A Field Guide to Algebra
Chambert-Loir, A.
2005, X, 198 p., Hardcover
ISBN: 978-0-387-21428-3

Contents

1 Field extensions 1
1.1 Constructions with ruler and compass 1
1.2 Fields 3
1.3 Field extensions 9
1.4 Some classical impossibilities 15
1.5 Symmetric functions 19
1.6 Appendix: Transcendence of e and π 22
Exercises 26

2 Roots 31
2.1 Ring of remainders 31
2.2 Splitting extensions 34
2.3 Algebraically closed fields; algebraic closure 35
2.4 Appendix: Structure of polynomial rings 40
2.5 Appendix: Quotient rings 43
2.6 Appendix: Puiseux's theorem 45
Exercises 50

3 Galois theory 55
3.1 Homomorphisms of an extension in an algebraic closure 55
3.2 Automorphism group of an extension 59
3.3 The Galois group as a permutation group 64
3.4 Discriminant; resolvent polynomials 68
3.5 Finite fields 73
Exercises 75

4 A bit of group theory 83
4.1 Groups (quick review of basic definitions) 83

4.2 Subgroups 84
4.3 Group actions 86
4.4 Normal subgroups; quotient groups 87
4.5 Solvable groups; nilpotent groups 90
4.6 Symmetric and alternating groups 92
4.7 Matrix groups 96
Exercises 100

5 Applications 107
5.1 Constructibility with ruler and compass 107
5.2 Cyclotomy 108
5.3 Composite extensions 113
5.4 Cyclic extensions 116
5.5 Equations with degrees up to 4 118
5.6 Solving equations by radicals 125
5.7 How (not) to compute Galois groups 129
5.8 Specializing Galois groups 132
5.9 Hilbert's irreducibility theorem 139
Exercises 145

6 Algebraic theory of differential equations 151
6.1 Differential fields 151
6.2 Differential extensions; construction of derivations 154
6.3 Differential equations 158
6.4 Picard-Vessiot extensions 160
6.5 The differential Galois group; examples 164
6.6 The differential Galois correspondence 169
6.7 Integration in finite terms, elementary extensions 170
6.8 Appendix: Hilbert's Nullstellensatz 177
Exercises 179

Examination problems 181
