|---|-----|
| Preface | xi |
| Introduction | 1 |
| Jean Bourgain, Nonlinear Schrödinger Equations | 3 |
| Introduction | 5 |
| Lecture 1. Generalities and Initial Value Problems | 7 |
| Comments and references related to Lecture 1 | 14 |
| Lecture 2. The Initial Value Problem (continued) | 15 |
| Proof of Theorem 1.36 | 20 |
| Comments on the proofs of Theorems 1.37, 1.40, 1.41 | 25 |
| Addition to Lecture 2, Remarks on the growth of higher Sobolev norms | 29 |
| Comments and references related to Lecture 2 | 33 |
| Lecture 3. A Digression: The Initial Value Problem for the KdV Equation | 35 |
| Comments and references related to Lecture 3 | 40 |
| Lecture 4. 1D Invariant Gibbs Measures | 41 |
| Comments and references related to Lecture 4 | 49 |
| Lecture 5. Invariant Measures (2D) | 51 |
| Comments and references related to Lecture 5 | 67 |
| Lecture 6. Quasi-Periodic Solutions of Hamiltonian PDE | 69 |
| Introduction | 69 |
| Comments | 84 |
| Some references related to Lecture 6 | 85 |
| Lecture 7. Time Periodic Solutions | 87 |
| Comments and references related to Lecture 7 | 100 |
| Lecture 8. Time Quasi-Periodic Solutions | 101 |
| Further comments | 113 |
| References and comments | 116 |
| Lecture 9. Normal Forms | 117 |
| Reference | 126 |
| Lecture 10. Applications of Symplectic Capacities to Hamiltonian PDE | 127 |
| Comments and references related to Lecture 10 | 138 |

| | |
|---|---------|
| Appendix | 141 |
| Remarks on longtime behaviour of the flow of Hamiltonian PDE | 141 |
| References to Appendix | 157 |
| Ingrid C. Daubechies and Anna C. Gilbert, Harmonic Analysis, Wavelets and Applications | 159 |
| Lecture 1. Introduction | 161 |
| Lecture 2. Constructing Orthonormal Wavelet Bases: Multiresolution Analysis | 169 |
| Lecture 3. Wavelet Bases: Construction and Algorithms | 175 |
| Lecture 4. More Wavelet Bases | 183 |
| Lecture 5. Wavelets in Other Functional Spaces | 191 |
| Lecture 6. Pointwise Convergence for Wavelet Expansions | 199 |
| Lecture 7. Two-Dimensional Wavelets and Operators | 205 |
| Lecture 8. Wavelets and Differential Equations | 215 |
| References | 225 |
| Susan Friedlander, Lectures on Stability and Instability of an Ideal Fluid | 227 |
| Introduction | 229 |
| Lecture 1. Equations of Motion | 233 |
| 1.1. Ideal fluid model | 233 |
| 1.2. Euler equations | 234 |
| 1.3. Lagrangian trajectories and streamlines | 235 |
| 1.4. Vorticity | 235 |
| Lecture 2. Initial-Boundary Value Problem | 237 |
| 2.1. Existence and uniqueness theorems | 238 |
| 2.2. Navier-Stokes equations | 239 |
| Lecture 3. The Type of the Euler Equations | 241 |
| 3.1. Linearized Euler equations | 241 |
| 3.2. Computation of principal symbol | 241 |
| 3.3. Wave motion supported by linearized Euler equations | 244 |
| Lecture 4. Vorticity | 247 |
| 4.1. Vorticity and stream function in two dimensions | 248 |
| 4.2. Extra complications in three dimensions | 250 |
| 4.3. Vorticity theorems | 250 |
| 4.4. Helmholtz Vortex Theorems | 252 |
| 4.5. Role of vorticity in PDE theory of Euler equations | 255 |
| Lecture 5. Steady Flows | 257 |

