CONTENTS

Preface	v
Notations	vii
Chapter I Preliminary Notes	1
1. Auxiliary assertions	1
2. Estimates of the Cauchy matrix	21
Notes and comments to Chapter I	32
Chapter II Asymptotic Formulae	35
3. Theorem of Levinson. Dichotomy condition	35
4. Analogue of Levinson's theorem	38
5. Asymptotically diagonal equations with conditionally integrable coefficients	46
6. Analogue of the theorem of Hartman–Wintner	51
7. Asymptotically periodic equations	62
8. Asymptotic integration of nonlinear equations	75
Notes and comments to Chapter II	85
Chapter III Convergence of the Solutions	87
9. Convergence of the solutions of linear equations	87
10. Preservation of asymptotic properties	113
11. Convergence to a constant of the solutions of nonlinear impulsive equations	130
12. Convergence in nonlinear equations	140
13. Comparison method and convergence of the solutions	146
Notes and comments to Chapter III	164
Chapter IV Asymptotic Equivalence	167
14. Asymptotic equivalence of a linear and a nonlinear equation	167
15. $(h - k)$ dichotomy and asymptotic equivalence	175
16. Asymptotic equivalence via application of the Schauder – Tychonoff fixed point theorem	184

17. Asymptotic equivalence of equations having ψ -bounded solutions	198
18. Asymptotic equivalence of nonlinear equations	209
Notes and comments to Chapter IV	219
References	221
Author Index	227
Subject Index	229
