## I GEOMETRY

<b>1</b>	<b>Discretization of Surfaces and Integrable Systems</b>	<b>3</b>
	<i>Alexander I. Bobenko</i>	
	<i>Ulrich Pinkall</i>	
1	Introduction	3
2	Parametrizations of surfaces and their discretization	6
2.1	Parametrized surfaces and nets	6
2.2	Discrete A-surfaces (asymptotic line nets)	9
2.3	Discrete C-surfaces (curvature line nets)	10
3	Discrete K-surfaces (constant negative Gaussian curvature surfaces)	14
3.1	Smooth surfaces with constant negative Gaussian curvature	14
3.2	Discrete K-surfaces from a discrete Lax representation	16
3.3	Gauss map of discrete K-surfaces	20
3.4	The discrete sine-Gordon equation	21
3.5	Construction of discrete K-surfaces	23
4	Discrete H-surfaces (constant mean curvature surfaces)	24
4.1	Smooth constant mean curvature surfaces	24
4.2	Discrete H-surfaces from a discrete Lax representation	26
4.3	Compatibility conditions	29
4.4	Geometric properties of discrete H-surfaces	30
4.5	A definition of the mean curvature for discrete isothermic surfaces	34
5	Other integrable nets	36
5.1	Discrete O-systems (orthogonal coordinate systems)	36
5.2	Discrete I-surfaces (isothermic surfaces)	39

5.3	Discrete M-surfaces (minimal isothermic surfaces)	41
6	Discrete conformal maps	43
6.1	Discrete isothermic nets in $\mathbb{C}$	43
6.2	Discrete P-surfaces (nets with the parallelogram property)	45
6.3	Equations for cross-ratios of P-nets in $\mathbb{C}$	46
6.4	Schramm's constraint	49
6.5	Discrete S-surfaces in $\mathbb{R}^3$ (Schramm isothermic surfaces)	51
6.6	Examples of discrete conformal mappings	53
	Bibliography	56
<b>2</b>	<b>A Discrete Version of the Darboux Transform for Isothermic Surfaces</b>	<b>59</b>
	<i>Udo Hertrich-Jeromin</i>	
	<i>Tim Hoffmann</i>	
	<i>Ulrich Pinkall</i>	
1	Introduction	59
2	The cross ratio	61
3	Discrete isothermic nets	65
4	The Darboux transform	68
5	Discrete nets of constant mean curvature	73
	Bibliography	80
<b>3</b>	<b>Discrete Amsler Surfaces and a Discrete Painlevé III Equation</b>	<b>83</b>
	<i>Tim Hoffmann</i>	
1	Introduction	83
2	Discrete surfaces with constant negative Gaussian curvature	84
2.1	A square root of the discrete Sine-Gordon equation	84
2.2	Discrete K-surfaces	85
3	The Amsler surface and the Painlevé equation	86
4	Discrete Amsler surface and discrete $\lambda$ -equation	87
5	A discrete Painlevé III equation	95
	Bibliography	96
<b>4</b>	<b>Discrete cmc Surfaces and Discrete Holomorphic Maps</b>	<b>97</b>
	<i>Tim Hoffmann</i>	
1	Introduction	97
2	The DPW method	97
3	Discrete cmc surfaces	99
4	Splitting in the discrete case	100
5	The discrete DPW method	105
6	Examples	106
6.1	Cylinder and two-legged Mr Bubbles	106