| | |
|---|------------|
| 5.1. Two dimensional case | 257 |
| 5.2. Three dimensional case | 258 |
| Lecture 6. Stability/Instability of an Equilibrium State | 263 |
| 6.1. Linear stability (instability) | 263 |
| 6.2. Nonlinear (Lyapunov) stability | 265 |
| Lecture 7. Two-Dimensional Spectral Problem | 267 |
| Lecture 8. “Arnold” Criterion for Nonlinear Stability | 271 |
| Lecture 9. Plane Parallel Shear Flow | 273 |
| Lecture 10. Instability in a Vorticity Norm | 277 |
| Lecture 11. Sufficient Condition for Instability | 279 |
| Lecture 12. Exponential Stretching | 285 |
| Lecture 13. Integrable Flows | 289 |
| Lecture 14. Baroclinic Instability | 291 |
| Lecture 15. Nonlinear Instability Conclusion | 295 296 |
| References | 299 |
| George Papanicolaou and Leonid Ryzhik, Waves and Transport | 305 |
| Lecture 1. Introduction | 307 |
| 1.1. The geophysical problem | 307 |
| 1.2. Radiative transport equations | 309 |
| 1.3. Transport theory for electromagnetic waves | 311 |
| 1.4. Transport theory for elastic waves | 313 |
| 1.5. Brief outline | 316 |
| Lecture 2. The Schrödinger Equation | 317 |
| 2.1. The Schrödinger equation | 317 |
| 2.2. Standard high frequency asymptotics | 318 |
| 2.3. The Wigner distribution | 320 |
| 2.4. General properties of the Wigner distribution | 322 |
| 2.5. Convergence of energy | 325 |
| Lecture 3. Symmetric Hyperbolic Systems | 327 |
| 3.1. General symmetric hyperbolic systems | 327 |
| 3.2. High frequency approximation for acoustic waves | 332 |
| 3.3. Geometrical optics for electromagnetic waves | 336 |
| 3.4. High frequency approximation for elastic waves | 338 |
| Lecture 4. Waves in Random Media | 343 |
| 4.1. The Schrödinger equation | 343 |
| 4.2. Transport equations without polarization | 346 |
| 4.3. Transport equations with polarization | 350 |

| | |
|---|---------|
| 4.4. Transport equations for acoustic waves | 351 |
| 4.5. Transport equations for electromagnetic waves | 351 |
| 4.6. Transport equations for elastic waves | 353 |
| Lecture 5. The Diffusion Approximation | 359 |
| 5.1. Diffusion approximation for acoustic waves | 359 |
| 5.2. Diffusion approximation for electromagnetic waves | 362 |
| 5.3. Diffusion approximation for elastic waves | 363 |
| Lecture 6. The Geophysical Applications | 367 |
| 6.1. Introduction | 367 |
| 6.2. Radiative transport equations | 368 |
| 6.3. Transport theory for elastic waves | 371 |
| 6.4. Summary | 377 |
| References | 379 |
| Jeffrey Rauch with the assistance of Markus Keel, Lectures on Geometric Optics | 383 |
| Lecture 1. Introduction | 385 |
| Lecture 2. Basic Linear Existence Theorems | 389 |
| 2.1. Energy estimates for symmetric hyperbolic systems | 389 |
| 2.2. Existence theorems for symmetric hyperbolic systems | 393 |
| 2.3. Finite speed of propagation | 395 |
| 2.4. Plane waves, characteristic variety and finite speed | 397 |
| 2.5. Solutions on cones of determinacy | 399 |
| Lecture 3. Examples of Propagation of Singularities and of Energy | 401 |
| 3.1. Examples | 402 |
| Lecture 4. Elliptic Geometric Optics | 407 |
| 4.1. Constant coefficients and linear phases | 407 |
| 4.2. Iterative improvement for variable coefficients and nonlinear phases | 408 |
| 4.3. Formal asymptotics approach | 410 |
| 4.4. Perturbation approach | 413 |
| 4.5. Elliptic Regularity Theorem | 414 |
| Lecture 5. Linear Hyperbolic Geometric Optics | 417 |
| 5.1. Constant coefficients and linear phases | 417 |
| 5.2. Scalar constant coefficient operators and linear phases | 419 |
| 5.3. Variable coefficient systems and nonlinear phases | 420 |
| 5.4. Rays and transport | 427 |
| Lecture 6. Basic Nonlinear Existence Theorems | 431 |
| 6.1. Introduction | 431 |
| 6.2. Schauder's Lemma and Sobolev Embedding | 432 |
| 6.3. Basic existence theorem | 436 |
| 6.4. Moser's inequality and the nature of the breakdown | 438 |

| | |
|---|-----|
| Lecture 7. One Phase Nonlinear Geometric Optics | 441 |
| 7.1. Amplitudes and harmonics | 441 |
| 7.2. More on the generation of harmonics | 444 |
| 7.3. Formulating the ansatz | 445 |
| 7.4. Equations for the profiles | 446 |
| 7.5. Solving the profile equations | 449 |
| 7.6. Rays and nonlinear transport | 453 |
| Lecture 8. Justification of One Phase Nonlinear Geometric Optics | 457 |
| 8.1. The spaces $H_\epsilon^s(\mathbb{R}^d)$ | 457 |
| 8.2. H_ϵ^s estimates for linear symmetric hyperbolic systems | 460 |
| 8.3. Justification of the nonlinear asymptotics | 461 |
| References | 465 |
