Nonlinear Problems of Elasticity

Antman, S.

2005, XVIII, 838 p. 110 illus., Hardcover

ISBN: 978-0-387-20880-0

Contents

Preface	vii
Chapter 1. Background	1
1. Notational and Terminological Conventions	1
2. Prerequisites	2
3. Functions	2
4. Vectors	4
5. Differential Equations	7
6. Notation for Sets	8
7. Real-Variable Theory	9
8. Function Spaces	10
Chapter 2. The Equations of Motion for Extensible Strings	13
1. Introduction	13
2. The Classical Equations of Motion	14
3. The Linear Impulse-Momentum Law	25
4. The Equivalence of the Linear Impulse-Momentum Law with the Principle of Virtual Power	28
5. Jump Conditions	31
6. The Existence of a Straight Equilibrium State	33
7. Purely Transverse Motions	35
8. Perturbation Methods and the Linear Wave Equation	37
9. The Justification of Perturbation Methods	43
10. Variational Characterization of the Equations	46
11. Discretization	11
Chapter 3. Elementary Problems for Elastic Strings	53
1. Introduction	53
2. Equilibrium of Strings Under Vertical Loads	54
3. The Catenary Problem	57
4. The Suspension Bridge Problem	69
5. Equilibrium of Strings under Normal Loads	71
6. Equilibrium of Strings Under Central Forces	79
7. Circular States of a Spinning String	82
8. Travelling Waves	83
9. Radial Oscillations	85
10. Combined Whirling and Radial Motions	86
11. Massless Springs	86

12. Comments and Historical Notes	92
Chapter 4. Planar Steady-State Problems for Elastic Rods	93
1. Formulation of the Governing Equations	93
2. Planar Equilibrium States of Straight Rods under Terminal Loads	104
3. Equilibrium of Rings under Hydrostatic Pressure	109
4. Asymptotic Shape of Inflated Rings	118
5. Straight Configurations of a Whirling Rod	124
6. Simultaneous Whirling and Breathing Oscillations of a Ring	131
7. Bibliographical Notes	132
Chapter 5. Introduction to Bifurcation Theory and its Applications to Elasticity	133
1. The Simplest Buckling Problem	133
2. Classical Buckling Problems of Elasticity	139
3. Mathematical Concepts and Examples	146
4. Basic Theorems of Bifurcation Theory	157
5. Applications of the Basic Theorems to the Simplest Buckling Problem	165
6. Perturbation Methods	171
7. Dynamics and Stability	176
8. Bibliographical Notes	179
Chapter 6. Global Bifurcation Problems for Strings and Rods	179
1. The Equations for the Steady Whirling of Strings	179
2. Kolodner's Problem	182
3. Other Problems for Whirling Strings	191
4. The Drawing and Whirling of Strings	196
5. Planar Buckling of Rods. Global Theory	202
6. Planar Buckling of Rods. Imperfection Sensitivity via Singularity Theory	205
7. Planar Buckling of Rods. Constitutive Assumptions	209
8. Planar Buckling of Rods. Nonbifurcating Branches	212
9. Global Disposition of Solution Sheets	214
10. Other Planar Buckling Problems for Straight Rods	219
11. Follower Loads	221
12. Buckling of Arches	223
13. Buckling of Whirling Rods	227
Chapter 7. Variational Methods	231
1. Introduction	231
2. The Multiplier Rule	234
3. Direct Methods	238
4. The Bootstrap Method	245
5. Inflation Problems	249
6. Problems for Whirling Rods	255

7. The Second Variation. Bifurcation Problems	257
8. Notes	260
Chapter 8. Theory of Rods Deforming in Space	261
1. Introduction	261
2. Outline of the Essential Theory	262
3. The Exact Equations of Motion	268
4. The Equations of Constrained Motion	272
5. The Use of Exact Momenta	275
6. The Strains and the Strain-Rates	276
7. The Preservation of Orientation	279
8. Constitutive Equations Invariant under Rigid Motions	284
9. Invariant Dissipative Mechanisms for Numerical Schemes	289
10. Monotonicity and Growth Conditions	294
11. Transverse Hemitropy and Isotropy	300
12. Uniform Rods. Singular Problems	309
13. Representations for the Directors in Terms of Euler Angles	311
14. Boundary Conditions	313
15. Impulse-Momentum Laws and the Principle of Virtual Power	319
16. Hamilton's Principle for Hyperelastic Rods	323
17. Material Constraints	324
18. Planar Motions	327
19. Classical Theories	329
20. General Theories of Cosserat Rods	332
21. Historical and Bibliographical Notes	333
Chapter 9. Spatial Problems for Rods	335
1. Summary of the Governing Equations	335
2. Kirchhoff's Problem for Helical Equilibrium States	337
3. General Solutions for Equilibria	340
4. Travelling Waves in Straight Rods	344
5. Buckling under Terminal Thrust and Torque	347
6. Lateral Instability	349
Chapter 10. Axisymmetric Equilibria of Shells	353
1. Formulation of the Governing Equations	353
2. Buckling of a Transversely Isotropic Circular Plate	359
3. Remarkable Trivial States of Aeolotropic Circular Plates	366
4. Buckling of Aeolotropic Plates	373
5. Buckling of Spherical Shells	375
6. Buckling of Cylindrical Shells	379
7. Asymptotic Shape of Inflated Shells	380
8. Membranes	381
9. Eversion	383

