Preface **vii**

Measures and Integration: An Informal Introduction **1**

1 Measures **9**
1.1 Classes of sets 9
1.2 Measures 14
1.3 The extension theorems and Lebesgue-Stieltjes measures . . 19
1.3.1 Caratheodory extension of measures 19
1.3.2 Lebesgue-Stieltjes measures on $\mathbb{R}$ 25
1.3.3 Lebesgue-Stieltjes measures on $\mathbb{R}^2$ 27
1.3.4 More on extension of measures 28
1.4 Completeness of measures 30
1.5 Problems 31

2 Integration **39**
2.1 Measurable transformations 39
2.2 Induced measures, distribution functions 44
2.2.1 Generalizations to higher dimensions 47
2.3 Integration 48
2.4 Riemann and Lebesgue integrals 59
2.5 More on convergence 61
2.6 Problems 71

3 L^p-Spaces **83**
3.1 Inequalities . . . 83
3.2 L^p-Spaces . . . 89
3.2.1 Basic properties . . . 89
3.2.2 Dual spaces . . . 93
3.3 Banach and Hilbert spaces . . . 94
3.3.1 Banach spaces . . . 94
3.3.2 Linear transformations . . . 96
3.3.3 Dual spaces . . . 97
3.3.4 Hilbert space . . . 98
3.4 Problems . . . 102

4 Differentiation **113**
4.1 The Lebesgue-Radon-Nikodym theorem . . . 113
4.2 Signed measures . . . 119
4.3 Functions of bounded variation . . . 125
4.4 Absolutely continuous functions on $\mathbb{R}$ . . . 128
4.5 Singular distributions . . . 133
4.5.1 Decomposition of a cdf . . . 133
4.5.2 Cantor ternary set . . . 134
4.5.3 Cantor ternary function . . . 136
4.6 Problems . . . 137

5 Product Measures, Convolutions, and Transforms **147**
5.1 Product spaces and product measures . . . 147
5.2 Fubini-Tonelli theorems . . . 152
5.3 Extensions to products of higher orders . . . 157
5.4 Convolutions . . . 160
5.4.1 Convolution of measures on $\big(\mathbb{R}, \mathcal{B}(\mathbb{R})\big)$ . . . 160
5.4.2 Convolution of sequences . . . 162
5.4.3 Convolution of functions in $L^1(\mathbb{R})$ . . . 162
5.4.4 Convolution of functions and measures . . . 164
5.5 Generating functions and Laplace transforms . . . 164
5.6 Fourier series . . . 166
5.7 Fourier transforms on $\mathbb{R}$ . . . 173
5.8 Plancherel transform . . . 178
5.9 Problems . . . 181

6 Probability Spaces **189**
6.1 Kolmogorov's probability model . . . 189
6.2 Random variables and random vectors . . . 191
6.3 Kolmogorov's consistency theorem . . . 199
6.4 Problems . . . 212

7 Independence **219**

7.1 Independent events and random variables 219
7.2 Borel-Cantelli lemmas, tail σ-algebras, and Kolmogorov's zero-one law 222
7.3 Problems 227

8 Laws of Large Numbers **237**
8.1 Weak laws of large numbers 237
8.2 Strong laws of large numbers 240
8.3 Series of independent random variables 249
8.4 Kolmogorov and Marcinkiewz-Zygmund SLLNs 254
8.5 Renewal theory 260
8.5.1 Definitions and basic properties 260
8.5.2 Wald's equation 262
8.5.3 The renewal theorems 264
8.5.4 Renewal equations 266
8.5.5 Applications 268
8.6 Ergodic theorems 271
8.6.1 Basic definitions and examples 271
8.6.2 Birkhoff's ergodic theorem 274
8.7 Law of the iterated logarithm 278
8.8 Problems 279

9 Convergence in Distribution **287**
9.1 Definitions and basic properties 287
9.2 Vague convergence, Helly-Bray theorems, and tightness . . 291
9.3 Weak convergence on metric spaces 299
9.4 Skorohod's theorem and the continuous mapping theorem . 303
9.5 The method of moments and the moment problem 306
9.5.1 Convergence of moments 306
9.5.2 The method of moments 307
9.5.3 The moment problem 307
9.6 Problems 309

10 Characteristic Functions **317**
10.1 Definition and examples 317
10.2 Inversion formulas 323
10.3 Levy-Cramer continuity theorem 327
10.4 Extension to $\mathbb{R}^k$ 332
10.5 Problems 337

11 Central Limit Theorems **343**
11.1 Lindeberg-Feller theorems 343
11.2 Stable distributions 352
11.3 Infinitely divisible distributions 358
11.4 Refinements and extensions of the CLT 361

