Table of Contents

Preface	xi
Notes for the reader	xiii

Chapter A Prerequisites—general group theory

1. Groups and subgroups—the rudiments	1
2. Groups and homomorphisms	5
3. Series	7
4. Direct and semidirect products	9
5. G -sets and permutation representations	17
6. Sylow subgroups	21
7. Commutators	22
8. Finite nilpotent groups	25
9. The Frattini subgroup	30
10. Soluble groups	34
11. Theorems of Gaschütz, Schur-Zassenhaus, and Maschke	38
12. Coprime operator groups	41
13. Automorphism groups induced on chief factors	44
14. Subnormal subgroups	47
15. Primitive finite groups	52
16. Maximal subgroups of soluble groups	57
17. The transfer	60
18. The wreath product	62
19. Subdirect and central products	73
20. Extraspecial p -groups and their automorphism groups	77
21. Automorphisms of abelian groups	83

Chapter B Prerequisites—representation theory

1. Tensor products	90
2. Projective and injective modules	95
3. Modules and representations of K -algebras	101
4. The structure of a group algebra	111
5. Changing the field of a representation	120
6. Induced modules	129

7. Clifford's theorems	139
8. Homogeneous modules	153
9. Representations of abelian and extraspecial groups	157
10. Faithful and simple modules	172
11. Modules with special properties	182
12. Group constructions using modules	190

Chapter I

Introduction to soluble groups

1. Preparations for the $p^a q^b$ -theorem of Burnside	204
2. The proof of Burnside's $p^a q^b$ -theorem	210
3. Hall subgroups	216
4. Hall systems of a finite soluble group	220
5. System normalizers	235
6. Pronormal subgroups	241
7. Normally embedded subgroups	250

Chapter II

Classes of groups and closure operations

1. Classes of groups and closure operations	262
2. Some special classes defined by closure properties	271

Chapter III

Projectors and Schunck classes

1. A historical introduction	279
2. Schunck classes and boundaries	282
3. Projectors and covering subgroups	288
4. Examples	302
5. Locally-defined Schunck classes and other constructions	321
6. Projectors in subgroups	328

Chapter IV

The theory of formations

1. Examples and basic results	333
2. Connections between Schunck classes and formations	344
3. Local formations	356
4. The theorem of Lubeseder and the theorem of Baer	366
5. Projectors and local formations	375
6. Theorems about f -hypercentral action	386

Chapter V

Normalizers

1. Normalizers in general	394
2. Normalizers associated with a formation function	396

3. \mathfrak{F} -normalizers	400
4. Connections between normalizers and projectors	408
5. Precursive subgroups	414

Chapter VI

Further theory of Schunck classes

1. Strong containment and the lattice of Schunck classes	426
2. Complementation in the lattice	440
3. D -classes	453
4. Schunck classes with normally embedded projectors	461
5. Schunck classes with permutable and CAP projectors	471

Chapter VII

Further theory of formations

1. The formation generated by a single group	479
2. Supersoluble groups and chief factor rank	483
3. Primitive saturated formations	497
4. The saturation of a formation	502
5. Strong containment for saturated formations	509
6. Extreme classes	516
7. Saturated formations with the cover-avoidance property	528

Chapter VIII

Injectors and Fitting sets

1. Historical introduction	535
2. Injectors and Fitting sets	537
3. Normally embedded subgroups are injectors	548
4. Fischer sets and Fischer subgroups	554

Chapter IX

Fitting classes—examples and properties related to injectors

1. Fundamental facts	563
2. Constructions and examples	574
3. Fischer classes, normally embedded, and permutable Fitting classes	600
4. Dominance and some characterizations of injectors	617
5. Dark's construction—the theme	630
6. Dark's construction—variations	647

Chapter X

Fitting classes—the Lockett section

1. The definition and basic properties of the Lockett section	677
2. Fitting classes and wreath products	697
3. Normal Fitting classes	704

4. The Lausch group	720
5. Examples of Fitting pairs and Berger's theorem	737
6. The Lockett conjecture	761

Chapter XI

Fitting classes—their behaviour as classes of groups

1. Fitting formations	775
2. Metanilpotent Fitting classes with additional closure properties	783
3. Further theory of metanilpotent Fitting classes	799
4. Fitting class boundaries I	806
5. Fitting class boundaries II	816
6. Frattini duals and Fitting classes	824
Appendix α . A theorem of Oates and Powell	833
Appendix β . Frattini extensions	846
Bibliography	855
List of Symbols	871
Index of Subjects	873
Index of Names	889
