Introduction	1
Chapter 1. Classical Volterra equations of the first kind	5
1.1. Classification of integral Volterra equations of the fist kind	5
1.2. The Gronwall–Bellman lemma	10
1.3. A difference analog of the Gronwall–Bellman lemma	14
1.4. Self-regularization	17
1.5. Two-parametric (α, h) -regularization	19
1.6. Inequalities with isotone operators	32
1.7. Inequalities with interchangeable isotone operators	39
1.8. Unimprovable estimates of solutions of multidimensional integral inequalities	43
1.9. The well-posedness of a two-dimensional Volterra equation of the first kind	49
1.10. Unimprovable estimates of solutions of two-dimensional differ- ence inequalities	51
Chapter 2. Volterra equations of the first kind with two variable integration limits. The case $a(t_0) < t_0$	57
2.1. Problem statement	57
2.2. The method of steps	58
2.3. Illustrative examples	62
2.4. The existence and uniqueness theorem	65
2.5. An estimate of the solution stability	68
2.6. The study of a special problem of mathematical programming . .	70

2.7. A numerical solution of the test example	79
2.8. A geometrical illustration of the reduction by unity in the order of convergence	81
2.9. A theorem on the convergence of the quadrature method (the general case)	84
2.10. Some numerical results	90
2.11. On self-regularization	96
Chapter 3. Volterra equations of the first kind with two variable limits of integration. The case $a(t_0) = t_0$	99
3.1. Problem statement	99
3.2. Solution of the simplest test equation	100
3.3. Existence and uniqueness theorem (the general case)	102
3.4. Estimation of the solution stability	104
3.5. Some generalizations of the Gronwall–Bellman inequality	107
3.6. Numerical solution of a test example	114
3.7. The proof of convergence for the quadrature method (the general case)	118
3.8. Some numerical results	124
3.9. Self-regularization (the case of a disturbance in the right-hand side)	126
3.10. Stability of a numerical solution with respect to disturbances of $a(t)$	128
3.11. Multidimensional Volterra equations of the first kind related to the modelling of nonlinear dynamic systems using the Volterra series	130