11.4.1 The Berry-Esseen theorem 361
11.4.2 Edgeworth expansions 364
11.4.3 Large deviations 368
11.4.4 The functional central limit theorem 372
11.4.5 Empirical process and Brownian bridge 374
11.5 Problems 376

12 Conditional Expectation and Conditional Probability 383
12.1 Conditional expectation: Definitions and examples 383
12.2 Convergence theorems 389
12.3 Conditional probability 392
12.4 Problems 393

13 Discrete Parameter Martingales 399
13.1 Definitions and examples 399
13.2 Stopping times and optional stopping theorems 405
13.3 Martingale convergence theorems 417
13.4 Applications of martingale methods 424
13.4.1 Supercritical branching processes 424
13.4.2 Investment sequences 425
13.4.3 A conditional Borel-Cantelli lemma 425
13.4.4 Decomposition of probability measures 427
13.4.5 Kakutani's theorem 429
13.4.6 de Finetti's theorem 430
13.5 Problems 430

14 Markov Chains and MCMC 439
14.1 Markov chains: Countable state space 439
14.1.1 Definition 439
14.1.2 Examples 440
14.1.3 Existence of a Markov chain 442
14.1.4 Limit theory 443
14.2 Markov chains on a general state space 457
14.2.1 Basic definitions 457
14.2.2 Examples 458
14.2.3 Chapman-Kolmogorov equations 461
14.2.4 Harris irreducibility, recurrence, and minorization . . 462
14.2.5 The minorization theorem 464
14.2.6 The fundamental regeneration theorem 465
14.2.7 Limit theory for regenerative sequences 467
14.2.8 Limit theory of Harris recurrent Markov chains . . . 469
14.2.9 Markov chains on metric spaces 473
14.3 Markov chain Monte Carlo (MCMC) 477
14.3.1 Introduction 477
14.3.2 Metropolis-Hastings algorithm 478

14.3.3 The Gibbs sampler 480
14.4 Problems 481

15 Stochastic Processes **487**
15.1 Continuous time Markov chains 487
15.1.1 Definition 487
15.1.2 Kolmogorov's differential equations 488
15.1.3 Examples 489
15.1.4 Limit theorems 491
15.2 Brownian motion 493
15.2.1 Construction of SBM 493
15.2.2 Basic properties of SBM 495
15.2.3 Some related processes 498
15.2.4 Some limit theorems 498
15.2.5 Some sample path properties of SBM 499
15.2.6 Brownian motion and martingales 501
15.2.7 Some applications 502
15.2.8 The Black-Scholes formula for stock price option . . 503
15.3 Problems 504

16 Limit Theorems for Dependent Processes **509**
16.1 A central limit theorem for martingales 509
16.2 Mixing sequences 513
16.2.1 Mixing coefficients 514
16.2.2 Coupling and covariance inequalities 516
16.3 Central limit theorems for mixing sequences 519
16.4 Problems 529

17 The Bootstrap **533**
17.1 The bootstrap method for independent variables 533
17.1.1 A description of the bootstrap method 533
17.1.2 Validity of the bootstrap: Sample mean 535
17.1.3 Second order correctness of the bootstrap 536
17.1.4 Bootstrap for lattice distributions 537
17.1.5 Bootstrap for heavy tailed random variables 540
17.2 Inadequacy of resampling single values under dependence . 545
17.3 Block bootstrap 547
17.4 Properties of the MBB 548
17.4.1 Consistency of MBB variance estimators 549
17.4.2 Consistency of MBB cdf estimators 552
17.4.3 Second order properties of the MBB 554
17.5 Problems 556

18 Branching Processes **561**
18.1 Bienyeme-Galton-Watson branching process 562

18.2 BGW process: Multitype case 564
18.3 Continuous time branching processes 566
18.4 Embedding of Urn schemes in continuous time branching processes 568
18.5 Problems 569

A Advanced Calculus: A Review **573**
A.1 Elementary set theory 573
A.1.1 Set operations 574
A.1.2 The principle of induction 577
A.1.3 Equivalence relations 577
A.2 Real numbers, continuity, differentiability, and integration . 578
A.2.1 Real numbers 578
A.2.2 Sequences, series, limits, limsup, liminf 580
A.2.3 Continuity and differentiability 582
A.2.4 Riemann integration 584
A.3 Complex numbers, exponential and trigonometric functions 586
A.4 Metric spaces 590
A.4.1 Basic definitions 590
A.4.2 Continuous functions 592
A.4.3 Compactness 592
A.4.4 Sequences of functions and uniform convergence . . 593
A.5 Problems 594

B List of Abbreviations and Symbols **599**
B.1 Abbreviations 599
B.2 Symbols 600
