Preface

The plan to write this book was laid out in April 1987 at Oberwolfach, during the Conference “Reelle Algebraische Geometrie”. Afterwards we met at various conferences and seminars in Luminy, Madrid, Münster, Oberwolfach, Segovia, Soesterberg, Trento and La Turballe. We would like to thank the organizers and the institutions which supported these meetings. With pleasure we remember the special year on Real Algebraic Geometry and Quadratic Forms (Ragsquad) in Berkeley 1990/91 where an essential part of this book was written. Thanks to T.Y. Lam and R. Robson.

We are indebted to our Departments: Universidad Complutense de Madrid and Westfälische Wilhelms-Universität Münster, as well as the D.A.A.D. and the D.G.I.C.Y.T..

It is not possible to mention here all colleagues and friends who showed permanent interest in the project. They encouraged us to continue and complete this work. In particular, we are obliged to Jacek Bochnak, Mike Buchner, Michel Coste and Claus Scheiderer for proofreading and helpful suggestions. While the work was still in progress, Manfred Knebusch used parts of our manuscript for a course on Real Algebraic Geometry. His experience convinced us that it was worth pursuing a fully abstract approach. We were also in permanent contact with Murray Marshall, and the reader will recognize the mutual influence of ideas.

We are also indebted to Professor Reinhold Remmert and to the Springer-Verlag for publishing the book in this series.

Finally, we thank Erika Becker for her care in converting many pages of handwritten mathematics into beautiful $\text{T}_{\text{E}}\text{X}$.

Madrid, Münster, Majadahonda
March 1996

C. Andradas, L. Bröcker, J. M. Ruiz

Contents

Introduction	1
Chapter I. A First Look at Semialgebraic Geometry	5
1. Real Closed Fields and Transfer Principles	5
2. What is Semialgebraic Geometry?	9
3. Real Spaces	11
4. Examples	21
Chapter II. Real Algebra	29
1. The Real Spectrum of a Ring	29
2. Specializations, Zero Sets and Real Ideals	35
3. Real Valuations	38
4. Real Going-Up and Real Going-Down	43
5. Abstract Semialgebraic Functions	46
6. Cylindrical Decomposition	51
7. Real Strict Localization	53
Notes	59
Chapter III. Spaces of Signs	61
1. The Axioms	61
2. Forms	68
3. SAP-Spaces and Fans	71
4. Local Spaces of Signs	76
5. The Space of Signs of a Ring	79
6. Subspaces	82
Notes	83
Chapter IV. Spaces of Orderings	85
1. The Axioms Revisited	85
2. Basic Constructions	89

3. Spaces of Finite Type	95
4. Spaces of Finite Chain Length	98
5. Finite Type = Finite Chain Length	105
6. Local-Global Principles	111
7. Representation Theorem and Invariants	115
Notes	122

Chapter V. The Main Results

1. Stability Formulae	125
2. Complexity of Constructible Sets	129
3. Separation	134
4. Real Divisors	135
5. The Artin-Lang Property	139
Notes	143

Chapter VI. Spaces of Signs of Rings

1. Fans and Valuations	145
2. Field Extensions: Upper Bounds	150
3. Field Extensions: Lower Bounds	154
4. Algebras	158
5. Algebras Finitely Generated over Fields	161
6. Archimedean Rings	164
7. Coming Back to Geometry	168
Notes	176

Chapter VII. Real Algebra of Excellent Rings

1. Regular Homomorphisms	177
2. Excellent Rings	182
3. Extension of Orderings Under Completion	187
4. Curve Selection Lemma	189
5. Dimension, Valuations and Fans	195
6. Closures of Constructible Sets	198
7. Real Going-down for Regular Homomorphisms	201
8. Connected Components of Constructible Sets	204
Notes	209

Chapter VIII. Real Analytic Geometry

1. Semianalytic Sets	211
2. Semianalytic Set Germs	213
3. Cylindrical Decomposition of Germs	219

4. Rings of Global Analytic Functions	224
5. Hilbert's 17th Problem and Real Nullstellensatz	229
6. Minimal Generation of Global Semianalytic Sets	234
7. Topology of Global Semianalytic Sets	240
8. Germs at Compact Sets	244
Notes	252
Bibliography	255
Glossary	265
Index	267
