Preface	ix
<b>Classification of Propositional Provability Logics</b>	
<b>L. D. Beklemishev</b>	<b>1</b>
Introduction	1
1. Preliminaries	7
2. Semantics for <b>S</b> , <b>D</b> , and <b>A</b>	14
3. Trace classification of provability logics	21
4. Prime <b>A</b> -models and their characteristic formulas	30
5. Provability logics containing <b>D</b>	35
6. Provability logics containing <b>A</b>	38
7. Main results	43
8. Examples, comments, and related results	48
References	55
<b>Lambek Calculus and Formal Grammars</b>	
<b>Mati Pentus</b>	<b>57</b>
Introduction	57
1. Preliminaries	60
2. Free group interpretation	63
3. Thin sequents	65
4. Interpolation	66
5. Main theorem	69
6. Interpolation in fragments	73
7. Construction of a context-free grammar for a product-free Lambek grammar	79
8. Conjoinable types in the Lambek calculus	80
9. Multiplicative cyclic linear logic	81
References	86
<b>Relativizability in Complexity Theory</b>	
<b>Nikolai K. Vershchagin</b>	<b>87</b>
Notation	87
1. Introduction	87

2. A uniform way to define complexity classes	89
3. General criteria	92
4. Relativizable inclusions between particular complexity classes	104
5. Turing reducibility between particular complexity classes	114
6. Complete languages in particular complexity classes	121
7. Perceptrons and oracle separation of $AM \cap co-AM$ from $PP$	126
8. The universum method	132
9. Relations between complexity classes relativized with a random oracle	159
References	170
