

An Introduction to
**Chaotic Dynamical
Systems** Second Edition

Robert L. Devaney

Department of Mathematics
Boston University

Addison-Wesley Publishing Company, Inc.
The Advanced Book Program

Redwood City, California • Menlo Park, California
Reading, Massachusetts • New York • Amsterdam
Don Mills, Ontario • Sydney • Bonn • Madrid
Singapore • Tokyo • San Juan • Wokingham, United Kingdom

Publisher: Allan M. Wylde
Production Administrator: Karen L. Garrison
Editorial Coordinator: Aida Adams
Promotions Manager: Laura Likely

Cover:
The cover image shows a computer graphics display of the Julia set of the complex exponential function (Chapter 3, Section 9).

Library of Congress Cataloging-in-Publication Data

Devaney, Robert L., 1948-
An introduction to chaotic dynamical systems / Robert L. Devaney.
--2nd ed.
p. cm.
"Advanced book program."
Bibliography: p.
Includes index.
ISBN 0-201-13046-7
1. Differentiable dynamical systems. 2. Chaotic behavior in systems. I. Title.
QA614.8.D48 1989
515'.352--dc20

Table of Contents

| | |
|---|----------|
| Part One: One-Dimensional Dynamics | 1 |
| 1.1 Examples of dynamical systems | 2 |
| 1.2 Preliminaries from calculus | 8 |
| 1.3 Elementary definitions | 17 |
| 1.4 Hyperbolicity | 24 |
| 1.5 An example: the quadratic family | 31 |
| 1.6 Symbolic dynamics | 39 |
| 1.7 Topological conjugacy | 44 |
| 1.8 Chaos | 48 |
| 1.9 Structural stability | 53 |
| 1.10 Sarkovskii's theorem | 60 |
| 1.11 The Schwarzian derivative | 69 |
| 1.12 Bifurcation theory | 80 |
| 1.13 Another view of period three | 93 |
| 1.14 Maps of the circle | 102 |
| 1.15 Morse-Smale diffeomorphisms | 114 |
| 1.16 Homoclinic points and bifurcations | 122 |
| 1.17 The period-doubling route to chaos | 130 |
| 1.18 The kneading theory | 139 |
| 1.19 Genealogy of periodic points | 147 |

| | |
|---|-----|
| Part Two: Higher Dimensional Dynamics | 159 |
| 2.1 Preliminaries from linear algebra and advanced calculus | 161 |
| 2.2 The dynamics of linear maps: two and three dimensions | 173 |
| 2.3 The horseshoe map | 181 |
| 2.4 Hyperbolic toral automorphisms | 190 |
| 2.5 Attractors | 201 |
| 2.6 The stable and unstable manifold theorem | 214 |
| 2.7 Global results and hyperbolic sets | 232 |
| 2.8 The Hopf bifurcation | 240 |
| 2.9 The Hénon map | 251 |
| Part Three: Complex Analytic Dynamics | 260 |
| 3.1 Preliminaries from complex analysis | 261 |
| 3.2 Quadratic maps revisited | 268 |
| 3.3 Normal families and exceptional points | 272 |
| 3.4 Periodic points | 276 |
| 3.5 The Julia set | 283 |
| 3.6 The geometry of Julia sets | 289 |
| 3.7 Neutral periodic points | 300 |
| 3.8 The Mandelbrot set | 311 |
| 3.9 An example: the exponential function | 319 |
| Color Plates | 329 |
| Index | 333 |
