Contents

Preface	xv
Acknowledgments	xxiii
Preliminaries	1
1 Countable sets	1
2 The Cantor set	2
3 Cardinality	4
3.1 Some examples	5
4 Cardinality of some infinite Cartesian products	6
5 Orderings, the maximal principle, and the axiom of choice	8
6 Well-ordering	9
6.1 The first uncountable	11
Problems and Complements	11
I Topologies and Metric Spaces	17
1 Topological spaces	17
1.1 Hausdorff and normal spaces	19
2 Urysohn's lemma	19
3 The Tietze extension theorem	21
4 Bases, axioms of countability, and product topologies	22
4.1 Product topologies	24
5 Compact topological spaces	25
5.1 Sequentially compact topological spaces	26

6	Compact subsets of \mathbb{R}^N	27
7	Continuous functions on countably compact spaces	29
8	Products of compact spaces	30
9	Vector spaces	31
	9.1 Convex sets	33
	9.2 Linear maps and isomorphisms	33
10	Topological vector spaces	34
	10.1 Boundedness and continuity	35
11	Linear functionals	36
12	Finite-dimensional topological vector spaces	36
	12.1 Locally compact spaces	37
13	Metric spaces	38
	13.1 Separation and axioms of countability	39
	13.2 Equivalent metrics	40
	13.3 Pseudometrics	40
14	Metric vector spaces	41
	14.1 Maps between metric spaces	42
15	Spaces of continuous functions	43
	15.1 Spaces of continuously differentiable functions	44
16	On the structure of a complete metric space	44
17	Compact and totally bounded metric spaces	46
	17.1 Precompact subsets of X	48
	Problems and Complements	49
II	Measuring Sets	65
1	Partitioning open subsets of \mathbb{R}^N	65
2	Limits of sets, characteristic functions, and σ -algebras	67
3	Measures	68
	3.1 Finite, σ -finite, and complete measures	71
	3.2 Some examples	71
4	Outer measures and sequential coverings	72
	4.1 The Lebesgue outer measure in \mathbb{R}^N	73
	4.2 The Lebesgue–Stieltjes outer measure	73
5	The Hausdorff outer measure in \mathbb{R}^N	74
6	Constructing measures from outer measures	76
7	The Lebesgue–Stieltjes measure on \mathbb{R}	79
	7.1 Borel measures	80
8	The Hausdorff measure on \mathbb{R}^N	80
9	Extending measures from semialgebras to σ -algebras	82
	9.1 On the Lebesgue–Stieltjes and Hausdorff measures	84
10	Necessary and sufficient conditions for measurability	84
11	More on extensions from semialgebras to σ -algebras	86
12	The Lebesgue measure of sets in \mathbb{R}^N	88
	12.1 A necessary and sufficient condition of measurability	88
13	A nonmeasurable set	90

14 Borel sets, measurable sets, and incomplete measures 91
 14.1 A continuous increasing function $f : [0, 1] \rightarrow [0, 1]$ 91
 14.2 On the preimage of a measurable set 93
 14.3 Proof of Propositions 14.1 and 14.2 94
 15 More on Borel measures 94
 15.1 Some extensions to general Borel measures 97
 15.2 Regular Borel measures and Radon measures 97
 16 Regular outer measures and Radon measures 98
 16.1 More on Radon measures 99
 17 Vitali coverings 99
 18 The Besicovitch covering theorem 103
 19 Proof of Proposition 18.2 105
 20 The Besicovitch measure-theoretical covering theorem 107
 Problems and Complements 110

III The Lebesgue Integral 123

1 Measurable functions 123
 2 The Egorov theorem 126
 2.1 The Egorov theorem in \mathbb{R}^N 128
 2.2 More on Egorov’s theorem 128
 3 Approximating measurable functions by simple functions 128
 4 Convergence in measure 130
 5 Quasi-continuous functions and Lusin’s theorem 133
 6 Integral of simple functions 135
 7 The Lebesgue integral of nonnegative functions 136
 8 Fatou’s lemma and the monotone convergence theorem 137
 9 Basic properties of the Lebesgue integral 139
 10 Convergence theorems 141
 11 Absolute continuity of the integral 142
 12 Product of measures 142
 13 On the structure of $(\mathcal{A} \times \mathcal{B})$ 144
 14 The Fubini–Tonelli theorem 147
 14.1 The Tonelli version of the Fubini theorem 148
 15 Some applications of the Fubini–Tonelli theorem 148
 15.1 Integrals in terms of distribution functions 148
 15.2 Convolution integrals 149
 15.3 The Marcinkiewicz integral 150
 16 Signed measures and the Hahn decomposition 151
 17 The Radon–Nikodým theorem 154
 18 Decomposing measures 157
 18.1 The Jordan decomposition 157
 18.2 The Lebesgue decomposition 159
 18.3 A general version of the Radon–Nikodým theorem 160
 Problems and Complements 160

