Contents

Introduction 1

1. Equations and relations in inverse and ill-posed problems 3
1.1 General approach in a theory of multidimensional inverse problems 3
1.2 Control and inverse problems 6
1.3 Generating functions, evolution equations, and inverse problems 9
1.4 Algebraic questions on the theory of multidimensional inverse problems for nonlinear evolution equations 13
1.5 Inverse problem for the Maxwell equation 19

2. Formulas in inverse problems for evolution equations of the general type 22
2.1 Inverse problem. Formal results 22
2.2 Sufficient conditions for correctness of the formulas (2.3), (2.4) 24
2.3 The formulas for solution of the inverse problem in bounded domain 27
2.4 Formulas in the inverse problem for a general evolution equation of the second order 30
2.5 Reduction of multidimensional inverse problems to initial-boundary value problems in Hilbert spaces 33
2.6 Reduction of more common inverse problems to initial-boundary value problems 54
2.7 Formulas in problems of determination of sources 60

3. Formulas in inverse problems for the kinematic problems in seismology 66
3.1 Inverse kinematic problem. Some relations 66
3.2 Formulas for the ray and time 67
3.3 Integro-differential relations and the first integrals 71
3.4 Linear first integral 73
3.5 Quadratic first integral 75
3.6 Generalization of the Herglotz formula 77
3.7 Integro-differential identities in the plane 88
3.8 Determination of the Riemann metric of a special form 97
3.9 The problem associated with an equation for geodesics of the Liouville metric 100
3.10 Determination of a homogeneous functional 103

4. Formulas in integral geometry and tomography 107
4.1 Tomography and inverse problems for kinetic equations 107
4.2 Inversion formulas in integral geometry 108
4.3 An inversion formula in a problem of integral geometry on the sphere . . . 110
4.4 An estimate in a problem of integral geometry 112

Materiale protetto da copyright

4.5 A Radon transformation with variable attenuation 114
4.6 Some relations in tomography 116
4.7 Relations associated with integral geometry 118
4.8 Uniqueness theorems for the inverse problems of kinematic and integral geometry 119

5. The analytical representation of solutions of some inverse and ill-posed problems 139
5.1 Analytical representation solutions of inverse problems for parabolic and kinetic equations 139
5.2 Nonlinear equations and inverse problems 143
5.3 Formulas for solution and coefficients of differential equations of the second order 151
5.4 Formulas for solution of inverse problems for evolution equations in convolution 158
5.5 The operator function method and inverse problems 159

6. Mathematical models in the problems of ethnogeny and evolution of populations 163
6.1 Equations encountered in ecology 163
6.2 Formulas and equations in inverse problems for general evolution equations 169
6.3 Inverse problems for evolution equations of the theory of populations . . . 171
6.4 On mathematical modelling of ethnic processes 174
6.5 Formulas for solutions and coefficients in nonlinear equations 185
