# Probability Theory

Translated from the German by Robert B. Burckel

Walter de Gruyter  
Berlin • New York 1996

# Table of Contents

Preface	v
Table of Contents	vii
Interdependence of chapters	x
Notation	xi
Introduction	xiii
<b>Chapter I Basic Concepts of the Theory</b>	1
§1 Probability spaces and the language of probability theory	1
§2 Laplace experiments and conditional probabilities	6
§3 Random variables: Distribution, expected value, variance, Jensen's inequality	12
§4 Special distributions and their properties	23
§5 Convergence of random variables and distributions	32
<b>Chapter II Independence</b>	39
§6 Independent events and $\sigma$ -algebras	39
§7 Independent random variables	45
§8 Products and sums of independent random variables	49
§9 Infinite products of probability spaces	55
<b>Chapter III Laws of Large Numbers</b>	65
§10 Posing the question	65
§11 Zero-one laws	68
§12 Strong Law of Large Numbers	81
§13 Applications	92
§14 Almost sure convergence of infinite series	102
<b>Chapter IV Martingales</b>	109
§15 Conditional expectations	109
§16 Martingales — definition and examples	129
§17 Transformation via optional times	140
§18 Inequalities for supermartingales	151
§19 Convergence theorems	155
§20 Applications	168

<b>Chapter V Fourier Analysis</b>	178
§21 Integration of complex-valued functions	178
§22 Fourier transformation and characteristic functions	181
§23 Uniqueness and Continuity Theorems	190
§24 Normal distribution and independence	203
§25 Differentiability of Fourier transforms	208
§26 Continuous mappings into the circle	215
<b>Chapter VI Limit Distributions</b>	219
§27 Examples of limit theorems	219
§28 The Central Limit Theorem	232
§29 Infinitely divisible distributions	245
§30 Gauss measures and multi-dimensional central limit theorem	256
<b>Chapter VII Law of the Iterated Logarithm</b>	266
§31 Posing the question and elementary preparations	266
§32 Probabilistic preparations	274
§33 Strassen's theorem of the iterated logarithm	283
§34 Supplements	291
<b>Chapter VIII Construction of Stochastic Processes</b>	297
§35 Projective limits of probability measures	297
§36 Kernels and semigroups of kernels	305
§37 Processes with stationary and independent increments	319
§38 Processes with pre-assigned path-set	327
§39 Continuous modifications	333
§40 Brownian motion as a stochastic process	340
§41 Poisson processes	351
§42 Markov processes	357
§43 Gauss processes	372
§44 Conditional distributions	387
<b>Chapter IX Brownian Motion</b>	395
§45 Brownian motion with filtration and martingales	395
§46 Maximal inequalities for martingales	401
§47 Behavior of Brownian paths	407
§48 Examples of stochastic integrals	420
§49 Optional times and optional sampling	435
§50 The strong Markov property	450
§51 Prospectus	476

Bibliography	493
Symbol Index	501
Name Index	505
General Index	509