IV	Topics on Measurable Functions of Real Variables	171
1	Functions of bounded variations	171
2	Dini derivatives	173
3	Differentiating functions of bounded variation	176
4	Differentiating series of monotone functions	177
5	Absolutely continuous functions	179
6	Density of a measurable set	181
7	Derivatives of integrals	182
8	Differentiating Radon measures	184
9	Existence and measurability of $D_\mu v$	186
9.1	Proof of Proposition 9.2	188
10	Representing $D_\mu v$	189
10.1	Representing $D_\mu v$ for $v \ll \mu$	189
10.2	Representing $D_\mu v$ for $v \perp \mu$	191
11	The Lebesgue differentiation theorem	191
11.1	Points of density	192
11.2	Lebesgue points of an integrable function	192
12	Regular families	193
13	Convex functions	194
14	Jensen's inequality	196
15	Extending continuous functions	197
16	The Weierstrass approximation theorem	199
17	The Stone–Weierstrass theorem	200
18	Proof of the Stone–Weierstrass theorem	201
18.1	Proof of Stone's theorem	202
19	The Ascoli–Arzelà theorem	203
19.1	Precompact subsets of $C(\overline{E})$	204
	Problems and Complements	205
V	The $L^p(E)$ Spaces	221
1	Functions in $L^p(E)$ and their norms	221
1.1	The spaces L^p for $0 < p < 1$	222
1.2	The spaces L^q for $q < 0$	222
2	The Hölder and Minkowski inequalities	223
3	The reverse Hölder and Minkowski inequalities	224
4	More on the spaces L^p and their norms	225
4.1	Characterizing the norm $\ f\ _p$ for $1 \leq p < \infty$	225
4.2	The norm $\ \cdot\ _\infty$ for E of finite measure	226
4.3	The continuous version of the Minkowski inequality	227
5	$L^p(E)$ for $1 \leq p \leq \infty$ as normed spaces of equivalence classes	227
5.1	$L^p(E)$ for $1 \leq p \leq \infty$ as a metric topological vector space	228
6	A metric topology for $L^p(E)$ when $0 < p < 1$	229
6.1	Open convex subsets of $L^p(E)$ when $0 < p < 1$	229
7	Convergence in $L^p(E)$ and completeness	230
8	Separating $L^p(E)$ by simple functions	232

9 Weak convergence in $L^p(E)$ 234
 9.1 A counterexample 234
 10 Weak lower semicontinuity of the norm in $L^p(E)$ 235
 11 Weak convergence and norm convergence 236
 11.1 Proof of Proposition 11.1 for $p \geq 2$ 237
 11.2 Proof of Proposition 11.1 for $1 < p < 2$ 237
 12 Linear functionals in $L^p(E)$ 238
 13 The Riesz representation theorem 239
 13.1 Proof of Theorem 13.1: The case where $\{X, \mathcal{A}, \mu\}$ is finite 240
 13.2 Proof of Theorem 13.1: The case where $\{X, \mathcal{A}, \mu\}$ is σ -finite 241
 13.3 Proof of Theorem 13.1: The case where $1 < p < \infty$ 242
 14 The Hanner and Clarkson inequalities 243
 14.1 Proof of Hanner's inequalities 244
 14.2 Proof of Clarkson's inequalities 245
 15 Uniform convexity of $L^p(E)$ for $1 < p < \infty$ 246
 16 The Riesz representation theorem by uniform convexity 247
 16.1 Proof of Theorem 13.1: The case where $1 < p < \infty$ 247
 16.2 The case where $p = 1$ and E is of finite measure 248
 16.3 The case where $p = 1$ and $\{X, \mathcal{A}, \mu\}$ is σ -finite 249
 17 Bounded linear functional in $L^p(E)$ for $0 < p < 1$ 250
 17.1 An alternate proof of Proposition 17.1 250
 18 If $E \subset \mathbb{R}^N$ and $p \in [1, \infty)$, then $L^p(E)$ is separable 251
 18.1 $L^\infty(E)$ is not separable 254
 19 Selecting weakly convergent subsequences 254
 20 Continuity of the translation in $L^p(E)$ for $1 \leq p < \infty$ 255
 21 Approximating functions in $L^p(E)$ with functions in $C^\infty(E)$ 257
 22 Characterizing precompact sets in $L^p(E)$ 260
 Problems and Complements 262

