Preface	ix
<b>I</b>	<b>Mathematical Methods for Differential Equations</b>
<b>1</b>	<b>Models and Differential Equations</b> 1
1.1	Introduction . . . . . 1
1.2	Mathematical Models and Computation . . . . . 2
1.3	Examples of Mathematical Models. . . . . 8
1.4	Validation, Determinism, and Stochasticity. . . . . 16
<b>2</b>	<b>Models and Mathematical Problems</b> 19
2.1	Introduction . . . . . 19
2.2	Classification of Models. . . . . 20
2.3	Statement of Problems. . . . . 26
2.4	Solution of Initial-Value Problems. . . . . 29
2.5	Representation of the Dynamic Response. . . . . 40
2.6	On the Solution of Boundary-Value Problems . . . . . 46
2.7	Problems. . . . . 50
<b>3</b>	<b>Stability and Perturbation Methods</b> 57
3.1	Introduction . . . . . 57
3.2	Stability Definitions . . . . . 63
3.3	Linear Stability Methods. . . . . 65
3.4	Nonlinear Stability. . . . . 71
3.5	Regular Perturbation Methods. . . . . 76
3.6	Problems . . . . . 87

<b>II</b>	<b>Mathematical Methods of Classical Mechanics</b>	<b>j</b>
<b>4</b>	<b>Newtonian Dynamics</b>	<b>93</b>
4.1	Introduction . . . . .	93
4.2	Principles of Newtonian Mechanics. . . . .	95
4.3	Balance Laws for Systems of Point Masses. . . . .	102
4.4	Active and Reactive Forces. . . . .	106
4.4.1	Constraints and reactive forces. . . . .	107
4.4.2	Active forces and force fields. . . . .	115
4.5	Applications . . . . .	122
4.5.1	Dynamics of simple pendulum. . . . .	123
4.5.2	Particle subject to a central force. . . . .	125
4.5.3	Heavy particle falling in air . . . . .	129
4.5.4	Three-point masses subject to elastic forces . . . . .	133
4.6	Problems. . . . .	136
<b>5</b>	<b>Rigid Body Dynamics</b>	<b>139</b>
5.1	Introduction. . . . .	139
5.2	Rigid Body Models. . . . .	140
5.3	Active and Reactive Forces in Rigid Body Dynamics. . . . .	148
5.4	Constrained Rigid Body Models. . . . .	152
5.5	Articulated Systems. . . . .	162
5.6	Applications. . . . .	165
5.6.1	Rigid body model of a vehicle and plane dynamics. . . . .	166
5.6.2	Compound pendulum. . . . .	167
5.6.3	Uniform rotations. . . . .	170
5.6.4	Free rotations of a gyroscope. . . . .	171
5.6.5	Ball on an inclined plane. . . . .	174
5.7	Problems. . . . .	178
<b>6</b>	<b>Energy Methods and Lagrangian Mechanics</b>	<b>183</b>
6.1	Introduction. . . . .	183
6.2	Elementary and Virtual Work. . . . .	185
6.3	Energy Theorems. . . . .	189
6.4	The Method of Lagrange Equations. . . . .	194
6.5	Potential and First Integrals. . . . .	200
6.6	Energy Methods and Stability. . . . .	207
6.7	Applications. . . . .	211
6.7.1	Three body articulated system. . . . .	212
6.7.2	Stability of Duffing's model. . . . .	214

- 6.7.3 Free rotations or Poincot's motion . . . . . 217
- 6.7.4 Heavy gyroscope. . . . . 220
- 6.7.5 The rolling coin . . . . . 224
- 6.8 Problems . . . . . 227

**III Bifurcations, Chaotic Dynamics, Stochastic Models, and Discretization of Continuous Models**

**7 Deterministic and Stochastic Models in Applied Sciences \* 233**

- 7.1 Introduction . . . . . 233
- 7.2 Mathematical Modeling in Applied Sciences . . . . . 234
- 7.3 Examples of Mathematical Models. . . . . 239
- 7.4 Further Remarks on Modeling. . . . . 244
- 7.5 Mathematical Modeling and Stochasticity. . . . . 246
  - 7.5.1 Random variables and stochastic calculus . . . . . 251
  - 7.5.2 Moment representation of the dynamic response. . . . . 259
  - 7.5.3 Statistical representation of large systems . . . . . 261
- 7.6 Problems . . . . . 263

**8 Chaotic Dynamics, Stability, and Bifurcations 267**

- 8.1 Introduction . . . . . 267
- 8.2 Stability Diagrams. . . . . 268
- 8.3 Stability Diagrams and Potential Energy. . . . . 275
- 8.4 Limit Cycles. . . . . 282
- 8.5 Hopf Bifurcation . . . . . 287
- 8.6 Chaotic Motions. . . . . 292
- 8.7 Applications. . . . . 294
  - 8.7.1 Ring on a rotating wire. . . . . 294
  - 8.7.2 Metallic meter. . . . . 298
  - 8.7.3 Line galloping model. . . . . 301
  - 8.7.4 Flutter instability model. . . . . 304
  - 8.7.5 Models presenting transition to chaos. . . . . 306
- 8.8 Problems . . . . . 309

**9 Discrete Models of Continuous Systems 313**

- 9.1 Introduction . . . . . 313
- 9.2 Diffusion Models. . . . . 317
- 9.3 Mathematical Models of Traffic Flow. . . . . 321
- 9.4 Mathematical Statement of Problems. . . . . 326

9.5	Discretization of Continuous Models. . . . .	329
9.6	Problems. . . . .	336
<b>Appendix I.</b>	<b>Numerical Methods for Ordinary Differential Etyuations</b>	<b>341</b>
1	Introduction . . . . .	.341
2	Numerical Methods for Initial-Value Problems. . . . .	342
3	Numerical Methods for Bounflary-Value Problems. . . . .	349
<b>Appendix II.</b>	<b>Kinematics, Applied Forces, Momentum and Mechanical Energy</b>	<b>357</b>
1	Introduction . . . . .	.357
2	Systems of Applied Forces. . . . .	358
3	Fundamental of Kinematics. . . . .	361
4	Center of Mass. . . . .	363
5	Tensor of Inertia . . . . .	365
6	Linear Momentum . . . . .	369
7	Angular Momentum . . . . .	370
8	Kinetic Energy. . . . .	372
<b>Appendix III.</b>	<b>Scientific Programs</b>	<b>377</b>
1	Introduction to Programming . . . . .	.377
2	Scientific Programs . . . . .	382
	<b>References</b>	<b>409</b>
	<b>Subject Index</b>	<b>411</b>
