## Contents

	<i>page</i>
<i>List of Figures</i>	viii
<i>Preface</i>	xi
<b>1 Topological Roots</b>	<b>1</b>
1.1 Basics from Topology	1
1.2 Middle Third Cantor Set	9
<b>2 Measure Theoretic Roots</b>	<b>12</b>
2.1 Basics of Lebesgue Measure on $\mathbb{R}$	12
2.2 A Nonmeasurable Set	15
2.3 Lebesgue Measure of Cantor Sets	16
2.3.1 The Middle Third Cantor Set	16
2.3.2 Other Cantor Sets	17
2.4 Sets of Lebesgue Measure Zero	18
<b>3 Beginning Symbolic and Topological Dynamics</b>	<b>19</b>
3.1 Periodic Behavior	20
3.2 Nonwandering and $\omega$ -Limit Sets	24
3.3 Topological Conjugacy	33
3.4 Transitive Behavior	35
3.5 Recurrence	42
3.6 Shift Spaces	46
<b>4 Beginning Measurable Dynamics</b>	<b>52</b>
4.1 Preliminaries	52
4.2 Measurable Maps on $I$	53
4.3 Poincaré Recurrence	56
4.4 Ergodicity	58
4.4.1 Integration of Measurable Functions	60

Table of Contents

[More information](#)

4.4.2 Averaging Measurable Functions Along Orbits	62
4.4.3 A Connection to Topological Dynamics	65
<b>5 A First Example: The <math>2^\infty</math> Map</b>	<b>66</b>
5.1 Logistic Family	66
5.2 A Bit of Combinatorics	68
5.3 Construction of the Cantor Set $\omega(c, g)$	68
5.4 Cantor Set and Adding Machines	70
5.5 A Toeplitz Sequence	73
<b>6 Kneading Maps</b>	<b>74</b>
6.1 Hofbauer Towers and Kneading Maps	74
6.2 First Uses of Kneading Maps	80
6.3 Shadowing	85
6.4 Examples of Kneading Maps	87
<b>7 Some Number Theory</b>	<b>92</b>
7.1 Farey Tree	92
7.2 Continued Fractions	96
7.3 Continued Fractions and the Farey Tree	98
<b>8 Circle Maps</b>	<b>101</b>
8.1 Circle Homeomorphisms	101
8.2 Degree One Circle Maps	105
8.3 Irrational Rotations and Return Maps	111
8.4 Cantor Thread	114
<b>9 Topological Entropy</b>	<b>117</b>
9.1 Basic Properties of Topological Entropy	118
9.2 Entropy of Subshifts	123
9.3 Lapnumbers and Markov Extensions	129
9.4 Lapnumbers and Entropy	136
9.5 Semiconjugacy to a Piecewise Linear Map	140
9.6 The Monotonicity Problem	144
<b>10 Symmetric Tent Maps</b>	<b>147</b>
10.1 Preliminary Combinatorics	148
10.2 $\omega$ -Limit Sets	153
10.3 Phase Portrait	157
10.4 Measure Results	165
10.5 Slow Recurrence and the CE Condition	168
10.6 Attractors	172
10.7 Combinatorics and Renormalization	174
<b>11 Unimodal Maps and Rigid Rotations</b>	<b>178</b>
11.1 Adding Machines in Unimodal Maps	178
11.2 Rigid Rotations in Unimodal Maps – I	184
11.3 Rigid Rotations in Unimodal Maps – II	186

## CONTENTS

vii

<b>12</b>	<b><math>\beta</math>-Transformations, Unimodal Maps, and Circle Maps</b>	<b>193</b>
12.1	$\beta$ -Transformations and $\beta$ -Expansions	193
12.2	Flip-Half-of-the-Graph Trick	195
12.3	A Relation Between Unimodal Maps and Circle Maps	197
12.4	Comparing $\beta$ -Transformations and Tent Maps	203
12.5	Ledrappier's Example	208
12.6	Maps with Slope $< 2$	211
<b>13</b>	<b>Homeomorphic Restrictions in the Unimodal Setting</b>	<b>216</b>
13.1	First Observations	218
13.2	A $2^\infty$ Trapezoidal Map	220
13.3	The Adding Machine ( $\Omega$ , $P$ )	225
13.4	The Case $Q(k) \rightarrow \infty$	238
<b>14</b>	<b>Complex Quadratic Dynamics</b>	<b>250</b>
14.1	Julia Sets and External Rays	251
14.2	The Mandelbrot Set	262
14.3	Itineraries and Hubbard Trees	266
<i>Bibliography</i>		279
<i>Index</i>		292