VI Banach Spaces 275

1 Normed spaces 275
 1.1 Seminorms and quotients 276
 2 Finite- and infinite-dimensional normed spaces 277
 2.1 A counterexample 277
 2.2 The Riesz lemma 278
 2.3 Finite-dimensional spaces 279
 3 Linear maps and functionals 280
 4 Examples of maps and functionals 282
 4.1 Functionals 283
 4.2 Linear functionals on $C(\overline{E})$ 283
 5 Kernels of maps and functionals 284
 6 Equibounded families of linear maps 285
 6.1 Another proof of Proposition 6.1 286
 7 Contraction mappings 286
 7.1 Applications to some Fredholm integral equations 287

8	The open mapping theorem	288
8.1	Some applications	289
8.2	The closed graph theorem	289
9	The Hahn–Banach theorem	290
10	Some consequences of the Hahn–Banach theorem	292
10.1	Tangent planes	295
11	Separating convex subsets of X	295
12	Weak topologies	297
12.1	Weakly and strongly closed convex sets	299
13	Reflexive Banach spaces	300
14	Weak compactness	301
14.1	Weak sequential compactness	302
15	The weak* topology	303
16	The Alaoglu theorem	304
17	Hilbert spaces	306
17.1	The Schwarz inequality	307
17.2	The parallelogram identity	307
18	Orthogonal sets, representations, and functionals	308
18.1	Bounded linear functionals on H	310
19	Orthonormal systems	310
19.1	The Bessel inequality	311
19.2	Separable Hilbert spaces	312
20	Complete orthonormal systems	312
20.1	Equivalent notions of complete systems	313
20.2	Maximal and complete orthonormal systems	313
20.3	The Gram–Schmidt orthonormalization process	314
20.4	On the dimension of a separable Hilbert space	314
	Problems and Complements	314

VII Spaces of Continuous Functions, Distributions, and Weak

	Derivatives	325
1	Spaces of continuous functions	325
1.1	Partition of unity	326
2	Bounded linear functionals on $C_o(\mathbb{R}^N)$	327
2.1	Remarks on functionals of the type (2.2) and (2.3)	327
2.2	Characterizing $C_o(\mathbb{R}^N)^*$	328
3	Positive linear functionals on $C_o(\mathbb{R}^N)$	328
4	Proof of Theorem 3.3: Constructing the measure μ	331
5	Proof of Theorem 3.3: Representing T as in (3.3)	333
6	Characterizing bounded linear functionals on $C_o(\mathbb{R}^N)$	335
6.1	Locally bounded linear functionals on $C_o(\mathbb{R}^N)$	335
6.2	Bounded linear functionals on $C_o(\mathbb{R}^N)$	336
7	A topology for $C_o^\infty(E)$ for an open set $E \subset \mathbb{R}^N$	337
8	A metric topology for $C_o^\infty(E)$	339
8.1	Equivalence of these topologies	340