Chapter 11. Tensors	389
1. Tensor Algebra	389
2. Tensor Calculus	398
3. Indicical Notation	404
Chapter 12. 3-Dimensional Continuum Mechanics	407
1. Kinematics	407
2. Strain	409
3. Compatibility	413
4. Rotation	416
5. Examples	418
6. Mass and Density	422
7. Stress and the Equations of Motion	423
8. Boundary and Initial Conditions	430
9. Impulse-Momentum Laws and the Principle of Virtual Power	433
10. Constitutive Equations of Mechanics	439
11. Invariance under Rigid Motions	441
12. Material Constraints	445
13. Isotropy	458
14. Thermomechanics	463
15. The Spatial Formulation	473
Chapter 13. 3-Dimensional Theory of Nonlinear Elasticity	479
1. Summary of the Governing Equations	479
2. Constitutive Restrictions	481
3. Order-Preservation: Monotonicity and Ellipticity	482
4. Growth Conditions	490
5. Special Constitutive Equations	491
6. Existence and Regularity	492
7. Versions of the Euler-Lagrange Equations	493
8. Linear Elasticity	497
9. Viscous Dissipation	499
Chapter 14. Problems in Nonlinear Elasticity	501
1. Elementary Static Problems in Cartesian Coordinates	501
2. Torsion, Extension, Inflation, and Shear of an Annular Sector	503
3. Torsion and Related Equilibrium Problems for Incompressible Bodies	507
4. Torsion, Extension, Inflation, and Shear of a Compressible Annular Sector	511
5. Flexure, Extension, and Shear of a Block	514
6. Flexure, Extension, and Shear of a Compressible Block	516
7. Dilatation, Cavitation, Inflation, and Eversion	522
8. Other Semi-Inverse Problems	537
9. Universal and Non-Universal Deformations	540

10. Antiplane Problems	543
11. Perturbation Methods	545
12. Instability of an Incompressible Body under Constant Normal Traction	556
13. Radial Motions of an Incompressible Tube	560
14. Universal Motions of Incompressible Bodies	562
15. Standing Shear Waves in an Incompressible Layer	567
16. Commentary. Other Problems	570
Chapter 15. Large-Strain Plasticity	571
1. Constitutive Equations	571
2. Refinements and Generalizations	577
3. Example: Longitudinal Motion of a Bar	579
4. Antiplane Shearing Motions	581
5. Notes	585
Chapter 16. General Theories of Rods	587
1. Introduction	587
2. Curvilinear Coordinates	589
3. Geometry of Rod-like Bodies	592
4. Exact Equations of Motion	593
5. Semi-Intrinsic Theories	594
6. Induced Theories of Rods	595
7. Convergence	604
8. Rods with Two Directors	607
9. Elastic Rods	615
10. Elastic Rods with a Plane of Symmetry	619
11. Necking	624
12. The Treatment of Incompressibility	628
13. Intrinsic Theories of Rods	636
14. Mielke's Treatment of St. Venant's Principle	638
Chapter 17. General Theories of Shells	643
1. Induced Shell Theories	643
2. Shells with One Director	647
3. Drawing and Twisting of an Elastic Plate	653
4. Axisymmetric Motions of Axisymmetric Shells	657
5. Global Buckled States of a Cosserat Plate	663
6. Thickness parameter. Eversion	666
7. The Treatment of Incompressibility	668
8. Intrinsic Theory of Special Cosserat Shells	669
9. Membranes	680
10. Asymptotic Methods. The von Kármán Equations	682
11. Justification of Shell Theories as Asymptotic Limits	687
12. Commentary. Historical Notes	690
Chapter 18. Dynamical Problems	693
1. The 1-Dimensional Quasilinear Wave Equation	693
2. The Riemann Problem. Uniqueness and Admissibility of Weak Solutions	697

3. Shearing Motions of Viscoplastic Layers	704
4. Dissipative Mechanisms and the Bounds They Induce	705
5. Shock Structure. Admissibility and Travelling Waves	715
6. Travelling Shear Waves in Viscoelastic Media	720
7. Blow-up in Three-Dimensional Hyperelasticity	727
Chapter 19. Appendix. Topics in Linear Analysis	733
1. Banach Spaces	733
2. Linear Operators and Linear Equations	736
Chapter 20. Appendix. Local Nonlinear Analysis	741
1. The Contraction Mapping Principle and the Implicit Function Theorem	741
2. The Lyapunov-Schmidt Method. The Poincaré Shooting Method	744
Chapter 21. Appendix. Degree Theory and its Applications	747
1. Definition of the Brouwer Degree	747
2. Properties of the Brouwer Degree	751
3. Leray-Schauder Degree	757
4. One-Parameter Global Bifurcation Theorem	761
References	763
