Analysis in Banach Spaces

Volume II: Probabilistic Methods and
Operator Theory

Contents

6	Random sums	1
6.1	Basic notions and estimates	2
6.1.a	Symmetric random variables and randomisation	4
6.1.b	Kahane's contraction principle	9
6.1.c	Norm comparison of different random sums	10
6.1.d	Covariance domination for Gaussian sums	15
6.2	Comparison of different L^p -norms	17
6.2.a	The discrete heat semigroup and hypercontractivity	18
6.2.b	Kahane–Khinchine inequalities	21
6.2.c	End-point bounds related to $p = 0$ and $q = \infty$	24
6.3	The random sequence spaces $\varepsilon^p(X)$ and $\gamma^p(X)$	26
6.3.a	Coincidence with square function spaces when $X = L^q$	28
6.3.b	Dual and bi-dual of $\varepsilon_N^p(X)$ and $\gamma_N^p(X)$	29
6.4	Convergence of random series	33
6.4.a	Itô–Nisio equivalence of different modes of convergence	33
6.4.b	Boundedness implies convergence if and only if $c_0 \not\subseteq X$	39
6.5	Comparison of random sums and trigonometric sums	42
6.6	Notes	46
7	Type, cotype, and related properties	53
7.1	Type and cotype	54
7.1.a	Definitions and basic properties	54
7.1.b	Basic examples	56
7.1.c	Type implies cotype	63
7.1.d	Type and cotype for general random sequences	66
7.1.e	Extremality of Gaussians in (co)type 2 spaces	69
7.2	Comparison theorems under finite cotype	73
7.2.a	Summing operators	74
7.2.b	Pisier's factorisation theorem	75
7.2.c	Contraction principle with function coefficients	79
7.2.d	Equivalence of cotype and Gaussian cotype	81

7.2.e	Finite cotype in Banach lattices	85
7.3	Geometric characterisations	88
7.3.a	Kwapień's characterisation of type and cotype 2	89
7.3.b	Maurey–Pisier characterisation of non-trivial (co)type	96
7.4	K -convexity	109
7.4.a	Definition and basic properties	109
7.4.b	K -convexity and type	114
7.4.c	K -convexity and duality of the spaces $\varepsilon_N^p(X)$	115
7.4.d	K -convexity and interpolation	118
7.4.e	K -convexity with respect to general random variables	120
7.4.f	Equivalence of K -convexity and non-trivial type	123
7.5	Contraction principles for double random sums	129
7.5.a	Pisier's contraction property	130
7.5.b	The triangular contraction property	136
7.5.c	Duality and interpolation	140
7.5.d	Gaussian version of Pisier's contraction property	142
7.5.e	Double random sums in Banach lattices	145
7.6	Notes	146
8	R-boundedness	163
8.1	Basic theory	164
8.1.a	Definition and comparison with related notions	164
8.1.b	Testing R -boundedness with distinct operators	168
8.1.c	First examples: multiplication and averaging operators	170
8.1.d	R -boundedness versus boundedness on $\varepsilon_N^p(X)$	177
8.1.e	Stability of R -boundedness under set operations	178
8.2	Sources of R -boundedness in real analysis	183
8.2.a	Pointwise domination by the maximal operator	183
8.2.b	Inequalities with Muckenhoupt weights	185
8.2.c	Characterisation by weighted inequalities in L^p	187
8.3	Fourier multipliers and R -boundedness	192
8.3.a	Multipliers of bounded variation on the line	192
8.3.b	The Marcinkiewicz multiplier theorem on the line	197
8.3.c	Multipliers of bounded rectangular variation	200
8.3.d	The product-space multiplier theorem	205
8.3.e	Necessity of Pisier's contraction property	209
8.4	Sources of R -boundedness in operator theory	211
8.4.a	Duality and interpolation	211
8.4.b	Unconditionality	214
8.5	Integral means and smooth functions	217
8.5.a	Integral means I: elementary estimates	217
8.5.b	The range of differentiable and holomorphic functions	221
8.5.c	Integral means II: the effect of type and cotype	225
8.5.d	The range of functions of fractional smoothness	231
8.6	Coincidence of R -boundedness with other notions	234