8.2	$D(E)$ is not complete	341
9	A topology for $C_0^\infty(K)$ for a compact set $K \subset E$	341
9.1	A metric topology for $C_0^\infty(K)$	342
9.2	$\mathcal{D}(K)$ is complete	342
10	Relating the topology of $D(E)$ to the topology of $\mathcal{D}(K)$	343
10.1	Noncompleteness of $D(E)$	344
11	The Schwartz topology of $\mathcal{D}(E)$	344
12	$\mathcal{D}(E)$ is complete	346
12.1	Cauchy sequences in $\mathcal{D}(E)$	347
12.2	The topology of $\mathcal{D}(E)$ is not metrizable	347
13	Continuous maps and functionals	348
13.1	Distributions on E	348
13.2	Continuous linear maps $T : \mathcal{D}(E) \rightarrow \mathcal{D}(E)$	349
14	Distributional derivatives	349
14.1	Derivatives of distributions	350
14.2	Some examples	350
14.3	Miscellaneous remarks	351
15	Fundamental Solutions	352
15.1	The fundamental solution of the wave operator	352
15.2	The fundamental solution of the Laplace operator	354
16	Weak derivatives and main properties	355
17	Domains and their boundaries	358
17.1	∂E of class C^1	358
17.2	Positive geometric density	358
17.3	The segment property	358
17.4	The cone property	359
17.5	On the various properties of ∂E	359
18	More on smooth approximations	359
19	Extensions into \mathbb{R}^N	361
20	The chain rule	363
21	Steklov averagings	365
22	Characterizing $W^{1,p}(E)$ for $1 < p < \infty$	367
22.1	Remarks on $W^{1,\infty}(E)$	368
23	The Rademacher theorem	368
	Problems and Complements	371

VIII Topics on Integrable Functions of Real Variables 375

1	Vitali-type coverings	375
2	The maximal function	377
3	Strong L^p estimates for the maximal function	379
3.1	Estimates of weak and strong type	380
4	The Calderón–Zygmund decomposition theorem	381
5	Functions of bounded mean oscillation	383
6	Proof of Theorem 5.1	384
7	The sharp maximal function	387

8	Proof of the Fefferman–Stein theorem	388
9	The Marcinkiewicz interpolation theorem	390
9.1	Quasi-linear maps and interpolation	391
10	Proof of the Marcinkiewicz theorem	392
11	Rearranging the values of a function	394
12	Basic properties of rearrangements	396
13	Symmetric rearrangements	398
14	A convolution inequality for rearrangements	400
14.1	Approximations by simple functions	400
15	Reduction to a finite union of intervals	402
16	Proof of Theorem 14.1: The case where $T + S \leq R$	404
17	Proof of Theorem 14.1: The case where $S + T > R$	404
17.1	Proof of Lemma 17.1	407
18	Hardy’s inequality	407
19	A convolution-type inequality	409
19.1	Some reductions	409
20	Proof of Theorem 19.1	410
21	An equivalent form of Theorem 19.1	411
22	An N -dimensional version of Theorem 21.1	412
23	L^p estimates of Riesz potentials	413
24	The limiting case $p = N$	415
	Problems and Complements	417
IX	Embeddings of $W^{1,p}(E)$ into $L^q(E)$	423
1	Multiplicative embeddings of $W_o^{1,p}(E)$	423
2	Proof of Theorem 1.1 for $N = 1$	425
3	Proof of Theorem 1.1 for $1 \leq p < N$	425
4	Proof of Theorem 1.1 for $1 \leq p < N$, concluded	428
5	Proof of Theorem 1.1 for $p \geq N > 1$	428
5.1	Estimate of $I_1(x, R)$	429
5.2	Estimate of $I_2(x, R)$	430
6	Proof of Theorem 1.1 for $p \geq N > 1$, concluded	430
7	On the limiting case $p = N$	431
8	Embeddings of $W^{1,p}(E)$	432
9	Proof of Theorem 8.1	433
10	Poincaré inequalities	435
10.1	The Poincaré inequality	435
10.2	Multiplicative Poincaré inequalities	437
11	The discrete isoperimetric inequality	438
12	Morrey spaces	439
12.1	Embeddings for functions in the Morrey spaces	440
13	Limiting embedding of $W^{1,N}(E)$	441
14	Compact embeddings	443
15	Fractional Sobolev spaces in \mathbb{R}^N	445
16	Traces	447

17	Traces and fractional Sobolev spaces	448
18	Traces on ∂E of functions in $W^{1,p}(E)$	450
	18.1 Traces and fractional Sobolev spaces	453
19	Multiplicative embeddings of $W^{1,p}(E)$	453
20	Proof of Theorem 19.1: A special case	456
21	Constructing a map between E and Q : Part 1	458
22	Constructing a map between E and Q : Part 2	460
23	Proof of Theorem 19.1, concluded	463
	Problems and Complements	464
	References	469
	Index	473