6.2	Delaunay tubes	106
6.3	$n$ -legged Mr Bubbles and a discrete $z^\alpha$	109
7	Acknowledgements	111
	Bibliography	112
<b>5</b>	<b>Discrete Indefinite Affine Spheres</b>	<b>113</b>
	<i>Alexander I. Bobenko</i>	
	<i>Wolfgang K. Schief</i>	
1	Introduction	113
2	Classical affine spheres	114
3	Discrete affine spheres	116
4	Discrete surfaces generated by the Tzitzeica transformation	121
5	The Bäcklund transformation	125
6	Loop group description	126
7	Particular discrete affine spheres	131
	Bibliography	136
<b>6</b>	<b>Geometry of Discrete Curves and Lattices and Integrable Difference Equations</b>	<b>139</b>
	<i>Adam Doliwa</i>	
	<i>Paolo Maria Santini</i>	
1	Introduction	139
2	Discrete curves	140
2.1	Discrete curves in $S^3$ and the Sym formula	140
2.2	Integrable dynamics of discrete curves	143
2.3	Associated integrable spin chains	145
3	Discrete Toda system as an integrable discrete-time motion of a quadrilateral surface	146
4	Multidimensional quadrilateral lattices (MQL)	148
4.1	Integrability of multidimensional quadrilateral lattices	148
4.2	Multidimensional circular lattices	151
	Bibliography	152

## II CLASSICAL SYSTEMS

<b>7</b>	<b><math>R</math>-matrices and Integrable Discretizations</b>	<b>157</b>
	<i>Yuri B. Suris</i>	
1	Introduction	157
	First part: Theory	159
2	Hierarchies of Lax equations and $R$ -operators	159
3	Hamiltonian and bi-Hamiltonian structures	160
4	$R$ -operators from a splitting $\mathfrak{g} = \mathfrak{g}_+ \oplus \mathfrak{g}_-$	163
5	Discrete time evolution	166

6	Recipe for integrable discretization	167
	Second part: Examples	168
7	Example 1: Toda lattice	168
	7.1 Newtonian equations of motion and Flaschka variables	168
	7.2 The modified Toda lattice	169
	7.3 Lax representation	170
	7.4 Discretization of the Toda lattice in the variables $(a, b)$	172
	7.5 Discrete Newtonian equations of motion	173
8	Example 2: relativistic Toda lattice	177
	8.1 Newtonian equations of motion and the $(c, d)$ variables	177
	8.2 New systems related to the RTL	179
	8.3 Lax representations	180
	8.4 Discretization of the RTL flows in the $(c, d)$ variables	182
	8.5 Discrete Newtonian equations of motion for the $H_2^{(\pm)}$ flows	185
	8.6 Discrete Newtonian equations of motion for the $H_1^{(\pm)}$ flows	188
9	Example 3: Bogoyavlensky lattices	192
	9.1 Equations of motion and Lax representations	192
	9.2 A discretization of the BL1	194
	9.3 A discretization of the BL2	196
10	Example 4: peakons lattice	198
	10.1 Equations of motion and Lax representation	198
	10.2 Discretization of the peakons lattice	200
11	Concluding remarks	203
	Acknowledgements	203
	Bibliography	203
<b>8</b>	<b>Discrete Painlevé Equations and Symmetry Reduction on the Lattice</b>	<b>209</b>
	<i>Frank W. Nijhoff</i>	
	1 Introduction	209
	2 Symmetries and integrability of partial difference equations	212
	3 Symmetries of the lattice KdV family	215
	4 The lattice Boussinesq family	220
	4.1 IVPs for the BSQ family	227
	Bibliography	230
<b>9</b>	<b>Lagrangian Description of Doubly Discrete Sine-Gordon Type Models</b>	<b>235</b>
	<i>Nadja Kutz</i>	

1	Introduction of the model	235
2	Discrete forms on space-time	236
3	Phase space and symplectic current	237
4	Lagrangian description	239
	Bibliography	242

