

Differentiation of Real Functions

Andrew Bruckner

9780821869901

Chapters

Introduction

Preliminaries

Chapter 1. Darboux functions

Chapter 2. Darboux functions in the first class of Baire

Chapter 3. Continuity and approximate continuity of derivatives

Chapter 4. The extreme derivatives of a function

Chapter 5. Reconstruction of the primitive

Chapter 6. The Zahorski classes

Chapter 7. The problem of characterizing derivatives

Chapter 8. Derivatives a.e. and generalizations

Chapter 9. Transformations via homeomorphisms

Chapter 10. Generalized derivatives

Chapter 11. Monotonicity

Chapter 12. Stationary and determining sets

Chapter 13. Behavior of typical continuous functions

Chapter 14. Miscellaneous topics

Chapter 15. Recent developments
