# Contents

Preface	xi
List of Notation	xix
Chapter 1. Basic Concepts	1
§1. Permutation representations	1
§2. Modules and operator representations	3
§3. Representations of algebras	4
§4. Group algebras	6
§5. Matrix representations	7
§6. Completely reducible modules	9
§7. Schur's Lemma	10
§8. Maschke's Theorem	11
§9. Representations of abelian groups	13
§10. On Maschke's Theorem	17
Chapter 2. Characters	23
§1. Functions on a group	23
§2. Schur's relations	23
§3. Characters. The First Orthogonality Relation	25
§4. Irreducible components of a character	27
§5. The number of irreducible characters of a group	29
§6. The Second Orthogonality Relation	31
§7. The character table and the Frattini subgroup	36
§8. Nagao's Theorem	37
§9. Gallagher's theorems on commutators	38
§10. Saksonov's example	43
§11. On restriction of irreducible characters	43
§12. Another proof of the orthogonality relations	45
Chapter 3. On Arithmetical Properties of Characters	47
§1. Algebraic integers	47
§2. Values of characters are algebraic integers	48
§3. The Frobenius-Molien Theorem on degrees	48
§4. Algebraically conjugate characters	50
§5. Kernels and quasikernels	53
§6. Solvability of $\{p, q\}$ -groups	55
§7. Burnside's theorems on commutators	57
§8. Rational groups	59
§9. On characters of $p$ -groups	62

§10. On the class equation	66
§11. Mann's Theorem	67
Chapter 4. Products of Characters	71
§1. Tensor product	71
§2. Exterior powers	74
§3. Symmetric powers	77
§4. Products of representations	78
§5. Characters of exterior and symmetric powers	83
§6. The Frobenius-Schur indicator	84
§7. Solutions of systems of two-term equations	90
§8. Characters of direct products	92
§9. Intersections of kernels and quasikernels	94
§10. On products of irreducible characters	95
§11. On the number of solutions of $x^n = 1$ in a group	95
§12. Mann's Theorem on squares of characters	100
Chapter 5. Induced Characters and Representations	103
§1. Induced characters	103
§2. Kernels of induced characters	106
§3. Mackey's theorems	107
§4. Permutation representations	109
§5. Induced representations	116
§6. The Brauer-Suzuki-Wall Theorem	118
§7. Burnside's Theorem on 2-transitive groups	120
§8. Gallagher's Theorem on restriction of characters	121
§9. Monomial representations and characters	125
§10. M-groups	126
§11. On the number of solutions of $x^n = 1$ in a group	127
§12. More theorems of Mackey's	133
§13. Generalizations of M-groups	136
§14. On intersections of kernels of some characters	137
Appendix. Counting $p$ -subgroups	139
Chapter 6. Projective Representations	141
§1. Basic notions	141
§2. Twisted group algebra	143
§3. The Schur multiplier	144
§4. The exponent of the Schur multiplier	152
§5. The Schur multiplier of a group and its quotient group	156
§6. Projective representations of abelian groups	163
§7. Commutator subgroups of representation groups	170
§8. Intersection of kernels	171
§9. The Schur multiplier of a direct product	172
§10. Reynolds' Realization Theorem	174
§11. $p$ -groups with large multipliers	176
§12. More about orders of multipliers	183
Chapter 7. Clifford Theory	185
§1. Clifford's Theorem	185

§2. Ito's Theorem on degrees	187
§3. Clifford's Theorem on ramification	189
§4. Gallagher's Extension Theorem	196
§5. Isaacs' Restriction Theorem	199
§6. Gallagher's General Extension Theorem	200
§7. $p$ -rational characters	205
§8. The class number of an extension	207
§9. Dornhoff's Theorem	211
§10. Tate's Normal $p$ -complement Theorem	213
§11. Further results on the class number	214
§12. Miscellaneous	215
§13. Monomiality criterion	216
§14. Commutativity criterion for a normal section	217
§15. Dade's example	217
§16. Generalizations of M-groups	219
§17. Nilpotent class-two subgroups of $GL(n, p)$	220
Chapter 8. Brauer's Induction Theorems	225
§1. Characterization of characters	225
§2. Realization theorem	229
§3. Groups with partitions of special type	230
§4. Characters of $p$ -defect 0	231
§5. Brauer's paper on quotient groups	232
§6. Existence of a normal complement to a section	238
Chapter 9. Faithful Representations	241
§1. Zhmud's theorems	241
§2. Weisner's criterion	250
§3. CM-groups	250
§4. $CM_{2p-1}$ -groups	257
§5. On $CM_3$ - and $CM_4$ -groups	263
Chapter 10. Existence of Normal Subgroups	267
§1. Introductory remarks	267
§2. Wielandt's Theorems	268
§3. Characters of Frobenius groups	274
§4. Converse to the Frobenius Theorem	279
§5. A variant of Wielandt's Theorem	287
§6. Exceptional characters. CA-groups	289
§7. Cossey-Hawkes-Mann's and Isaacs' Theorems	296
Chapter 11. On Sums of Degrees of Irreducible Characters	299
§1. Introduction	299
§2. Minimal nonnilpotent groups	300
§3. Auxiliary results	303
§4. Nonnilpotent case of the Main Theorem	314
§5. Counterexamples to a conjecture	315
§6. Nilpotent case of the Main Theorem	318
§7. Groups with many involutions	327
§8. Irreducible components of induced characters	331

§9. Mann's Theorem	334
Chapter 12. Groups of Relatively Small Height	335
§1. Introduction	335
§2. Auxiliary results	336
§3. Key lemma	337
§4. Classification of $MH(p)$ -groups	339
§5. Proof of the Main Theorem	342
Chapter 13. The Brauer–Suzuki Theorem	343
§1. Case $n > 2$ of Theorem 1	344
§2. Case $n = 2$ of Theorem 1	345
Appendices	351
1. Characterization of Frobenius complements	351
2. On subgroups with the character restriction property	353
Notes on the Bibliography	357
