CONTENTS

Preface v

1 Mathematical models including a hysteresis operator **1**

Toyohiko Aiki

1 Introduction 1
2 Mathematical treatment for hysteresis operator 2
2.1 Play operator 2
2.2 Stop operator 4
2.3 The Duhem model 5
3 Shape memory alloys 6
4 Examples of hysteresis operator 11
4.1 Solid-liquid phase transition 11
4.2 Biological model 16
4.3 Magnetostrictive thin film multi-layers 17
References 18

2 Modelling phase transitions via an entropy equation: long-time behaviour of the solutions **21**

Elena Bonetti

1 Introduction 21
2 The model and the resulting PDE's system 23
3 Main results 30
4 The existence and uniqueness result 32
4.1 Proof of Theorem 5 33
5 Uniform estimates on $(0, +\infty)$ 35
6 The ω-limit 36
References 41

3 Global solution to a one dimensional phase transition model with strong dissipation 43

Giovanna Bonfanti and Fabio Luterotti

1 Introduction and derivation of the model 43
2 Notation and main results 48
3 Proof of Theorem 1 50
4 Proof of Theorem 2 61
References 63

4 A global in time result for an integro-differential parabolic inverse problem in the space of bounded functions 65

Fabrizio Colombo, Davide Guidetti and Vincenzo Vespri

1 Introduction 66
2 Definitions and main results 68
2.1 The main abstract result 70
2.2 An application 72
3 The weighted spaces 73
4 An equivalent fixed point system 76
5 Proof of Theorem 6 79
References 84

5 Weak solutions for Stefan problems with convections 87

Takesi Fukao

1 Introduction 87
2 Stefan problem in non-cylindrical domain with convection governed by Navier-Stokes equations 90
2.1 Classical formulation 90
2.2 Weak formulation and existence result 92
3 Transmission-Stefan problem 94
4 Mathematical modelling for the transmission problem with the Stefan and Navier-Stokes equations 95
References 99

6 Memory relaxation of the one-dimensional Cahn-Hilliard equation **101**

Stefania Gatti, Maurizio Grasselli, Alain Miranville and Vittorino Pata

1 Introduction 102
1.1 The model equation 102
1.2 The singular limit 103
1.3 The history space formulation 105
1.4 Assumptions on the memory kernel and on the nonlinearity 105
2 The dynamical system 106
3 The main result 109
4 Sketch of the proof of Theorem 4 110
References 113

7 Mathematical models for phase transition in materials with thermal memory **115**

Giorgio Gentili and Claudio Giorgi

1 Introduction 115
2 Notations and basic assumptions 118
3 Phase–field models with a modified energy balance 120
4 A phase–field model with thermal memory 122
4.1 Thermodynamic restrictions 123
4.2 Evolution equations 125
5 Phase–field models with an entropy extra–flux 127
5.1 Thermodynamic restrictions and evolution equations 128
5.2 Quasilinear theory 130
6 Appendix: quasilinear approximation 133
References 140

8 Hysteresis in a first order hyperbolic equation **141**

Jana Kopfová

1 Introduction 141
2 Hysteresis 143
3 Semigroup approach 144
4 Main result 146
References 150

9 Approximation of inverse problems related to parabolic integro-differential systems of Caginalp type **151**

Alfredo Lorenzi and Elisabetta Rocca

1 Introduction 151
2 The problem with exact data 155
2.1 The direct problem with exact data 155
2.2 The inverse problem with exact data 156
3 The inverse problem with approximate data 158
3.1 Well-posedness of the problem with approximate data 158
3.2 Uniform estimates of the solution to Problem (P_δ) . 160
4 Convergence estimates 165
5 Apppendix 170
References 175

10 Gradient flow reaction/diffusion models in phase transitions **177**

John Norbury and Christophe Girardet

1 Introduction 177
1.1 Structure and results 178
2 Canonical equations 188
3 Expansions 191
4 Γ-convergence – Steady problem 194
5 Γ-convergence – Time-dependent problem 196
6 Conclusion 198
References 199

11 New existence result for a 3-D shape memory model **201**

Irena Pawłow and Wojciech M. Zajączkowski

1 Introduction 201
1.1 Notation 206
2 Assumptions and main results 206
3 Parabolicity of the elasticity system with viscosity and capillarity 211
4 Auxiliary existence results for parabolic problems of fourth and second order 214
5 Outline of the proof of Theorem 1 215

References 223

12 Analysis of a 1-D thermoviscoelastic model with temperature-dependent viscosity 225

Robert Peyroux and Ulisse Stefanelli

1 Introduction 225
2 Notation and assumptions 228
3 Continuous problem 229
4 Continuous dependence 230
5 Approximation 231
6 Discrete well-posedness 233
7 Stability 235
8 Convergence 239
9 Error control 241
References 245

13 Global attractor for the weak solutions of a class of viscous Cahn-Hilliard equations 247

Riccarda Rossi

1 Introduction 247
1.1 Plan of the paper 251
2 Preliminaries: generalized semiflows 251
2.1 Definition of generalized semiflow 251
2.2 Continuity properties 252
2.3 Compactness and dissipativity 252
2.4 Existence of the attractor 253
3 Main results 253
3.1 Notation 253
3.2 Assumptions on the data 254
3.3 Statement of the problem 254
3.4 Existence of weak solutions 256
3.5 Generalized semiflow and long-time behavior of the weak solutions 256
4 Generalized semiflow and Global Attractor of the *weak* solutions 257
4.1 Proof of Theorem 9 257
4.2 Proof of Theorem 11 263
4.3 Proof of Theorem 12 264

References 267

14 Stability for phase field systems involving indefinite surface tension coefficients 269

Ken Shirakawa

1 Introduction 269
2 Preliminaries 272
3 Key properties for the system (S) 276
4 Steady-state patterns 280
5 Stability for steady-state patterns 284
References 288

15 Geometric features of p-Laplace phase transitions 289

Enrico Valdinoci

1 Introduction 289
2 Results 290
References 298
