Contents

	Preface	xi
I	Getting Started	I
	1.1 Introduction to Mathematica	1
	1.2 Getting Started with Mathematica	2
	1.3 Loading Packages	4
	Two Words of Caution	6
	1.4 Getting Help from Mathematica	8
	Help Commands	8
	Mathematica Help	12
2	Mathematical Operations on Numbers, Expressions, and Functions	23
	2.1 Numerical Calculations and Built-in Functions	23
	Numerical Calculations	23
	Built-in Constants	27
	Built-in Functions	28
	The Absolute Value, Exponential and Logarithmic Functions	28
	Trigonometric Functions	31
	Inverse Trigonometric Functions	33
	A Word of Caution	39

2.2 Expressions and Functions	40
Basic Algebraic Operations on Expressions	40
Naming and Evaluating Expressions	42
A Word of Caution	44
Defining and Evaluating Functions	45
Additional Ways to Evaluate Functions and Expressions	51
Composition of Functions	52
A Word of Caution	55
2.3 Graphing Functions, Expressions, and Equations	56
Graphing Functions of a Single Variable	56
Graphing Several Functions	60
Piecewise-Defined Functions	62
Graphs of Parametric Functions in Two Dimensions	64
Three-Dimensional Graphics	66
Graphing Level Curves of Functions of Two Variables	70
Graphing Parametric Curves and Surfaces in Space	74
A Word of Caution	83
2.4 Exact and Approximate Solutions of Equations	84
Exact Solutions of Equations	84
Numerical Approximation of Solutions of Equations	90
Application: Intersection Points of Graphs of Functions	94

3 Calculus **101**

3.1 Computing Limits	101
Computing Limits	103
One-Sided Limits	108
A Word of Caution	109
3.2 Differential Calculus	110
Calculating Derivatives of Functions and Expressions	110
Tangent Lines	113
Locating Critical Points and Inflection Points	116
Using Derivatives to Graph Functions	119
Graphing Functions and Derivatives	123
Approximations with <code>FindRoot</code>	126
Application: Rolle's Theorem and The Mean-Value Theorem	128
Application: Graphing Functions and Tangent Lines	131
Application: Maxima and Minima	134

3.3 Implicit Differentiation	142
Computing Derivatives of Implicit Functions	142
Other Methods to Compute Derivatives of Implicit Functions	146
Other Methods to Graph Equations	147
3.4 Integral Calculus	149
Estimating Areas	149
Computing Definite and Indefinite Integrals	157
Approximating Definite Integrals	161
Application: Area Between Curves	162
Application: Arc Length	166
Application: Volume of Solids of Revolution	167
Application: The Mean-Value Theorem for Integrals	172
A Word of Caution	173
3.5 Series	173
Introduction to Series	173
Determining the Interval of Convergence of a Power Series	180
Computing Power Series	184
Application: Approximating the Remainder	189
Application: Series Solutions to Differential Equations	192
Other Series	199
3.6 Multivariable Calculus	201
Limits of Functions of Two Variables	201
Partial Differentiation	203
Other Methods of Computing Derivatives	206
Application: Classifying Critical Points	209
Application: Tangent Planes	212
Application: The Method of Lagrange Multipliers	214
Double Integrals	218
Application: Volume	221
Triple Integrals	226
Higher-Order Integrals	228
4 Introduction to Lists and Tables	229
4.1 Defining Lists	229
A Word of Caution	235
4.2 Operations on Lists	236
Extracting Elements of Lists	236
Graphing Lists of Points and Lists of Functions	240
Evaluation of Lists by Functions	245
Evaluation of Parts of Lists by Functions	249

Other List Operations	250
Alternative Way to Evaluate Lists by Functions	251
4.3 Mathematics of Finance	252
Application: Compound Interest	252
Application: Future Value	254
Application: Annuity Due	255
Application: Present Value	257
Application: Deferred Annuities	258
Application: Amortization	259
Application: Financial Planning	263
4.4 Other Applications	272
Application: Secant Lines, Tangent Lines, and Animations	272
Application: Approximating Lists with Functions	277
Application: Introduction to Fourier Series	285
Application: The One-Dimensional Heat Equation	289

5 Nested Lists: Matrices and Vectors **295**

5.1 Nested Lists: Introduction to Matrices, Vectors, and Matrix Operations	296
Defining Nested Lists: Matrices and Vectors	296
Extracting Elements of Matrices	300
Basic Computations with Matrices and Vectors	304
5.2 Linear Systems of Equations	308
Calculating Solutions of Linear Systems of Equations	308
Gauss-Jordan Elimination	313
5.3 Selected Topics from Linear Algebra	316
Fundamental Subspaces Associated with Matrices	316
The Gram-Schmidt Process	318
Linear Transformations	322
Application: Rotations	324
Eigenvalues and Eigenvectors	326
Jordan Canonical Form	331
The QR Method	324
5.4 Maxima and Minima Using Linear Programming	337
The Standard Form of a Linear Programming Problem	337
The Dual Problem	339
Application: A Transportation Problem	343

5.5 Vector Calculus	347
Definitions and Notation	347
Application: Green's Theorem	354
Application: The Divergence Theorem	356
Application: Stoke's Theorem	358
6 Applications Related to Ordinary and Partial Differential Equations	363
<hr/>	
6.1 First-Order Ordinary Differential Equations	364
Separable Differential Equations	364
Homogeneous Differential Equations	366
Exact Equations	369
Linear Equations	371
Numerical Solutions of First-Order Ordinary Differential Equations	375
Application: Population Growth and the Logistic Equation	377
Application: Newton's Law of Cooling	381
Application: Free-Falling Bodies	383
6.2 Higher-Order Ordinary Differential Equations	387
The Homogeneous Second-Order Equation with Constant Coefficients	391
Nonhomogeneous Equations with Constant Coefficients	
Variation of Parameters	396
Cauchy-Euler Equations	401
Application: Harmonic Motion	403
Numerical Solutions of Higher-Order Ordinary Differential Equations	406
Application: The Simple Pendulum	407
6.3 Power Series Solutions of Ordinary Differential Equations	411
Power Series Solutions about Ordinary Points	411
Power Series Solutions about Regular Singular Points	418
6.4 Using the Laplace Transform to Solve Ordinary Differential Equations	426
Definition of the Laplace Transform	426
Solving Ordinary Differential Equations with the Laplace Transform	430
Application: The Convolution Theorem	435
Application: The Dirac Delta Function	438

6.5	Systems of Ordinary Differential Equations	441
	Homogeneous Linear Systems with Constant Coefficients	441
	Variation of Parameters	446
	Nonlinear Systems, Linearization, and Classification of Equilibrium Points	449
	Numerical Solutions of Systems of Ordinary Differential Equations	451
	Application: Predator-Prey	451
	Application: The Double Pendulum	458
6.6	Some Partial Differential Equations	461
	The One-Dimensional Wave Equation	461
	Application: Zeros of the Bessel Functions	465
	Application: The Two-Dimensional Wave Equation	467
7	Some Graphics Packages	481
<hr/>		
7.1	ComplexMap	482
7.2	ContourPlot3D	485
7.3	Graphics	487
	Graphing in Polar Coordinates	487
	Creating Charts	490
7.4	ImplicitPlot	492
7.5	MultipleListPlot and Graphics3D	495
7.6	PlotField and PlotField3D	496
7.7	Polyhedra and Shapes	500
	Selected References	509
	Index	511
