Preface	ix
Chapter 1. The Beginning of the Theory	1
§1. The Minimal Surface Equation and Minimal Submanifolds	1
§2. Examples of Minimal Surfaces in \mathbb{R}^3	8
§3. Consequences of the First Variation Formula	18
§4. The Gauss Map	28
§5. The Theorem of Bernstein	29
§6. The Weierstrass Representation	33
§7. The Strong Maximum Principle	37
§8. Second Variation Formula, Morse Index, and Stability	38
§9. Multi-valued Graphs	50
§10. Local Examples of Multi-valued Graphs	51
Appendix: The Harnack Inequality	60
Appendix: The Bochner formula	60
Chapter 2. Curvature Estimates and Consequences	65
§1. Simons' Inequality	66
§2. Small Energy Curvature Estimates for Minimal Surfaces	72
§3. Curvature and Area	76
§4. L^p Bounds of $ \mathbf{A} ^2$ for Stable Hypersurfaces	85
§5. Bernstein Theorems and Curvature Estimates	87
§6. The General Minimal Graph Equation	88
§7. Almost Stability	92

§8. Sublinear Growth of the Separation	97
§9. Minimal Cones	101
Chapter 3. Weak Convergence, Compactness and Applications	105
§1. The Theory of Varifolds	106
§2. The Sobolev Inequality	113
§3. The Weak Bernstein-Type Theorem	119
§4. General Constructions	120
§5. Finite Dimensionality	124
§6. Bubble Convergence Implies Varifold Convergence	128
Chapter 4. Existence Results	133
§1. The Plateau Problem	133
§2. The Dirichlet Problem	137
§3. The Solution to the Plateau Problem	142
§4. Branch Points	147
§5. Harmonic Maps	148
§6. Existence of Minimal Spheres in a Homotopy Class	153
Chapter 5. Min-max Constructions	163
§1. Sweepouts by Curves	163
§2. Birkhoff's Curve Shortening Process	164
§3. Existence of Closed Geodesics and the Width	171
§4. Harmonic Replacement	176
§5. Minimal Spheres and the Width	190
Chapter 6. Embedded Solutions of the Plateau problem	201
§1. Unique Continuation	201
§2. Local Description of Nodal and Critical Sets	207
§3. Absence of True Branch Points	215
§4. Absence of False Branch Points	217
§5. Embedded Solutions of the Plateau Problem	224
Chapter 7. Minimal Surfaces in Three-Manifolds	233
§1. The Minimal Surface Equation in a Three-Manifold	233
§2. Hersch's and Yang and Yau's Theorems	239
§3. The Reilly Formula	242
§4. Choi and Wang's Lower Bound for λ_1	243

§5. Compactness Theorems with A Priori Bounds	244
§6. The Positive Mass Theorem	251
§7. Extinction of Ricci Flow	255
Chapter 8. The Structure of Embedded Minimal Surfaces	261
§1. Disks that are Double-spiral Staircases	261
§2. One-sided Curvature Estimate	276
§3. Generalized Nitsche Conjecture	278
§4. Calabi-Yau Conjectures for Embedded Surfaces	282
§5. Embedded Minimal Surfaces with Finite Genus	288
Exercises	295
Bibliography	299
Index	311
