Auch ging es mir, wie jedem, der reisend oder lebend mit Ernst gehandelt, daß ich in dem Augenblicke des Scheidens erst einigermaßen mich wert fühlte, hereinzutreten. Mich trösteten die mannigfaltigen und unentwickelten Schätze, die ich mir gesammelt.

G.

Preface

This book is based on several courses given by the authors since 1966. It introduces the reader to the representation theory of compact Lie groups.

We have chosen a geometrical and analytical approach since we feel that this is the easiest way to motivate and establish the theory and to indicate relations to other branches of mathematics. Lie algebras, though mentioned occasionally, are not used in an essential way. The material as well as its presentation are classical; one might say that the foundations were known to Hermann Weyl at least 50 years ago.

Prerequisites to the book are standard linear algebra and analysis, including Stokes' theorem for manifolds. The book can be read by German students in their third year, or by first-year graduate students in the United States.

Generally speaking the book should be useful for mathematicians with geometric interests and, we hope, for physicists.

At the end of each section the reader will find a set of exercises. These vary in character: Some ask the reader to verify statements used in the text, some contain additional information, and some present examples and counterexamples. We advise the reader at least to read through the exercises.

The book is organized as follows. There are six chapters, each containing several sections. A reference of the form III, (6.2) refers to Theorem (Definition, etc.) (6.2) in Section 6 of Chapter III. The roman numeral is omitted whenever the reference concerns the chapter where it appears. References to the Bibliography at the end of the book have the usual form, e.g. Weyl [1].

Naturally, we would have liked to write in our mother tongue. But we hope that our English will be acceptable to a larger mathematical community, although any personal manner may have been lost and we do not feel competent judges on matters of English style.

Arunas Liulevicius, Wolfgang Lück, and Klaus Wirthmüller have read the manuscript and suggested many improvements. We thank them for their generous help. We are most grateful to Robert Robson who translated part of the German manuscript and revised the whole English text.

Contents

CHAPTER I	
Lie Groups and Lie Algebras	1
1. The Concept of a Lie Group and the Classical Examples	1
2. Left-Invariant Vector Fields and One-Parameter Groups	11
3. The Exponential Map	22
4. Homogeneous Spaces and Quotient Groups	30
5. Invariant Integration	40
6. Clifford Algebras and Spinor Groups	54
CHAPTER II	
Elementary Representation Theory	64
1. Representations	65
2. Semisimple Modules	72
3. Linear Algebra and Representations	74
4. Characters and Orthogonality Relations	77
5. Representations of $SU(2)$, $SO(3)$, $U(2)$, and $O(3)$.	84
6. Real and Quaternionic Representations	93
7. The Character Ring and the Representation Ring	102
8. Representations of Abelian Groups	107
9. Representations of Lie Algebras	111
10. The Lie Algebra $\mathfrak{sl}(2, \mathbb{C})$	115
CHAPTER III	
Representative Functions	123
1. Algebras of Representative Functions	123
2. Some Analysis on Compact Groups	129
3. The Theorem of Peter and Weyl	133
4. Applications of the Theorem of Peter and Weyl	136
5. Generalizations of the Theorem of Peter and Weyl	138
6. Induced Representations	143

7. Tannaka–Kreĭn Duality	146
8. The Complexification of Compact Lie Groups	151
CHAPTER IV	
The Maximal Torus of a Compact Lie Group	157
1. Maximal Tori	157
2. Consequences of the Conjugation Theorem	164
3. The Maximal Tori and Weyl Groups of the Classical Groups	169
4. Cartan Subgroups of Nonconnected Compact Groups	176
CHAPTER V	
Root Systems	183
1. The Adjoint Representation and Groups of Rank 1	183
2. Roots and Weyl Chambers	189
3. Root Systems	197
4. Bases and Weyl Chambers	202
5. Dynkin Diagrams	209
6. The Roots of the Classical Groups	216
7. The Fundamental Group, the Center and the Stiefel Diagram	223
8. The Structure of the Compact Groups	232
CHAPTER VI	
Irreducible Characters and Weights	239
1. The Weyl Character Formula	239
2. The Dominant Weight and the Structure of the Representation Ring	249
3. The Multiplicities of the Weights of an Irreducible Representation	257
4. Representations of Real or Quaternionic Type	261
5. Representations of the Classical Groups	265
6. Representations of the Spinor Groups	278
7. Representations of the Orthogonal Groups	292
Bibliography	299
Symbol Index	305
Subject Index	307
