Contents

Chapter 1. On the ill-posedness of coefficient inverse problems and the general approach to the study of them **1**

Chapter 2. Determining the coefficient for the lowest term of equation **7**

2.1. Setting of the problem. Determination of the coefficient 7

2.2. The difference quasi-inversion problem 10

2.3. A test example 14

Chapter 3. Determining of the coefficient for the leading terms of equation **21**

3.1. Statement of the problem 21

3.2. The quasi-inversion problem and an estimate of stability of its solution 23

3.3. Simplification of equation of the quasi-inversion method 25

3.4. Simplification of the quasi-inversion problem 36

3.5. Finding the coefficient 41

3.6. Difference quasi-inversion problem 51

3.7. Numerical solution of the quasi-inversion problem 57

3.8. Results of solution of a test example problem 64

Chapter 4. Modification of the method of determining the coefficient of the leading terms in an equation **67**

4.1. Modification method 67

4.2. Defining a coefficient 73

4.3. On deriving the main integro-differential equation 78

Chapter 5. Generalization of the developed algorithm for solving coefficient inversion problem **83**

Chapter 6. On applications of coefficient inverse problems in underground fluid dynamics **87**

6.1. Determining of filtration parameters of exploited non-homogeneous oil strata 87

6.2. Determining the filtration parameters in the case of non-linear filtration 91

6.3. The quasi-inversion problem for the considered cases 101

Summary **103**

Bibliography **105**
