# Contents

<b>Introduction .....</b>	xi
<b>1 Operators and Equations .....</b>	1
1.1 Operators on linear spaces .....	1
1.2 Divided differences of operators .....	9
1.3 Fixed points of operators .....	25
1.4 Exercises .....	29
<b>2 The Newton-Kantorovich (NK) Method .....</b>	41
2.1 Linearization of equations .....	41
2.2 Semilocal convergence of the NK method .....	42
2.3 New sufficient conditions for the secant method .....	54
2.4 Concerning the “terra incognita” between convergence regions of two Newton methods .....	62
2.5 Enlarging the convergence domain of the NK method under regular smoothness conditions .....	75
2.6 Convergence of NK method and operators with values in a cone ..	80
2.7 Convergence theorems involving center-Lipschitz conditions .....	84
2.8 The radius of convergence for the NK method.....	90
2.9 On a weak NK method .....	102
2.10 Bounds on manifolds .....	103
2.11 The radius of convergence and one-parameter operator embedding ..	106
2.12 NK method and Riemannian manifolds .....	110
2.13 Computation of shadowing orbits .....	113
2.14 Computation of continuation curves .....	116
2.15 Gauss-Newton method .....	121
2.16 Exercises .....	125
<b>3 Applications of the Weaker Version of the NK Theorem .....</b>	133
3.1 Comparison of Kantorovich and Moore theorems .....	133
3.2 Comparison of Kantorovich and Miranda theorems .....	137

3.3	The secant method and nonsmooth equations . . . . .	142
3.4	Improvements on curve tracing of the homotopy method . . . . .	153
3.5	Nonlinear finite element analysis . . . . .	157
3.6	Convergence of the structured PSB update in Hilbert space . . . . .	162
3.7	On the shadowing lemma for operators with chaotic behavior . . . . .	166
3.8	The mesh independence principle and optimal shape design problems . . . . .	170
3.9	The conditioning of semidefinite programs . . . . .	180
3.10	Exercises . . . . .	186
<b>4</b>	<b>Special Methods . . . . .</b>	<b>193</b>
4.1	Broyden's method . . . . .	193
4.2	Stirling's method . . . . .	202
4.3	Steffensen's method . . . . .	207
4.4	Computing zeros of operator satisfying autonomous differential equations . . . . .	215
4.5	The method of tangent hyperbolas . . . . .	219
4.6	A modified secant method and function optimization . . . . .	230
4.7	Local convergence of a King-Werner-type method . . . . .	233
4.8	Secant-type methods . . . . .	235
4.9	Exercises . . . . .	239
<b>5</b>	<b>Newton-like Methods . . . . .</b>	<b>261</b>
5.1	Newton-like methods of “bounded deterioration” . . . . .	261
5.2	Weak conditions for the convergence of a certain class of iterative methods . . . . .	269
5.3	Unifying convergence analysis for two-point Newton methods . . . . .	275
5.4	On a two-point method of convergent order two . . . . .	290
5.5	Exercises . . . . .	304
<b>6</b>	<b>Analytic Computational Complexity: We Are Concerned with the Choice of Initial Approximations . . . . .</b>	<b>325</b>
6.1	The general problem . . . . .	325
6.2	Obtaining good starting points for Newton's method . . . . .	328
6.3	Exercises . . . . .	336
<b>7</b>	<b>Variational Inequalities . . . . .</b>	<b>339</b>
7.1	Variational inequalities and partially relaxed monotone mapping . . . . .	339
7.2	Monotonicity and solvability of nonlinear variational inequalities . . . . .	345
7.3	Generalized variational inequalities . . . . .	352
7.4	Semilocal convergence . . . . .	354
7.5	Results on generalized equations . . . . .	358
7.6	Semilocal convergence for quasivariational inequalities . . . . .	362
7.7	Generalized equations in Hilbert space . . . . .	365
7.8	Exercises . . . . .	371

<b>8 Convergence Involving Operators with Outer or Generalized Inverses</b>	379
8.1 Convergence with no Lipschitz conditions .....	379
8.2 Exercises .....	388
<b>9 Convergence on Generalized Banach Spaces: Improving Error Bounds and Weakening of Convergence Conditions</b>	395
9.1 $K$ -normed spaces .....	395
9.2 Generalized Banach spaces .....	408
9.3 Inexact Newton-like methods on Banach spaces with a convergence structure .....	417
9.4 Exercises .....	436
<b>10 Point-to-Set-Mappings</b>	445
10.1 Algorithmic models .....	445
10.2 A general convergence theorem .....	449
10.3 Convergence of $k$ -step methods .....	451
10.4 Convergence of single-step methods .....	454
10.5 Convergence of single-step methods with differentiable iteration functions .....	458
10.6 Monotone convergence .....	468
10.7 Exercises .....	471
<b>11 The Newton-Kantorovich Theorem and Mathematical Programming</b>	475
11.1 Case 1: Interior point methods .....	475
11.2 Case 2: LP methods .....	482
11.3 Exercises .....	489
<b>References</b>	493
<b>Glossary of Symbols</b>	503
<b>Index</b>	505
