Preface	vii
<b>1 Kernel functionals and modular spaces</b>	<b>1</b>
1.1 Kernel functionals . . . . .	1
1.2 Modular spaces and modular convergence . . . . .	3
1.3 Quasiconvex modulars . . . . .	10
1.4 Subbounded modulars . . . . .	15
1.5 Bibliographical notes . . . . .	17
<b>2 Absolutely continuous modulars and moduli of continuity</b>	<b>18</b>
2.1 Absolutely finite and absolutely continuous modulars . . . . .	18
2.2 Moduli of continuity . . . . .	24
2.3 Bibliographical notes . . . . .	30
<b>3 Approximation by convolution type operators</b>	<b>32</b>
3.1 Embedding theorems and the error of modular approximation . . . . .	32
3.2 Convergence theorems . . . . .	38
3.3 Examples . . . . .	42
3.4 Rates of modular approximation in modular Lipschitz classes . . . . .	44
3.5 Nonlinear perturbations of linear integral operators . . . . .	47
3.6 Bibliographical notes . . . . .	51
<b>4 Urysohn integral operators with homogeneous kernel functions</b>	<b>53</b>
4.1 General concepts of homogeneity and Lipschitz conditions . . . . .	53
4.2 Some estimates for $T$ . . . . .	56
4.3 Estimates of $\rho[Tf - f]$ : case $K \in \mathcal{K}_\xi^1$ . . . . .	59
4.4 Estimates of $\rho[Tf - f]$ : case $K \in \mathcal{K}_\xi^\psi$ . . . . .	64
4.5 Convergence theorems . . . . .	68
4.6 Order of approximation in modular Lipschitz classes . . . . .	71
4.7 Application to nonlinear weighted Mellin convolution operators . . . . .	78
4.8 Bibliographical notes . . . . .	81
<b>5 Summability methods by convolution-type operators</b>	<b>83</b>
5.1 An estimate of $\rho[\alpha(T_1f - T_2g)]$ . . . . .	83
5.2 Conservative summability methods . . . . .	86
5.3 Regularity of methods with respect to different modulars . . . . .	91

5.4	Bibliographical notes . . . . .	96
<b>6</b>	<b>Nonlinear integral operators in the space <math>BV_\varphi</math></b>	<b>97</b>
6.1	Preliminaries . . . . .	97
6.2	Some estimates in $BV_\varphi$ . . . . .	98
6.3	A superposition theorem in $BV_\varphi$ . . . . .	100
6.4	Dependence on a parameter: the space $\widetilde{BV}_\varphi$ . . . . .	103
6.5	A superposition theorem in $\widetilde{BV}_\varphi$ . . . . .	107
6.6	The problem of convergence in $\varphi$ -variation . . . . .	108
6.7	A convergence theorem in $BV_\varphi$ for Mellin-type nonlinear integral operators . . . . .	111
6.8	Bibliographical notes . . . . .	118
<b>7</b>	<b>Application to nonlinear integral equations</b>	<b>121</b>
7.1	An embedding theorem . . . . .	121
7.2	Existence and uniqueness results via Banach's fixed point principle . . . . .	126
7.3	Existence results via Schauder's fixed point principle . . . . .	129
7.4	Bibliographical notes . . . . .	133
<b>8</b>	<b>Uniform approximation by sampling type operators</b>	<b>134</b>
8.1	Classical results . . . . .	134
8.2	Uniform convergence for a class of nonlinear integral operators . . . . .	144
8.3	Applications to the convergence results . . . . .	150
8.4	Rate of uniform approximation . . . . .	153
8.5	Applications regarding rate of convergence . . . . .	155
8.6	Uniform regular methods of summability . . . . .	158
8.7	Bibliographical notes . . . . .	159
<b>9</b>	<b>Modular approximation by sampling type operators</b>	<b>163</b>
9.1	Modular convergence for a class of nonlinear integral operators . . . . .	163
9.2	Applications . . . . .	174
9.3	Modular regular methods of summability . . . . .	180
9.4	Bibliographical notes . . . . .	181
	References . . . . .	183
	Index . . . . .	199
