

## Contents

<i>Preface</i>	<i>page ix</i>
<i>Prologue: In praise of cells</i>	xi

<b>Chapter 1</b>   The first look at a genome: <i>Sequence statistics</i>	1
1.1 Genomic era, year zero	1
1.2 The anatomy of a genome	3
1.3 Probabilistic models of genome sequences	5
1.4 Annotating a genome: statistical sequence analysis	10
1.5 Finding data: GenBank, EMBL, and DDBJ	18
1.6 Exercises	20
1.7 Reading List	21
<b>Chapter 2</b>   All the sequence's men: <i>Gene finding</i>	22
2.1 The human genome sweepstakes	22
2.2 An introduction to genes and proteins	23
2.3 Genome annotation: gene finding	29
2.4 Detecting spurious signals: hypothesis testing	31
2.5 Exercises	37
2.6 Reading List	37
<b>Chapter 3</b>   All in the family: <i>Sequence alignment</i>	38
3.1 Eye of the tiger	38
3.2 On sequence alignment	39
3.3 On sequence similarity	40
3.4 Sequence alignment: global and local	42
3.5 Statistical analysis of alignments	47
3.6 BLAST: fast approximate local alignment	50
3.7 Multiple sequence alignment	53
3.8* Computing the alignments	55
3.9 Exercises	60
3.10 Reading list	60
<b>Chapter 4</b>   The boulevard of broken genes: <i>Hidden Markov models</i>	61
4.1 The nose knows	61
4.2 Hidden Markov models	63
4.3 Profile HMMs	67
4.4 Finding genes with hidden Markov models	69
4.5 Case study: odorant receptors	70
4.6* Algorithms for HMM computations	75
4.7 Exercises	77
4.8 Reading list	77

<b>Chapter 5</b>	<b>Are Neanderthals among us?: Variation within and between species</b>	78
5.1	Variation in DNA sequences	79
5.2	Mitochondrial DNA: a model for the analysis of variation	83
5.3	Variation between species	85
5.4	Estimating genetic distance	87
5.5	Case study: are Neanderthals still among us?	92
5.6	Exercises	94
5.7	Reading list	95
<b>Chapter 6</b>	<b>Fighting HIV: Natural selection at the molecular level</b>	96
6.1	A mysterious disease	96
6.2	Evolution and natural selection	97
6.3	HIV and the human immune system	98
6.4	Quantifying natural selection on DNA sequences	99
6.5	Estimating $K_A/K_S$	102
6.6	Case study: natural selection and the HIV genome	105
6.7	Exercises	108
6.8	Reading list	109
<b>Chapter 7</b>	<b>SARS – a post-genomic epidemic: Phylogenetic analysis</b>	110
7.1	Outbreak	110
7.2	On trees and evolution	112
7.3	Inferring trees	115
7.4	Case study: phylogenetic analysis of the SARS epidemic	120
7.5	The Newick format	126
7.6	Exercises	127
7.7	Reading list	127
<b>Chapter 8</b>	<b>Welcome to the hotel <i>Chlamydia</i>: Whole genome comparisons</b>	128
8.1	Uninvited guests	128
8.2	By leaps and bounds: patterns of genome evolution	129
8.3	Beanbag genomics	130
8.4	Synteny	135
8.5	Exercises	138
8.6	Reading list	139
<b>Chapter 9</b>	<b>The genomics of wine-making: Analysis of gene expression</b>	141
9.1	Chateau Hajji Feruz Tepe	141
9.2	Monitoring cellular communication	143
9.3	Microarray technologies	145
9.4	Case study: the diauxic shift and yeast gene expression	147
9.5	Bonus case study: cell-cycle regulated genes	155

<a href="#">9.6 Exercises</a>	158
<a href="#">9.7 Reading list</a>	158

---

<b>Chapter 10</b>	<a href="#">A bed-time story: Identification of regulatory sequences</a>	159
-------------------	--	-----

<a href="#">10.1 The circadian clock</a>	159
<a href="#">10.2 Basic mechanisms of gene expression</a>	161
<a href="#">10.3 Motif-finding strategies</a>	162
<a href="#">10.4 Case study: the clock again</a>	167
<a href="#">10.5 Exercises</a>	172
<a href="#">10.6 Reading list</a>	172

<i>Bibliography</i>	173
---------------------	-----

<i>Index</i>	179
