

Calculus of Variations, Homogenization and Continuum Mechanics

Proceedings of the Workshop

Guy Bouchitté, Giuseppe Buttazzo and Pierre Suquet

Contents

- Preface
- List of Speakers
- Non-Occurrence of Gap for One-Dimensional Autonomous Functionals
- A Remark on Trace Bounds for Elastic Composite Materials
- On Homogenization of Ordinary Differential Equations and Linear Transport Equations
- Recession Operators and Solvability of Variational Problems in Reflexive Banach Spaces
- Effective Behaviour of a Porous Medium Containing a Thin Fissure
- Approximation of Relaxed Dirichlet Problems
- Effective Moduli of Strongly Heterogeneous Composites
- Shape Optimization for Elliptic Problems under Neumann Boundary Conditions
- Free Gradient Discontinuities
- Variational Problems with Potential Wells and Nonhomogeneous Boundary Conditions
- Some Recent Results on Polyconvex, Quasiconvex and Rank One Convex Functions
- Dirichlet Problems in Perforated Domains for Homogeneous Monotone Operators on H_0^1
- Lower Semicontinuity of Energy Functionals Depending on Elastic Strain and Chemical Composition
- Sensitivity Analysis and Viscosity Method for Some Problems of the Calculus of Variations
- Everywhere Regularity for Some Variational Vector Valued Problems
- Homogenization of First Order Differential Operators
- Multicomponent Homogenized Model for Strongly Nonhomogeneous Structures
- Existence and Bang-Bang Theorems for Control Problems Governed by Hyperbolic Equations
- Remarks on Optimal Design Problems
