Modifying Regional Networks	71
6.1	Results for the Larger Midwest Network	72
7	Scientific Contributions and Discussion	74
7.1	Future Directions	74
	References	75
5	Estimating Trends in the Atmospheric Deposition of Pollutants	77
	<i>David Holland</i>	
1	Introduction	77
2	Monitoring Data	78
2.1	Case Study I	78
2.2	Case Study II	78
2.3	Additional Ongoing Monitoring	79
3	Case Studies	80
3.1	Gamma Model for Trend Estimation	80
3.2	Network Ability to Detect and Quantify Trends	82
4	Future Research	87
	Acknowledgment	88
	References	88
6	Airborne Particles and Mortality	91
	<i>Richard L. Smith, Jerry M. Davis, Paul Speckman</i>	
1	Introduction	91
2	Statistical Studies of Particles and Mortality	93
3	An Example: Data from Birmingham, Alabama	94
3.1	Summary of Available Data	94
3.2	Statistical Modeling Strategy	95
4	Results for Birmingham	102
4.1	Linear Least Squares and Poisson Regression	102
4.2	Nonlinear Effects	104
4.3	Nonparametric Regression	108
5	Comparisons with Other Cities	111
5.1	Seasonal Parametric and Semiparametric Models	112
5.2	Results: Chicago	112
5.3	Results: Salt Lake County	113
5.4	Direct Comparisons Between Chicago and Birmingham	114
6	Conclusions: Accidental Association or Causal Connection?	118
	References	119
7	Categorical Exposure-Response Regression Analysis of Toxicology Experiments	121
	<i>Minge Xie, Douglas Simpson</i>	
1	Introduction	121

1.1	Critical Exposure-Response Information and Modeling Approaches	122
1.2	Issues in Exposure-Response Risk Assessment	123
2	The Tetrachloroethylene Database	124
2.1	Severity Scoring	124
2.2	Censoring	125
3	Statistical Models for Exposure-Response Relationships	126
3.1	Haber's Law	126
3.2	Homogeneous Logistic Model	127
3.3	Stratified Regression Model	129
3.4	Marginal Modeling Approach	131
3.5	Other Issues	132
4	Computing Software: <i>CatReg</i>	134
5	Application to Tetrachloroethylene Data	134
6	Conclusions	136
7	Future Directions	138
	Acknowledgments	138
	References	138
8	Workshop: Statistical Methods for Combining Environmental Information	143
	<i>Lawrence H. Cox</i>	
1	The NISS-USEPA Workshop Series	143
2	Combining Environmental Information	144
3	Combining Environmental Epidemiology Information	145
3.1	Passive Smoking	146
3.2	Nitrogen Dioxide Exposure	148
4	Combining Environmental Assessment Information	150
4.1	A Benthic Index for the Chesapeake Bay	150
4.2	Hazardous Waste Site Characterization	152
4.3	Estimating Snow Water Equivalent	152
5	Combining Environmental Monitoring Data	153
5.1	Combining P-Samples	153
5.2	Combining P- and NP-Samples	155
5.3	Combining NP-Samples	155
5.4	Combining NP-Samples Exhibiting More Than Purposive Structure	155
6	Future Directions	156
	References	157
A	Appendix A: FUNFITS, Data Analysis and Statistical Tools for Estimating Functions	159
	<i>Douglas Nychka, Perry D. Haaland, Michael A. O'Connell, Stephen Ellner</i>	
1	Introduction	159

2	What's So Special About FUNFITS?	160
2.1	An Example	161
3	A Basic Model for Regression	165
4	Thin-Plate Splines: <i>tps</i>	166
4.1	Determining the Smoothing Parameter	167
4.2	Approximate Splines for Large Data Sets	168
4.3	Standard Errors	169
5	Spatial Process Models: <i>krig</i>	169
5.1	Specifying the Covariance Function	170
5.2	Some Examples of Spatial Process Estimates	172
	Acknowledgments	178
	References	179
B	Appendix B: DI, A Design Interface for Constructing and Analyzing Spatial Designs	181
	<i>Nancy Saltzman, Douglas Nychka</i>	
1	Introduction	181
2	An Example	182
3	How DI Works	182
3.1	Network Objects	182
3.2	The Design Editor	182
3.3	User Modifications	183
C	Appendix C: Workshops Sponsored Through the EPA/NISS Cooperative Agreement	187
D	Appendix D: Participating Scientists in the Cooperative Agreement	189