8.6.a	Coincidence with boundedness implies (co)type 2	234
8.6.b	Coincidence with γ -boundedness implies finite cotype . .	237
8.7	Notes	241
9	Square functions and radonifying operators	251
9.1	Radonifying operators	252
9.1.a	Heuristics	252
9.1.b	The operator spaces $\gamma_\infty(H, X)$ and $\gamma(H, X)$	254
9.1.c	The ideal property	260
9.1.d	Convergence results	261
9.1.e	Coincidence $\gamma_\infty(H, X) = \gamma(H, X)$ when $c_0 \not\subseteq X$	265
9.1.f	Trace duality	267
9.1.g	Interpolation	269
9.1.h	The indefinite integral and Brownian motion	271
9.2	Functions representing a γ -radonifying operator	275
9.2.a	Definitions and basic properties	275
9.2.b	Square integrability versus γ -radonification	278
9.2.c	Trace duality and the γ -Hölder inequality	282
9.3	Square function characterisations	284
9.3.a	Square functions in L^p -spaces	284
9.3.b	Square functions in Banach function spaces	287
9.4	Function space properties	293
9.4.a	Convergence theorems	293
9.4.b	Fubini-type theorems	296
9.4.c	Partitions, type and cotype	298
9.5	The γ -multiplier theorem	299
9.5.a	Sufficient conditions for pointwise multiplication	300
9.5.b	Necessity of γ -boundedness	303
9.6	Extension theorems	308
9.6.a	General extension results	308
9.6.b	R -bounded extensions via Pisier's contraction property .	311
9.6.c	R -bounded extensions via type and cotype	314
9.7	Function space embeddings	320
9.7.a	Embedding Sobolev spaces	321
9.7.b	Embedding Hölder spaces	326
9.7.c	Embeddings involving holomorphic functions	329
9.7.d	Hilbert sequences	337
9.8	Notes	345
10	The H^∞-functional calculus	359
10.1	Sectorial operators	360
10.1.a	Examples	362
10.1.b	Basic properties	364
10.2	Construction of the H^∞ -calculus	368
10.2.a	The Dunford calculus	369

10.2.b	The H^∞ -calculus	379
10.2.c	First examples	388
10.3	R -boundedness of the H^∞ -calculus	398
10.3.a	R -sectoriality	399
10.3.b	The main R -boundedness result	401
10.3.c	Unconditional decompositions associated with A	404
10.3.d	Proof of the main result	406
10.4	Square functions and H^∞ -calculus	413
10.4.a	Discrete square functions	414
10.4.b	Continuous square functions	422
10.4.c	The quadratic H^∞ -calculus	432
10.4.d	Le Merdy's theorem on the angle of the H^∞ -calculus	435
10.5	Necessity of UMD and Pisier's contraction property	440
10.6	The bisectorial H^∞ -calculus	446
10.6.a	Bisectorial operators	446
10.6.b	Basic theory of the bisectorial calculus	449
10.7	Functional calculus for (semi)group generators	451
10.7.a	The Phillips calculus	452
10.7.b	Coifman–Weiss transference theorems	456
10.7.c	Hieber–Prüss theorems on H^∞ -calculus for generators	461
10.7.d	Analytic semigroups of positive contractions on L^p	462
10.8	Notes	468
P	Problems	479
E	Probability theory	487
E.1	Random variables	487
E.1.a	Modes of convergence	488
E.1.b	Independence	491
E.1.c	Characteristic functions	493
E.2	Gaussian variables	495
E.2.a	Multivariate Gaussian variables	498
E.2.b	The central limit theorem	502
E.2.c	The maximum of Gaussian variables	505
E.3	Notes	509
F	Banach lattices	511
F.1	Definitions and basic properties	511
F.2	The Krivine calculus	512
F.3	Lorentz spaces	514
F.4	Notes	517

G	Semigroups of linear operators	519
G.1	Unbounded linear operators	519
G.2	C_0 -semigroups	523
G.3	The inhomogeneous abstract Cauchy problem	531
G.4	The Hille–Yosida theorem	532
G.5	Analytic semigroups	536
G.6	Stone’s theorem	543
G.7	Notes	545
H	Hardy spaces of holomorphic functions	549
H.1	Hardy spaces on a strip	549
H.2	Hardy spaces on a sector	552
H.3	The Franks–McIntosh decomposition	553
H.4	Notes	559
I	Akcoglu’s theory of positive contractions on L^p	561
I.1	Isometric dilations	561
I.2	Maximal ergodic averages	569
I.3	Notes	574
J	Muckenhoupt weights	577
J.1	Weighted boundedness of the maximal operator	577
J.2	Rubio de Francia’s weighted extrapolation theorem	579
J.3	Notes	583
	References	585
