Contents

Preface	xi
Nomenclature	xiii
1 Introduction	1
2 Practical Motivations	5
2.1 Selected examples	5
2.2 Review and summary	13
2.3 Further reading	13
2.4 Problems	13
3 Optimality Conditions	15
3.1 Explicit functional constraints	16
3.2 Including abstract constraints	25
3.3 Remarks on sequential optimality conditions	27
3.4 Review and summary	27
3.5 Further reading	28
3.6 Problems	28
4 Model Augmented Lagrangian Algorithm	31
4.1 Main model algorithm and shifts	32
4.2 Multipliers and inactive constraints	36
4.3 Review and summary	37
4.4 Further reading	37
4.5 Problems	38
5 Global Minimization Approach	41
5.1 Feasibility result	41
5.2 Optimality result	42
5.3 Optimality subject to minimal infeasibility	44
5.4 Review and summary	45
5.5 Further reading	45
5.6 Problems	46
6 General Affordable Algorithms	47
6.1 The algorithm with abstract constraints	54
6.2 Review and summary	56
6.3 Further reading	56

6.4	Problems	56
7	Boundedness of the Penalty Parameters	59
7.1	Assumptions on the sequence	59
7.2	Regularity assumptions	61
7.3	A pause for sensitivity	62
7.4	Convergence of the multipliers	63
7.5	Assumption on the true multipliers	64
7.6	Local reduction of the error	64
7.7	Boundedness theorem	70
7.8	Review and summary	70
7.9	Further reading	70
7.10	Problems	71
8	Solving Unconstrained Subproblems	73
8.1	General algorithm	73
8.2	Magic steps and nonmonotone strategies	75
8.3	Well-definiteness and global convergence	77
8.4	Local convergence	79
8.5	Computing search directions	87
8.6	Review and summary	93
8.7	Further reading	94
8.8	Problems	94
9	Solving Constrained Subproblems	97
9.1	Spectral projected gradient	97
9.2	Active set methods	103
9.3	Interior stabilized Newton	109
9.4	Review and summary	109
9.5	Further reading	109
9.6	Problems	110
10	First Approach to Algencan	113
10.1	Problem definition	113
10.2	Parameters of the subroutine Algencan	114
10.3	A simple example	127
10.4	Installing and running Algencan	133
10.5	Common questions	138
10.6	Review and summary	139
10.7	Further reading	139
10.8	Problems	139
11	Adequate Choice of Subroutines	141
11.1	Separate evaluation of objective function and constraints	141
11.2	Combined evaluation of objective function and constraints	144
11.3	Providing matrix-vector products	145
11.4	Available derivatives and algorithmic options	147
11.5	Common questions	148
11.6	Review and summary	149
11.7	Further reading	149
11.8	Problems	149

12	Making a Good Choice of Algorithmic Options and Parameters	151
12.1	Alternatives for setting additional parameters	151
12.2	Output level of detail and output files	152
12.3	Iteration limits	152
12.4	Penalty parameter: Initial value and limit	153
12.5	Scaling objective function and constraints	154
12.6	Removing fixed variables	154
12.7	Adding slack variables	155
12.8	Solving unconstrained and bound-constrained (sub)problems	156
12.9	How to solve feasibility problems	159
12.10	Acceleration process	161
12.11	Review and summary	163
12.12	Problems	164
13	Practical Examples	165
13.1	Packing molecules	165
13.2	Drawing proportional maps	171
13.3	Optimal control	177
13.4	Grid generation	182
13.5	Review and summary	191
13.6	Further reading	192
13.7	Problems	192
14	Final Remarks	195
	Bibliography	199
	Author Index	215
	Subject Index	219
