Topological Dynamics of Random Dynamical Systems

NGUYEN DINH CONG

Institute for Dynamical Systems
University of Bremen

CLARENDON PRESS • OXFORD
1997

CONTENTS

Introduction 1

1 Deterministic dynamical systems 5
1.1 Introduction 5
1.2 Equivalent dynamical systems 6
1.3 Structural stability and linearization 8
1.4 Classification 18
1.5 Other problems and discussion 20

2 Random dynamical systems: foundations 22
2.1 Introduction 22
2.2 The generation of random dynamical systems 25
2.2.1 Products of random mappings 25
2.2.2 Random differential equations 26
2.2.3 Stochastic differential equations 28
2.2.4 Local random dynamical systems 29
2.3 The multiplicative ergodic theorem of Oseledets 30
2.4 Lyapunov scalar products and Lyapunov norms 32
2.5 Some applications of random dynamical systems 41
2.5.1 Random Schrödinger operators 41
2.5.2 The noisy Duffing–van der Pol oscillator 42
2.5.3 Structural dynamics in engineering 42
2.5.4 Population dynamics in biology 44

3 The linearization of nonlinear random dynamical systems 46
3.1 Topological conjugacy of random dynamical systems 46
3.2 Exponential dichotomy 49
3.3 Random difference equations 50
3.4 The random Hartman–Grobman theorem 61
3.5 Bifurcation theory 80

4 Topological classification of discrete-time linear hyperbolic cocycles 84
4.1 Introduction 84
4.2 Topological classification of periodic cocycles 87
4.3 Necessary conditions for topological conjugacy 92
4.4 Structural stability of contracting linear cocycles 100
4.5 Diagonalization of linear cocycles 104

4.6 Classification of one-dimensional linear hyperbolic cocycles 110
4.7 Classification of linear hyperbolic diagonal cocycles 112
4.8 A classification theorem 117

5 Structural stability of discrete-time linear hyperbolic cocycles 121
5.1 Introduction 121
5.2 Exponential dichotomy of a linear cocycle with respect to a random norm 122
5.3 Structural stability of a linear cocycle having an exponential dichotomy 123
5.4 Structural stability of linear hyperbolic cocycles 128
5.5 Applications 130

6 Structural stability of continuous-time linear hyperbolic cocycles 132
6.1 Introduction 132
6.2 Uniformly contracting and expanding cocycles 133
6.3 Non-uniformly contracting and expanding linear cocycles 136
6.4 Structural stability 141
6.5 Application: the stability of deterministic hyperbolic systems under small random noise 147

7 Topological classification of continuous-time linear hyperbolic cocycles 150
7.1 Introduction 150
7.2 Necessary conditions for topological conjugacy 151
7.3 Some orientation properties of linear hyperbolic cocycles 154
7.4 Topological classification 170

8 Topological invariants of linear cocycles 176
8.1 Introduction 176
8.2 Stable and unstable subspaces are topological invariants 177
8.3 When is the center subspace invariant? 186

Bibliography 190
