Contents

Chapter 1. Basic concepts of ill-posed problem theory **1**
1.1. Classical well-posedness and Tikhonov's well-posedness 1
1.2. Simplest properties of the well-posedness set and the continuity modulus. Connection with estimates of the interpolation type 6
1.3. Projection on the convex closed set. Quasisolution 11
1.4. The structure of correctness sets 14
1.5. Regularizators and regularising operator sets 17
1.6. Final remarks 20

Chapter 2. Linear Volterra operators and their properties **23**
2.1. Abstract Volterra operators 23
2.2. Completely continuous Volterra operators in a Hilbert space 29
2.3. Operators $\mathcal{J}^\alpha$ and their properties 36
2.4. Classical uniqueness and stability theorems 43
2.5. $\sigma(A)$ estimates and σ-continuity criteria 46

Chapter 3. Linear operator Volterra equations **55**
3.1. Operator Volterra equations in the scales of Banach spaces 55
3.2. Operator Volterra equations of the first kind 63
3.3. Operator Volterra equation of the first kind with the nondifferentiable kernel 69
3.4. Examples of scales of Banach spaces 72
3.5. Examples of operator Volterra equations 78

Chapter 4. Nonlinear operator Volterra equations in the scales of Banach spaces **81**
4.1. Formulations of the basic theorems 82
4.2. Definitions and auxiliary statements 84
4.3. Proofs of the basic theorems 89
4.4. Inverse kinematic problem of seismology 95

Materiale protetto da copyright

Chapter 5. Abstract integro-differential equations and inverse problems **99**
5.1. Basic estimates 99
5.2. Uniqueness and stability of solution of integro-differential equations and inequalities 108
5.3. The problem of determining the right side of the evolutionary equation 112
5.4. Evolutionary equation of the second order 116
5.5. Operator Volterra equations with commuting kernels 118

Chapter 6. Multidimensional inverse problems **127**
6.1. Inverse problems, commutators and *a priori* estimates 127
6.2. Theorems of decomposition 133
6.3. Examples of inverse problems that admit decomposition 138

Chapter 7. Multidimensional integro-differential equations of Volterra type **143**
7.1. Statement of the problem 144
7.2. Necessary conditions 147
7.3. Sufficient conditions 151

Chapter 8. Inverse problems of wave propagation and scattering **157**
8.1. The inverse problem of wave propagation in layered media 157
8.2. The problem of determining the right side of the Lameé equations 164
8.3. Statement of the inverse scattering on the barrier problems 176
8.4. Definitions and auxiliary facts 179
8.5. Uniqueness of the inverse scattering problem in the Kirchhoff approximation 184
8.6. Problems of coefficients determination 188

Bibliography **193**