### III QUANTUM SYSTEMS

<b>10</b>	<b>Spectra of Quantum Integrals</b>	<b>247</b>
	<i>Johannes Kellendonk</i>	
	<i>Nadja Kutz</i>	
	<i>Ruedi Seiler</i>	
	Introduction	247
1	Discrete Weyl-Heisenberg algebra	251
	1.1 Definition of the discrete Weyl-Heisenberg algebra	251
	1.2 Discrete quantum mechanics: the Weyl-Schrödinger representation	252
	1.3 Discrete magnetic translations	253
	1.4 Irreducible representations	255
2	Computing spectra for rational flux	258
	2.1 Chambers relation	259
3	Models of Hofstadter type and quantum integrals	260
	3.1 Hamiltonians of Hofstadter type	260
	3.2 Automorphisms of the discrete Weyl-Heisenberg algebra and quantum integrals	261
	3.3 Chambers relation for $H(a, b, k)$	263
4	Polynomial solutions to the eigenvalue equation	264
	4.1 Polynomial solutions for rational flux	268
	4.2 Polynomial solutions depending analytically on the flux	269
	4.3 Application to the Hofstadter Hamiltonian and QP integrals	270
	4.4 Relating the Hofstadter Hamiltonian to the QP integral	272
5	Discrete sine-Gordon field theory	274
	5.1 Sine-Gordon theory as gauge theory	274
	5.2 Classical dynamics and Poisson structure for the sine-Gordon field	277
	5.3 Quantization	278
	5.4 Quantum dynamics of the sine-Gordon field	279
	5.5 Quantum integrals for periodic boundary conditions	283
	5.6 Quantum integrals of the (discrete) quantum pendulum	283

6	Algebraic Bethe ansatz for the SG integral	286
6.1	Bethe ansatz ground state	287
6.2	Bethe ansatz equations	288
6.3	Bethe ansatz for reductions of the SG integral	289
6.4	Positioning of the Bethe ansatz eigenvalues in bands of the spectrum of the QP integral	291
7	Comparison	294
	Bibliography	294
<b>11</b>	<b>Algebraic Quantization of Integrable Models in Discrete Space–Time</b>	<b>301</b>
	<i>Ludwig D. Faddeev</i>	
	<i>Alexandre Yu. Volkov</i>	
1	Introduction	301
2	Classical differential equation	302
3	Classical difference equation	303
4	Algebra of observables i	305
5	Evolution operator i	306
6	q-exponent	307
7	A different angle	308
8	Algebra of observables ii	309
9	Evolution operator ii	309
10	Classical continuum limit	312
11	Conservation laws	313
12	Conclusion	318
	Bibliography	318
<b>12</b>	<b>Affine Toda Field Theory as a Three-dimensional Inte- grable System</b>	<b>321</b>
	<i>Rinat M. Kashaev</i>	
	<i>Nikolai Yu. Reshetikhin</i>	
1	Introduction	321
2	Discrete space–time Toda field theory	323
2.1	Notation	324
2.2	Discrete Toda equations	324
3	Evolution operator and integrals of motion	326
3.1	The evolution operator	326
3.2	The $L$ -operator	328
3.3	The Lax pair and the integrals of motion	329
4	Discrete Toda field theory as a three-dimensional system	332
5	The $N \rightarrow \infty$ limit as a three-dimensional thermodynamic limit	334
5.1	The free energy	334
5.2	The thermodynamic limit	336
6	Conclusion	337
6.1	The continuum limit	337

6.2	Open problems	338
	Acknowledgement	339
	Bibliography	339
<b>13</b>	<b>Quantum Hyperbolic Invariants of Knots</b>	<b>343</b>
	<i>Rinat M. Kashaev</i>	
1	Introduction	343
2	Cyclic representations of the Weyl algebra	344
2.1	Cyclic representations	345
2.2	Clebsh–Gordan coefficients	346
2.3	$6j$ -symbols	347
3	Construction of knot invariants	349
3.1	Decoration and tetrahedral symmetry	349
3.2	Topological quantum field theory	352
3.3	The hyperbolic volume	355
4	Concluding remarks	357
	Bibliography	358
<b>14</b>	<b>Charge Transport in the Discretized Landau Model</b>	<b>361</b>
	<i>Thomas Richter</i>	
	<i>Ruedi Seiler</i>	
	Bibliography	365
	<b>Index</b>	<b>367</b>
