Contents

Chapter 1 Spherical Astronomy

1.1 Elements of Plane Trigonometry 1
1.2 Some Properties of Plane Triangles 4
1.3 Elements of Spherical Trigonometry 5
1.4 Cartesian and Polar Coordinates 8
1.5 Terrestrial Latitude and Longitude on the Spherical Earth 10
1.6 Elements of Vector Calculus 13
Notes 15
Exercises 17

Chapter 2 Astronomical Reference Systems

2.1 The Alt-Azimuth System 22
2.2 The Hour Angle and Declination System 29
2.3 The Equatorial System 31
2.4 The Ecliptic System 34
2.5 The Galactic System 36
Notes 38

Chapter 3 Transformations of Coordinates

3.1 Transformations by Matrix Rotation 41
3.2 Transformations by Spherical Trigonometry 46
3.3 Some Examples and Applications 47
Exercises 50

Chapter 4 The Movements of the Earth and the Astronomical Times

4.1 The Movements of the Earth 53
4.2 The Sidereal Time (*ST*) 54
4.3 The Solar Time and the Equation of Time 55
4.4 The Universal Time (UT) 59
4.5 The Tropical Year and the Rates of *ST* and UT 59
4.6 The Year and the Julian Calendar 61
4.7 The Besselian Year or Annus Fictus 61
4.8 The Seasons 62
4.9 The Julian Date 63
Notes 64
Exercises 65

Chapter 5 The Movements of the Fundamental Planes
5.1 First Dynamical Considerations 69
5.2 The Precession of the Equinox 71
5.3 The Movements of the Fundamental Planes 74
5.4 First-Order Effects of the Precession on the Stellar Coordinates 75
5.5 The Nutation 80
5.6 Approximate Formulae for General Precession and Nutation 84
5.7 Newcomb's Rotation Formulae for Precession 85
5.8 Precession and Position Angles 86
Notes 87
Exercises 89

Chapter 6 Dynamics of Earth's Rotation
6.1 Newton's Lunisolar Precession 91
6.2 The Lunisolar Torque 94
6.3 The Precessional Potential 97
6.4 The Earth's Free Rotation 100
6.5 Recent Developments 108
Notes 109
Exercises 111

Chapter 7 Aberration of Light
7.1 The Solar Aberration 113
7.2 The Annual Aberration 117
7.3 Lorentz Transformations 120
7.4 Effects of Annual Aberration on the Stellar Coordinates 121
7.5 The Diurnal Aberration 124
7.6 Planetary Aberration 125
7.7 The Gravitational Deflection of Light 126
Notes 129

Chapter 8 The Parallax
8.1 The Trigonometric Parallax 131
8.2 The Diurnal Parallax 132
8.3 Solar and Lunar Parallaxes 138
8.4 The Annual Parallax 140
8.5 Secular and Dynamical Parallaxes 144
Notes 145
Exercises 146

Chapter 9 Radial Velocities and Proper Motions
9.1 Radial Velocities 150
9.2 Proper Motions 153

9.3 Variation of the Equatorial Coordinates 156
9.4 Interplay between Proper Motions and Precession Constants 158
9.5 Astrometric Radial Velocities 159
9.6 Apex of Stellar Motions and Group Parallaxes 160
9.7 The Peculiar Motion of the Sun 162
9.8 Secular and Statistical Parallaxes 164
9.9 Differential Rotation of the Galaxy and Oort's Constants 166
Notes 167
Exercises 169

Chapter 10 The Astronomical Times

10.1 The Sidereal Time *ST* 171
10.2 The Solar Time $T_\odot$ 172
10.3 The Year 173
10.3.1 Tropical Year 174
10.3.2 Besselian Year B, or Annus Fictus 174
10.3.3 Sidereal Year 175
10.3.4 Anomalistic Year 175
10.3.5 Draconic and Gaussian Years 176
10.4 The Dynamical Time 176
10.5 The Atomic Time 179
Notes 181
Exercise 182

Chapter 11 The Terrestrial Atmosphere

11.1 The Vertical Structure of the Atmosphere 183
11.2 The Refraction 185
11.3 Effects of Refraction on the Apparent Coordinates 190
11.4 The Chromatic Refraction of the Atmosphere 190
11.5 Relationships between Refraction Index, Pressure and Temperature 192
11.6 Scintillation and Seeing 193
Notes 196

Chapter 12 The Two-Body Problem

12.1 The Barycentric Treatment 199
12.2 The Gravitational Attraction 204
12.3 The Relative Movement 206
12.4 Planetary Masses from Kepler's Third Law 210
12.5 Escape Velocity 211
12.6 Some Considerations on Artificial Satellites 213
Notes 214
Exercises 215

Chapter 13 Orbital Elements and Ephemerides
13.1 Kepler's Equation 217
13.2 Ephemerides from the Orbital Elements 220
13.3 Planetary Configurations and Titius–Bode Law 222
13.4 Orbital Elements from the Observations 225
13.5 Application to Visual Binary Stars 228
Notes 234

Chapter 14 Elements of Perturbation Theories
14.1 Perturbations of the Planetary Movements 236
14.2 Planet Plus Small Moon 240
14.3 Case Earth–Moon 241
14.4 The Lunar Month and the Librations 245
14.5 The Case Planet Plus Planet 248
14.6 The Restricted Circular Three-Body Problem 250
14.7 A Nonspherical Body Plus a Small Nearby Satellite 255
14.8 Other Interesting Cases 258
Notes 259
Exercise 261

Chapter 15 Eclipses and Occultations
15.1 Moon's Phases 264
15.2 Conditions for the Occurrence of an Eclipse 265
15.3 Solar Eclipses 266
15.4 Lunar Eclipses 268
15.5 Besselian Elements and Magnitude of the Eclipse 270
15.6 Number and Repetitions of Eclipses 272
15.7 Stellar Occultations 274
Notes 277
Exercises 278

Chapter 16 Elements of Astronomical Photometry
16.1 Visual Magnitudes 282
16.2 Extension of the Definition of Magnitude 283
16.2.1 The Reflectivity of the Optics and Transmissivity of Filters 284
16.2.2 The Efficiency of the Detectors 287
16.3 Extinction by the Earth's Atmosphere 290
16.4 The Black Body 292
16.5 Color Indices and Two-Color Diagrams 297
16.6 Calibration of the Apparent Magnitudes in Physical Units 300
16.7 Apparent Diameters and Absolute Magnitudes of the Stars 301
16.8 The Hertzsprung–Russell Diagram 304

16.9 Interstellar Absorption 306
16.10 Extension to the Bodies of the Solar System 309
16.11 Radiation Quantities 311
Notes 313
Exercises 316

Chapter 17 Elements of Astronomical Spectroscopy
17.1 Spectroscopic Techniques 320
17.2 The Analysis of the Spectral Lines 323
17.3 Detailed Balance and the Boltzmann Equation 328
17.4 The Saha Equation 330
17.5 Criteria of Spectral Classification of Stars 335
17.6 The Harvard and the MK Classification Schemes 337
17.7 Low Temperature Stars 342
17.8 Peculiarities 343
17.9 Relationship between the MK Classification and Photometric Parameters 344
Notes 345

Bibliography 349

Index 357
