Contents

Preface xi

Chapter 1. The Life and Work of É. Cartan 1
§1.1. Parents' home 1
§1.2. Student at a school and a lycée 2
§1.3. University student 4
§1.4. Doctor of Science 6
§1.5. Professor 8
§1.6. Academician 17
§1.7. The Cartan family 24
§1.8. Cartan and the mathematicians of the world 27

Chapter 2. Lie Groups and Algebras 33
§2.1. Groups 33
§2.2. Lie groups and Lie algebras 37
§2.3. Killing's paper 42
§2.4. Cartan's thesis 45
§2.5. Roots of the classical simple Lie groups 46
§2.6. Isomorphisms of complex simple Lie groups 51
§2.7. Roots of exceptional complex simple Lie groups 51
§2.8. The Cartan matrices 53
§2.9. The Weyl groups 55
§2.10. The Weyl affine groups 60
§2.11. Associative and alternative algebras 63
§2.12. Cartan's works on algebras 67
§2.13. Linear representations of simple Lie groups 69
§2.14. Real simple Lie groups 73
§2.15. Isomorphisms of real simple Lie groups 78
§2.16. Reductive and quasireductive Lie groups 82
§2.17. Simple Chevalley groups 84
§2.18. Quasigroups and loops 85

Chapter 3. Projective Spaces and Projective Metrics 87
§3.1. Real spaces 87
§3.2. Complex spaces 93
§3.3. Quaternion spaces 95
§3.4. Octave planes 96
§3.5. Degenerate geometries 97
§3.6. Equivalent geometries 101
§3.7. Multidimensional generalizations of the Hesse transfer principle 107
§3.8. Fundamental elements 109
§3.9. The duality and triality principles 113
§3.10. Spaces over algebras with zero divisors 116
§3.11. Spaces over tensor products of algebras 118
§3.12. Degenerate geometries over algebras 121
§3.13. Finite geometries 123

Chapter 4. Lie Pseudogroups and Pfaffian Equations 125
§4.1. Lie pseudogroups 125
§4.2. The Kac-Moody algebras 127
§4.3. Pfaffian equations 129
§4.4. Completely integrable Pfaffian systems 130
§4.5. Pfaffian systems in involution 132
§4.6. The algebra of exterior forms 134
§4.7. Application of the theory of systems in involution 135
§4.8. Multiple integrals, integral invariants, and integral geometry 136
§4.9. Differential forms and the Betti numbers 139
§4.10. New methods in the theory of partial differential equations 142

Chapter 5. The Method of Moving Frames and Differential Geometry 145
§5.1. Moving trihedra of Frênet and Darboux 145
§5.2. Moving tetrahedra and pentaspheres of Demoulin 147
§5.3. Cartan's moving frames 148
§5.4. The derivational formulas 150
§5.5. The structure equations 152
§5.6. Applications of the method of moving frames 153
§5.7. Some geometric examples 154
§5.8. Multidimensional manifolds in Euclidean space 158
§5.9. Minimal manifolds 160
§5.10. "Isotropic surfaces" 162
§5.11. Deformation and projective theory of multidimensional manifolds 166

§5.12. Invariant normalization of manifolds 170
§5.13. "Pseudo-conformal geometry of hypersurfaces" 174

Chapter 6. Riemannian Manifolds. Symmetric Spaces 177
§6.1. Riemannian manifolds 177
§6.2. Pseudo-Riemannian manifolds 181
§6.3. Parallel displacement of vectors 181
§6.4. Riemannian geometry in an orthogonal frame 183
§6.5. The problem of embedding a Riemannian manifold into a Euclidean space 184
§6.6. Riemannian manifolds satisfying "the axiom of plane" 185
§6.7. Symmetric Riemannian spaces 186
§6.8. Hermitian spaces as symmetric spaces 191
§6.9. Elements of symmetry 193
§6.10. The isotropy groups and orbits 196
§6.11. Absolutes of symmetric spaces 198
§6.12. Geometry of the Cartan subgroups 199
§6.13. The Cartan submanifolds of symmetric spaces 200
§6.14. Antipodal manifolds of symmetric spaces 201
§6.15. Orthogonal systems of functions on symmetric spaces 202
§6.16. Unitary representations of noncompact Lie groups 204
§6.17. The topology of symmetric spaces 207
§6.18. Homological algebra 209

Chapter 7. Generalized Spaces 211
§7.1. "Affine connections" and Weyl's "metric manifolds" 211
§7.2. Spaces with affine connection 212
§7.3. Spaces with a Euclidean, isotropic, and metric connection 215
§7.4. Affine connections in Lie groups and symmetric spaces with an affine connection 216
§7.5. Spaces with a projective connection 219
§7.6. Spaces with a conformal connection 220
§7.7. Spaces with a symplectic connection 221
§7.8. The relativity theory and the unified field theory 222
§7.9. Finsler spaces 223
§7.10. Metric spaces based on the notion of area 225
§7.11. Generalized spaces over algebras 226
§7.12. The equivalence problem and G-structures 228
§7.13. Multidimensional webs 231

Conclusion 235

Dates of Cartan's Life and Activities 239

List of Publications of Élie Cartan 241

Appendix A. Rapport sur les Travaux de M. Cartan, by H. Poincaré 263

Appendix B. Sur une dégénérescence de la géométrie euclidienne, by É. Cartan 273

Appendix C. Allocution de M. Élie Cartan 275

Appendix D. The Influence of France in the Development of Mathematics 281
