Balser, Werner, 1946–

Formal power series and linear systems of meromorphic
ordinary differential equations

Werner Balser.

p. cm. — (Universitext)

Includes bibliographical references and index.

ISBN 0-387-98690-1 (alk. paper)

1. Power series. 2. Differential equations, Linear.

3. Functions, Meromorphic. I. Title.

QA295.B325 1999

515'.2432—dc21

Contents

1	Basic Properties of Solutions	1
1.1	Simply Connected Regions	2
1.2	Fundamental Solutions	5
1.3	Systems in General Regions	8
1.4	Inhomogeneous Systems	10
1.5	Reduced Systems	12
1.6	Some Additional Notation	14
2	Singularities of First Kind	17
2.1	Systems with Good Spectrum	19
2.2	Confluent Hypergeometric Systems	21
2.3	Hypergeometric Systems	25
2.4	Systems with General Spectrum	27
2.5	Scalar Higher-Order Equations	34
3	Highest-Level Formal Solutions	37
3.1	Formal Transformations	38
3.2	The Splitting Lemma	42
3.3	Nilpotent Leading Term	45
3.4	Transformation to Rational Form	52
3.5	Highest-Level Formal Solutions	55
4	Asymptotic Power Series	59
4.1	Sectors and Sectorial Regions	60

4.2	Functions in Sectorial Regions	61
4.3	Formal Power Series	64
4.4	Asymptotic Expansions	65
4.5	Gevrey Asymptotics	70
4.6	Gevrey Asymptotics in Narrow Regions	73
4.7	Gevrey Asymptotics in Wide Regions	75
5	Integral Operators	77
5.1	Laplace Operators	78
5.2	Borel Operators	80
5.3	Inversion Formulas	82
5.4	A Different Representation for Borel Operators	83
5.5	General Integral Operators	85
5.6	Kernels of Small Order	89
5.7	Properties of the Integral Operators	91
5.8	Convolution of Kernels	93
6	Summable Power Series	97
6.1	Gevrey Asymptotics and Laplace Transform	99
6.2	Summability in a Direction	100
6.3	Algebra Properties	102
6.4	Definition of k -Summability	104
6.5	General Moment Summability	107
6.6	Factorial Series	110
7	Cauchy-Heine Transform	115
7.1	Definition and Basic Properties	116
7.2	Normal Coverings	118
7.3	Decomposition Theorems	119
7.4	Functions with a Gevrey Asymptotic	121
8	Solutions of Highest Level	123
8.1	The Improved Splitting Lemma	124
8.2	More on Transformation to Rational Form	127
8.3	Summability of Highest-Level Formal Solutions	129
8.4	Factorization of Formal Fundamental Solutions	131
8.5	Definition of Highest-Level Normal Solutions	137
9	Stokes' Phenomenon	139
9.1	Highest-Level Stokes' Multipliers	140
9.2	The Periodicity Relation	142
9.3	The Associated Functions	144
9.4	An Inversion Formula	150
9.5	Computation of the Stokes Multipliers	151
9.6	Highest-Level Invariants	153

9.7	The Freedom of the Highest-Level Invariants	155
10	Multisummable Power Series	159
10.1	Convolution Versus Iteration of Operators	160
10.2	Multisummability in Directions	161
10.3	Elementary Properties	162
10.4	The Main Decomposition Result	164
10.5	Some Rules for Multisummable Power Series	166
10.6	Singular Multidirections	167
10.7	Applications of Cauchy-Heine Transforms	169
10.8	Optimal Summability Types	173
11	Ecalle's Acceleration Operators	175
11.1	Definition of the Acceleration Operators	176
11.2	Ecalle's Definition of Multisummability	177
11.3	Convolutions	178
11.4	Convolution Equations	181
12	Other Related Questions	183
12.1	Matrix Methods and Multisummability	184
12.2	The Method of Reduction of Rank	187
12.3	The Riemann-Hilbert Problem	188
12.4	Birkhoff's Reduction Problem	189
12.5	Central Connection Problems	193
13	Applications in Other Areas, and Computer Algebra	197
13.1	Nonlinear Systems of ODE	198
13.2	Difference Equations	199
13.3	Singular Perturbations	201
13.4	Partial Differential Equations	202
13.5	Computer Algebra Methods	204
14	Some Historical Remarks	207
A	Matrices and Vector Spaces	211
A.1	Matrix Equations	212
A.2	Blocked Matrices	214
A.3	Some Functional Analysis	215
B	Functions with Values in Banach Spaces	219
B.1	Cauchy's Theorem and its Consequences	220
B.2	Power Series	221
B.3	Holomorphic Continuation	224
B.4	Order and Type of Holomorphic Functions	232
B.5	The Phragmén-Lindelöf Principle	234

C Functions of a Matrix	237
C.1 Exponential of a Matrix	238
C.2 Logarithms of a Matrix	240
Solutions to the Exercises	243
References	267
Index	289
List of Symbols	295
