Preface

The first international symposium on mathematical foundations of the finite element method was held at the University of Maryland in 1973. During the last three decades there has been great progress in the theory and practice of solving partial differential equations, and research has extended in various directions. Full-scale nonlinear problems have come within the range of numerical simulation. The importance of mathematical modeling and analysis in science and engineering is steadily increasing. In addition, new possibilities of analysing the reliability of computations have appeared. Many other developments have occurred: these are only the most noteworthy.

This book is the record of the proceedings of the International Symposium on Mathematical Modeling and Numerical Simulation in Continuum Mechanics, held in Yamaguchi, Japan from 29 September to 3 October 2000. The topics covered by the symposium ranged from solids to fluids, and included both mathematical and computational analysis of phenomena and algorithms. Twenty-one invited talks were delivered at the symposium. This volume includes almost all of them, and expresses aspects of the progress mentioned above. All the papers were individually refereed. We hope that this volume will be a stepping-stone for further developments in this field.

The symposium was supported by many people and organizations. Special thanks should go to Professor H. Fujita and Professor H. Hironaka, for their support and advice in planning this symposium, and also to Professor Ohtsuka, Professor Tabata and Mr. Hataya, the members of the local organization committee, for their enthusiastic and continued cooperation. It should be acknowledged that the symposium was sponsored by the Japan Association for Mathematical Sciences, the Inoue Foundation for Science, Mitsui Zosen System Research Inc., the Yamaguchi Tourism and Convention Association, Grants-in-Aid for Scientific Research (A)-10304012, 11304004, (B)-10440035, 12440041, and Grant-in-Aid for Exploratory Research 11874022. Finally we wish to express our gratitude to The Japan Society for Industrial and Applied Mathematics, The Japan Society for Computational Engineering and Science, and the Department of Mathematical Science of Yamaguchi University, for their support and cooperation.

Table of Contents

Nonlinear Shell Models of Koiter's Type	1
<i>Philippe G. Ciarlet</i>	
A Survey of Stabilized Plate Elements	11
<i>Mikko Lyly, Rolf Stenberg</i>	
Prediction of the Fatigue Crack Growth Life in Microelectronics Solder Joints	23
<i>Ken Kaminishi</i>	
Multi-phase Flow with Reaction	39
<i>Hideo Kawarada, Hiroshi Suito</i>	
Universal and Simultaneous Solution of Solid, Liquid and Gas in Cartesian-Grid-Based CIP Method	57
<i>Takashi Yabe</i>	
Subgrid Phenomena and Numerical Schemes	73
<i>Franco Brezzi, Donatella Marini</i>	
Two Scale FEM for Homogenization Problems	91
<i>Christoph Schwab</i>	
Numerical Analysis of Electromagnetic Problems	109
<i>Fumio Kikuchi</i>	
A-priori Domain Decomposition of PDE Systems and Applications	125
<i>S. Delpino, J.L. Lions, O. Pironneau</i>	
A One Dimensional Model for Blood Flow: Application to Vascular Prosthesis	137
<i>Luca Formaggia, Fabio Nobile, Alfio Quarteroni</i>	
Essential Spectrum and Mixed Type Finite Element Method	155
<i>Takashi Kako, Haniffa Mohamed Nasir</i>	
Can We Trust the Computational Analysis of Engineering Problems? ..	169
<i>I. Babuška, T. Strouboulis</i>	
Numerical Computations for Ill-conditioned Problems by Multiple-Precision Systems	185
<i>Yuusuke Iso, Hiroshi Fujiwara, Kimihiro Saito</i>	

Numerical Verification Methods for Solutions
of Free Boundary Problems 195
Mitsuhiro T. Nakao, Cheon Seoung Ryou

Pattern Formation of Heat Convection Problems 209
Takaaki Nishida, Tsutomu Ikeda, Hideaki Yoshihara

Mathematical Modeling and Numerical Simulation
of Earth's Mantle Convection 219
Masahisa Tabata, Atsushi Suzuki

Theoretical and Numerical Analysis on 3-Dimensional Brittle Fracture . 233
Kohji Ohtsuka

Exploiting Partial or Complete Geometrical Symmetry in Boundary
Integral Equation Formulations of Elastodynamic Problems 253
Marc Bonnet

A New Fast Multipole Boundary Integral Equation Method
in Elastostatic Crack Problems in 3D 271
Ken-ichi Yoshida, Naoshi Nishimura, Shoichi Kobayashi

Computational Crack Path Prediction and the Singularities
in Elastic-Plastic Stress Fields 289
Tetsuhiko Miyoshi
