Table of Contents

Preface	xiii
1 Classical Real Variables	1
1.1 Set theory: a framework	1
1.2 The topology of $\mathbb{R}$	2
1.3 Classical real variables	10
1.3.1 Motivation for the Lebesgue theory	10
1.3.2 Continuous functions	11
1.3.3 Uniform convergence	17
1.3.4 Sets of differentiability	19
1.4 References for the history of integration theory	25
1.5 Potpourri and titillation	26
1.6 Problems	28
2 Lebesgue Measure and General Measure Theory	37
2.1 The theory of measure prior to Lebesgue, and preliminaries ..	37
2.2 The construction of Lebesgue measure on $\mathbb{R}$	40
2.3 The existence of Lebesgue measure on $\mathbb{R}^d$	51
2.4 General measure theory	58
2.5 Approximation theorems for measurable functions	70
2.6 Potpourri and titillation	78
2.7 Problems	83
3 The Lebesgue Integral	95
3.1 Motivation	95
3.2 The Lebesgue integral	99
3.3 The Lebesgue dominated convergence theorem (LDC)	105
3.4 The Riemann and Lebesgue integrals	117
3.5 Lebesgue–Stieltjes measure and integral	123
3.6 Some fundamental applications	129
3.7 Fubini and Tonelli theorem	132
3.8 Measure zero and sets of uniqueness	140
3.8.1 B. Riemann	140
3.8.2 G. Cantor	141
3.8.3 D. Menshov	142

3.8.4	N. Bari and A. Rajchman	142
3.9	Potpourri and titillation	143
3.10	Problems	148
4	The Relationship between Differentiation and Integration on $\mathbb{R}$	165
4.1	Functions of bounded variation and associated measures	165
4.2	Decomposition into discrete and continuous parts	172
4.3	The Lebesgue differentiation theorem	178
4.4	Fundamental Theorem of Calculus I	185
4.5	Absolute continuity and Fundamental Theorem of Calculus II	189
4.6	Absolutely continuous functions	195
4.7	Potpourri and titillation	201
4.8	Problems	204
5	Spaces of Measures and the Radon–Nikodym Theorem	219
5.1	Signed and complex measures, and the basic decomposition theorems	219
5.2	Discrete and continuous, absolutely continuous and singular measures	232
5.3	The Vitali–Lebesgue–Radon–Nikodym theorem	239
5.4	The relation between set and point functions on $\mathbb{R}$	246
5.5	$L^p_\mu(X)$, $1 \leq p \leq \infty$	251
5.6	Potpourri and titillation	261
5.7	Problems	264
6	Weak Convergence of Measures	277
6.1	Vitali theorem	277
6.2	Nikodym and Hahn–Saks theorems	283
6.3	Weak sequential convergence	292
6.4	Dieudonné–Grothendieck theorem	303
6.5	Norm and weak sequential convergence	310
6.6	Potpourri and titillation	316
7	Riesz Representation Theorem	321
7.1	Original Riesz representation theorem	321
7.2	Riesz representation theorem (RRT)	323
7.3	Radon measures	336
7.4	Support and the approximation theorem	342
7.5	Distribution theory	345
7.6	Potpourri and titillation	353

8	Lebesgue Differentiation Theorem on $\mathbb{R}^d$	359
8.1	Introduction	359
8.2	Maximal function and Lebesgue differentiation theorem	361
8.3	Coverings	364
8.4	Differentiation of measures	372
8.5	Bounded variation and the divergence theorem	380
8.6	Rearrangements and the maximal function theorem	384
8.7	Change of variables and surface measure	395
8.8	Potpourri and titillation	401
9	Self-Similar Sets and Fractals	407
9.1	Self-similarity and fractals	407
9.2	Peano curve	412
9.3	Hausdorff measure	416
9.4	Hausdorff dimension and self-similar sets	423
9.5	Lipschitz mappings and generalizations of fractals	427
9.6	Potpourri and titillation	433
A	Functional Analysis	441
A.1	Definitions of spaces	441
A.2	Examples	446
A.3	Separability	450
A.4	Moore–Smith and Arzelà–Ascoli theorems	451
A.5	Uniformly continuous functions	453
A.6	Baire category theorem	454
A.7	Uniform Boundedness Principle and Schur lemma	457
A.8	Hahn–Banach theorem	459
A.9	The weak and weak* topologies	466
A.10	Linear maps	471
A.11	Embeddings of dual spaces	473
A.12	Hilbert spaces	475
A.13	Operators on Hilbert spaces	480
A.14	Potpourri and titillation	482
B	Fourier Analysis	487
B.1	Fourier transforms	487
B.2	Analytic properties of Fourier transforms	491
B.3	Approximate identities	494
B.4	The $L_m^2(\mathbb{R})$ theory of Fourier transforms	498
B.5	Fourier series	501
B.6	The $L^1(\mathbb{T}_{2\Omega})$ theory of Fourier series	503
B.7	The Stone–Weierstrass theorem	506
B.8	The $L^2(\mathbb{T}_{2\Omega})$ theory of Fourier series	507
B.9	Haar measure	509
B.10	Dual groups and the Fourier analysis of measures	514

B.11 Radial Fourier transforms	519
B.12 Wiener's Generalized Harmonic Analysis (GHA)	522
B.13 Epilogue	528
References	529
Subject Index	551
Index of Names	565
Index of Notation	573
