Analysis in Banach Spaces

Volume I: Martingales and
Littlewood-Paley Theory

Springer

Contents

1	Bochner spaces	1
1.1	Measurability	2
1.1.a	Functions on a measurable space $(S, \mathcal{A})$	2
1.1.b	Functions on a measure space $(S, \mathcal{A}, \mu)$	8
1.1.c	Operator-valued functions	12
1.2	Integration	13
1.2.a	The Bochner integral	13
1.2.b	The Bochner spaces $L^p(S; X)$	21
1.2.c	The Pettis integral	30
1.3	Duality of Bochner spaces	36
1.3.a	Elementary duality results	37
1.3.b	Duality and the Radon–Nikodým property	40
1.3.c	More about the Radon–Nikodým property	48
1.4	Notes	59
2	Operators on Bochner spaces	67
2.1	The L^p -extension problem	68
2.1.a	Boundedness of $T \otimes I_X$ for positive operators T	70
2.1.b	Boundedness of $T \otimes I_H$ for Hilbert spaces H	73
2.1.c	Counterexamples	78
2.2	Interpolation of Bochner spaces	83
2.2.a	The Riesz–Thorin interpolation theorem	83
2.2.b	The Marcinkiewicz interpolation theorem	86
2.2.c	Complex interpolation of the spaces $L^p(S; X)$	91
2.2.d	Real interpolation of the spaces $L^p(S; X)$	96
2.3	The Hardy–Littlewood maximal operator	98
2.3.a	Lebesgue points and differentiation	100
2.3.b	Convolutions and approximation	103
2.4	The Fourier transform	105
2.4.a	The inversion formula and Plancherel’s theorem	106
2.4.b	Fourier type	110

2.4.c	The Schwartz class $\mathcal{S}(\mathbb{R}^d; X)$	116
2.4.d	The space of tempered distributions $\mathcal{S}'(\mathbb{R}^d; X)$	118
2.5	Sobolev spaces and differentiability	122
2.5.a	Weak derivatives	122
2.5.b	The Sobolev spaces $W^{k,p}(D; X)$	123
2.5.c	Almost everywhere differentiability	124
2.5.d	The fractional Sobolev spaces $W^{s,p}(\mathbb{R}^d; X)$	133
2.6	Conditional expectations	137
2.6.a	Uniqueness	140
2.6.b	Existence	143
2.6.c	Conditional limit theorems	146
2.6.d	Inequalities and identities	148
2.7	Notes	154
3	Martingales	165
3.1	Definitions and basic properties	166
3.1.a	Difference sequences	167
3.1.b	Paley–Walsh martingales	168
3.1.c	Stopped martingales	170
3.2	Martingale inequalities	173
3.2.a	Doob’s maximal inequalities	173
3.2.b	Rademacher variables and contraction principles	180
3.2.c	John–Nirenberg and Kahane–Khintchine inequalities	186
3.2.d	Applications to inequalities on $\mathbb{R}^d$	193
3.3	Martingale convergence	199
3.3.a	Forward convergence	200
3.3.b	Backward convergence	201
3.3.c	The Itô–Nisio theorem for martingales	207
3.3.d	Martingale convergence and the RNP	211
3.4	Martingale decompositions	213
3.4.a	Gundy decomposition	214
3.4.b	Davis decomposition	218
3.5	Martingale transforms	220
3.5.a	Basic properties	220
3.5.b	Extrapolation of L^p -inequalities	229
3.5.c	End-point estimates in L^1	234
3.5.d	Martingale type and cotype	238
3.6	Approximate models for martingales	244
3.6.a	Universality of Paley–Walsh martingales	244
3.6.b	The Rademacher maximal function	249
3.6.c	Approximate models for martingale transforms	255
3.7	Notes	259

4	UMD spaces	267
4.1	Motivation	268
4.1.a	Square functions for martingale difference sequences	268
4.1.b	Unconditionality	269
4.2	The UMD property	281
4.2.a	Definition and basic properties	281
4.2.b	Unconditionality of the Haar decomposition	286
4.2.c	Examples and constructions	290
4.2.d	Stein's inequality for conditional expectations	298
4.2.e	Boundedness of martingale transforms	300
4.3	Banach space properties implied by UMD	302
4.3.a	Reflexivity	302
4.3.b	Further Banach space properties implied by UMD	309
4.3.c	Qiu's example	313
4.4	Decoupling and tangency	319
4.4.a	Elementary decoupling	319
4.4.b	Tangent sequences	321
4.5	Burkholder functions and sharp UMD constants	330
4.5.a	Concave functions	330
4.5.b	Burkholder's theorem	332
4.5.c	Optimal constants for the real line	337
4.5.d	Differential subordination	345
4.6	Notes	354
5	Hilbert transform and Littlewood–Paley theory	373
5.1	The Hilbert transform as a singular integral	374
5.1.a	Dyadic shifts and their averages	375
5.1.b	The Hilbert transform from the dyadic shifts	384
5.2	Fourier analysis of the Hilbert transform	387
5.2.a	The Hilbert transform via the Fourier transform	388
5.2.b	Periodic Hilbert transform and Fourier series	390
5.2.c	Necessity of the UMD condition	395
5.3	Fourier multipliers	399
5.3.a	General theory	400
5.3.b	R -boundedness: a necessary condition for multipliers	407
5.3.c	Mihlin's multiplier theorem on $\mathbb{R}$	409
5.3.d	Littlewood–Paley inequalities on $\mathbb{R}$	418
5.4	Applications to analysis in the Schatten classes	420
5.4.a	The UMD property of the Schatten classes	420
5.4.b	Schur multipliers and transference on $\mathcal{C}^p$	423
5.4.c	Operator Lipschitz functions	427
5.5	Fourier multipliers on $\mathbb{R}^d$	430
5.5.a	Riesz transforms and other liftings from $\mathbb{R}$	430
5.5.b	Mihlin's multiplier theorem on $\mathbb{R}^d$	435
5.5.c	Littlewood–Paley inequalities on $\mathbb{R}^d$	443

5.6	Applications to Sobolev spaces	448
5.6.a	Bessel potential spaces	448
5.6.b	Complex interpolation of Bessel potential spaces	452
5.6.c	Coincidence of Sobolev and Bessel potential spaces	453
5.7	Transference and Fourier multipliers on $\mathbb{T}^d$	457
5.7.a	Transference from $\mathbb{R}^d$ to $\mathbb{T}^d$	458
5.7.b	Transference from $\mathbb{T}^d$ to $\mathbb{R}^d$	460
5.7.c	Periodic multiplier theorems	463
5.8	Notes	469
O	Open problems	493
A	Measure theory	501
A.1	Measure spaces	501
A.1.a	Basic definitions	501
A.1.b	The structure of sub- σ -algebras	504
A.1.c	Divisibility	505
A.2	Convergence in measure	510
A.3	Uniform integrability	512
A.4	Notes	515
B	Banach spaces	517
B.1	Duality	517
B.1.a	Hahn–Banach theorems	517
B.1.b	Weak topologies	520
B.1.c	Reflexivity	526
B.2	Bounded linear operators	526
B.3	Holomorphic mappings	529
B.4	Complexification	530
B.5	Notes	533
C	Interpolation theory	537
C.1	Interpolation couples	537
C.2	Complex interpolation	538
C.3	Real interpolation	545
C.4	Complex versus real	559
C.5	Notes	562
D	Schatten classes	565
D.1	Approximation numbers and Schatten classes	565
D.2	Hölder’s inequality and duality	570
D.3	Interpolation	574
D.4	Notes	575
	References	577
	Index	605
