<i>Preface</i>	ix
<b>1 Introduction</b>	1
<b>2 Euler and beyond</b>	5
2.1 Set terminology	5
2.2 Bijective proofs of partition identities	6
2.3 A bijection for Euler's identity	8
2.4 Euler pairs	10
<b>3 Ferrers graphs</b>	14
3.1 Ferrers graphs and Ferrers boards	15
3.2 Conjugate partitions	16
3.3 An upper bound on $p(n)$	19
3.4 Bressoud's beautiful bijection	23
3.5 Euler's pentagonal number theorem	24
<b>4 The Rogers-Ramanujan identities</b>	29
4.1 A fundamental type of partition identity	29
4.2 Discovering the first Rogers-Ramanujan identity	31
4.3 Alder's conjecture	33
4.4 Schur's theorem	35
4.5 Looking for a bijective proof of the first Rogers-Ramanujan identity	39
4.6 The impact of the Rogers-Ramanujan identities	41
<b>5 Generating functions</b>	42
5.1 Generating functions as products	42
5.2 Euler's theorem	47
5.3 Two variable-generating functions	48
5.4 Euler's pentagonal number theorem	49

5.5	Congruences for $p(n)$	51
5.6	Rogers-Ramanujan revisited	52
<b>6</b>	<b>Formulas for partition functions</b>	<b>55</b>
6.1	Formula for $p(n, 1)$ and $p(n, 2)$	55
6.2	A formula for $p(n, 3)$	57
6.3	A formula for $p(n, 4)$	58
6.4	$\lim_{n \rightarrow \infty} p(n)^{1/n} = 1$	61
<b>7</b>	<b>Gaussian polynomials</b>	<b>64</b>
7.1	Properties of the binomial numbers	64
7.2	Lattice paths and the $q$ -binomial numbers	67
7.3	The $q$ -binomial theorem and the $q$ -binomial series	69
7.4	Gaussian polynomial identities	71
7.5	Limiting values of Gaussian polynomials	74
<b>8</b>	<b>Durfee squares</b>	<b>75</b>
8.1	Durfee squares and generating functions	75
8.2	Frobenius symbols	78
8.3	Jacobi's triple product identity	79
8.4	The Rogers-Ramanujan identities	81
8.5	Successive Durfee squares	85
<b>9</b>	<b>Euler refined</b>	<b>88</b>
9.1	Sylvester's refinement of Euler	88
9.2	Fine's refinement	90
9.3	Lecture hall partitions	92
<b>10</b>	<b>Plane partitions</b>	<b>99</b>
10.1	Ferrers graphs and rhombus tilings	99
10.2	MacMahon's formulas	101
10.3	The formula for $\pi_r(h, j_i; q)$	103
<b>11</b>	<b>Growing Ferrers boards</b>	<b>106</b>
11.1	Random partitions	106
11.2	Posets of partitions	107
11.3	The hook length formula	110
11.4	Randomly growing Ferrers boards	113
11.5	Domino tilings	115
11.6	The arctic circle theorem	116
<b>12</b>	<b>Musings</b>	<b>121</b>
12.1	What have we left out?	121
12.2	Where can you go to undertake new explorations?	123
12.3	Where can one study the history of partitions?	124
12.4	Are there any unsolved problems left?	125

Cambridge University Press  
978-0-521-60090-3 - Integer Partitions

---

	<i>Contents</i>	vii
<b>A</b>	<b>On the convergence of infinite series and products</b>	126
<b>B</b>	<b>References</b>	129
<b>C</b>	<b>Solutions and hints to selected exercises</b>	132
	<i>Index</i>	139
