

Table of contents

Preface.....	xi
Basic Notations and Recalls.....	1
1 Elements of Convex Analysis.....	9
1.1 Convex Sets and Functions.....	9
1.2 Convex and Lower Semicontinuous Envelopes in $\mathbf{R}^n$	23
1.3 Lower Semicontinuous Envelopes of Convex Envelopes.....	29
1.4 Convex Envelopes of Lower Semicontinuous Envelopes.....	35
2 Elements of Measure and Increasing Set Functions Theories.....	45
2.1 Measures and Integrals.....	45
2.2 Basics on L^p Spaces.....	55
2.3 Derivation of Measures.....	60
2.4 Abstract Measure Theory in Topological Settings.....	63
2.5 Local Properties of Boundaries of Open Subsets of $\mathbf{R}^n$	67
2.6 Increasing Set Functions.....	70
2.7 Increasing Set Functionals.....	79
3 Minimization Methods and Variational Convergences.....	83
3.1 The Direct Methods in the Calculus of Variations.....	83
3.2 Γ -Convergence.....	87
3.3 Applications to the Calculus of Variations.....	94
3.4 Γ -Convergence in Topological Vector Spaces and of Increasing Set Functionals.....	99
3.5 Relaxation.....	102
4 BV and Sobolev Spaces.....	107
4.1 Regularization of Measures and of Summable Functions.....	107
4.2 BV Spaces.....	113
4.3 Sobolev Spaces.....	121
4.4 Some Compactness Criteria.....	130

4.5 Periodic Sobolev Functions	134
5 Lower Semicontinuity and Minimization of Integral Functionals	137
5.1 Functionals on BV Spaces	137
5.2 Functionals on Sobolev Spaces	142
5.3 Minimization of Integral Functionals	144
6 Classical Results and Mathematical Models Originating	
Unbounded Functionals	149
6.1 Classical Unique Extension Results	149
6.2 Classical Integral Representation Results	150
6.3 Classical Relaxation Results	153
6.4 Classical Homogenization Results	155
6.5 Mathematical Aspects of Some Physical Models Originating	
Unbounded Functionals	157
7 Abstract Regularization and Jensen's Inequality	159
7.1 Integral of Functions with Values in Locally Convex	
Topological Vector Spaces	159
7.2 On the Definition of a Functional on Functions and on Their	
Equivalence Classes	163
7.3 Regularization of Functions in Locally Convex Topological	
Vector Subspaces of $L^1_{\text{loc}}(\mathbf{R}^n)$	165
7.4 Applications to Convex Functionals on BV Spaces	169
8 Unique Extension Results	177
8.1 Unique Extension Results for Inner Regular Functionals	178
8.2 Existence and Uniqueness Results	180
8.3 Unique Extension Results for Measure Like Functionals	182
8.4 Some Applications	186
8.5 A Note on Lavrentiev Phenomenon	189
9 Integral Representation for Unbounded Functionals	191
9.1 Representation on Linear Functions	191
9.2 Representation on Continuously Differentiable Functions	192
9.3 Representation on Sobolev Spaces	199
9.4 Representation on BV Spaces	207
10 Relaxation of Unbounded Functionals	211
10.1 Notations and Elementary Properties of Relaxed Functionals	
in the Neumann Case	211
10.2 Relaxation of Neumann Problems: the Case of Bounded	
Effective Domain with Nonempty Interior	214
10.3 Relaxation of Neumann Problems: the Case of Bounded	
Effective Domain with Empty Interior	219

10.4 Relaxation of Neumann Problems: a First Result without Boundedness Assumptions on the Effective Domain.....	226
10.5 Relaxation of Neumann Problems: Relaxation in BV Spaces.....	229
10.6 Notations and Elementary Properties of Relaxed Functionals in the Dirichlet Case.....	232
10.7 Relaxation of Dirichlet Problems.....	234
10.8 Applications to Minimum Problems.....	246
10.9 Additional Remarks on Integral Representation on the Whole Space of Lipschitz Functions.....	253
11 Cut-off Functions and Partitions of Unity.....	261
11.1 Cut-off Functions.....	261
11.2 Partitions of Unity.....	269
12 Homogenization of Unbounded Functionals.....	273
12.1 Notations and Basic Results.....	274
12.2 Some Properties of Γ -Limits.....	280
12.3 Finiteness Conditions.....	287
12.4 Representation on Linear Functions.....	293
12.5 A Blow-up Condition.....	306
12.6 Representation Results.....	307
12.7 Applications to the Convergence of Minima and of Minimizers.....	311
13 Homogenization of Unbounded Functionals with Special Constraints.....	319
13.1 Homogenization with Fixed Constraints: the Case of Neumann Boundary Conditions.....	319
13.2 Homogenization with Fixed Constraints: the Case of Dirichlet Boundary Conditions.....	328
13.3 Homogenization with Fixed Constraints: the Case of Mixed Boundary Conditions.....	331
13.4 Homogenization with Fixed Constraints: Applications to the Convergence of Minima and of Minimizers.....	335
13.5 Homogenization with Oscillating Special Constraints.....	345
13.6 Final Remarks.....	351
14 Some Explicit Computations of Homogenized Energies in Mathematical Models Originating Unbounded Functionals.....	353
14.1 Homogenization in Elastic-Plastic Torsion.....	353
14.2 Homogenization in the Modelling of Nonlinear Elastomers...	359
14.3 Homogenization in Electrostatic Screening.....	364
Bibliography.....	375

List of Symbols	389
Index	391
