Contents

Preface **vii**

Chapter 1. On the Modelling of Complex Biological Systems **1**
1.1 Introduction 1
1.2 Motivations and Aims 3
1.3 Mathematical Background 6
1.4 Contents 6

Chapter 2. Mathematical Frameworks of the Generalized Kinetic (Boltzmann) Theory **11**
2.1 Introduction 11
2.2 Mathematical Representation 13
2.3 Modelling Microscopic Interactions 16
2.4 Mathematical Frameworks 21
2.5 Some Simplified Models 22
2.6 Discrete Models 24
2.7 Critical Analysis 27

Chapter 3. Modelling the Immune Competition and Applications **33**
3.1 Introduction 33
3.2 Phenomenological Description 34
3.3 Modelling the Immune Competition 42
3.4 Some Technical Particularizations 48
3.5 Critical Analysis and Additional Applications 54

Chapter 4. On the Cauchy Problem **57**
4.1 Introduction 57
4.2 The Cauchy Problem 58

4.3 Asymptotic Behavior 64
4.4 Perspectives 82

Chapter 5. Simulations, Biological Interpretations, and Further Modelling Perspectives 85
5.1 Introduction 85
5.2 Simulation of Immune Competition 87
5.3 Tumor–Immune Competition 105
5.4 Comparison with Experimental Data 113
5.5 Developments and Perspectives 115

Chapter 6. Models with Space Structure and the Derivation of Macroscopic Equations 119
6.1 Introduction 119
6.2 Models with Space Dynamics 122
6.3 Asymptotic Limit for Mass-Conserving Systems 131
6.4 Models with Proliferation and Destruction 136
6.5 Application 144
6.5 Critical Analysis 148

Chapter 7. Critical Analysis and Forward Perspectives 151
7.1 Critical Analysis 151
7.2 Developments Toward New Models 153
7.3 Mean Field Interactions 154
7.4 On the Interaction Between Biological and Mathematical Sciences 156

Appendix. Basic Tools of Mathematical Kinetic Theory 159
1 Introduction 159
2 Multiparticle Systems and Statistical Distribution . . . 160
3 The Distribution Function 164
4 On the Derivation of the Boltzmann Equation 166
5 Mathematical Properties of the Boltzmann Equation . . 168
6 The Discrete Boltzmann Equation 172

Glossary 175
