Contents

Preface . . . . . **vii**

1 Introduction **1**

1.1 The origins of mathematical logic 1

1.2 Propositional calculus 2

1.3 Predicate calculus 3

1.4 Theorem proving and logic programming 5

1.5 Systems of logic 6

1.6 Exercise 7

2 Propositional Calculus: Formulas, Models, Tableaux **9**

2.1 Boolean operators 9

2.2 Propositional formulas 12

2.3 Interpretations 17

2.4 Logical equivalence and substitution 19

2.5 Satisfiability, validity and consequence 24

2.6 Semantic tableaux 29

2.7 Soundness and completeness 33

2.8 Implementation^P 38

2.9 Exercises 40

3 Propositional Calculus: Deductive Systems **43**

3.1 Deductive proofs 43

3.2 The Gentzen system $\mathcal{G}$ 45

3.3 The Hilbert system $\mathcal{H}$ 48

3.4 Soundness and completeness of $\mathcal{H}$ 56

3.5 A proof checker^P 59

3.6 Variant forms of the deductive systems* 60

3.7 Exercises 64

4 Propositional Calculus: Resolution and BDDs **67**
4.1 Resolution 67
4.2 Binary decision diagrams (BDDs) 81
4.3 Algorithms on BDDs 88
4.4 Complexity* 95
4.5 Exercises 99

5 Predicate Calculus: Formulas, Models, Tableaux **101**
5.1 Relations and predicates 101
5.2 Predicate formulas 102
5.3 Interpretations 105
5.4 Logical equivalence and substitution 107
5.5 Semantic tableaux 109
5.6 Implementation^P 118
5.7 Finite and infinite models* 120
5.8 Decidability* 121
5.9 Exercises 125

6 Predicate Calculus: Deductive Systems **127**
6.1 The Gentzen system $\mathcal{G}$ 127
6.2 The Hilbert system $\mathcal{H}$ 129
6.3 Implementation^P 134
6.4 Complete and decidable theories* 135
6.5 Exercises 138

7 Predicate Calculus: Resolution **139**
7.1 Functions and terms 139
7.2 Clausal form 142
7.3 Herbrand models 148
7.4 Herbrand's Theorem* 150
7.5 Ground resolution 152
7.6 Substitution 153
7.7 Unification 155
7.8 General resolution 164

7.9 Exercises 171

8 Logic Programming 173
8.1 Formulas as programs 173
8.2 SLD-resolution 176
8.3 Prolog 181
8.4 Concurrent logic programming* 186
8.5 Constraint logic programming* 194
8.6 Exercises 199

9 Programs: Semantics and Verification 201
9.1 Introduction 201
9.2 Semantics of programming languages 202
9.3 The deductive system $\mathcal{HL}$ 209
9.4 Program verification 211
9.5 Program synthesis 213
9.6 Soundness and completeness of $\mathcal{HL}$ 216
9.7 Exercises 219

10 Programs: Formal Specification with Z 221
10.1 Case study: a traffic signal 221
10.2 The Z notation 224
10.3 Case study: semantic tableaux 230
10.4 Exercises 234

11 Temporal Logic: Formulas, Models, Tableaux 235
11.1 Introduction 235
11.2 Syntax and semantics 236
11.3 Models of time 239
11.4 Semantic tableaux 242
11.5 Implementation of semantic tableaux^P 252
11.6 Exercises 255

12 Temporal Logic: Deduction and Applications 257
12.1 The deductive system $\mathcal{L}$ 257

12.2 Soundness and completeness of $\mathcal{L}^*$ 262
12.3 Other temporal logics* 264
12.4 Specification and verification of programs* 266
12.5 Model checking* 272
12.6 Exercises 280

A Set Theory **283**
A.1 Finite and infinite sets 283
A.2 Set operators 284
A.3 Ordered sets 286
A.4 Relations and functions 287
A.5 Cardinality 288
A.6 Proving properties of sets 289

B Further Reading **291**

Bibliography **293**

Index of Symbols **297**

Index **299**
