Preface

This volume contains the Proceedings of an International School of Mathematics devoted to Optimization and Related Fields. Held from 17 to 30 September 1984, the site for the meeting was the "Ettore Majorana" Centre for Scientific Culture in Erice, Sicily. The course was conceived and directed by R. Conti, E. De Giorgi and F. Giannessi as an opportunity for promoting the exchange and for stimulating the interaction among the various branches of optimization, like calculus of variations, theory of optimal controls, mathematical programming, convex analysis, and so on. Such branches have now a fast development around the world, so that a titer interaction seems to be interesting and useful.

The school was attended by 67 people from 12 countries. In the tradition of the Ettore Majorana Centre for Scientific Culture, the participants were classified either as "invited speakers" or as "students", though in fact the latter were not students in the ordinary sense; most of them were Ph.D. holders with established publication records. Several of them contributed to the course with the following seminars:

- On point-to-set mappings in discrete programming and some applications by B. Bank;
- Stability and existence in nonlinear mixed-integer programming by B. Bank;
- Some relaxation results for integral functionals by G. Buttazzo;
- On a stability problem in Γ -convergence by R. De Arcangelis;
- Relaxation in the optimal control of abstract evolution inclusions by C. Engblom;
- Necessary conditions for constrained optimization problems: some remarks on Dubovitskii-Miljutin theory by P. Favati and S. Steffé;
- Existence and approximation of optimal solutions of infinite horizon

programs by S.D.Flam;

- Existence results and stability in Pareto problems by R.Lucchetti;
- Closure and upper semi-continuity results in mathematical programming, Nash economic equilibria by R.Lucchetti and F.Patrone;
- Stable monotone variational inequalities by L.McLinden;
- Regularity conditions for constrained extremum problems by L.Martein;
- Generalized Bellman equation for the optimal time problem in Hilbert Space by F.Mignanego;
- Efficiency and optimality of allocations in large squares economies by N.S.Papageorgiou;
- Lagrangian duality in nonlinear programming by M.Pappalardo;
- On the image of a constrained extremum problem by F.Tardella;
- Duality gap: an upper bound and a characterization of the problems with zero gap by F.Tardella;
- Non-coercive variational problems and applications to elasticity by F.Tomarelli;
- Jacobi sufficiency criterion for optimal control by V.Zeidan.

We express our sincere thanks to all those who took part in the school. Special mention should be made of the Ettore Majorana Centre in Erice which offered its facilities and stimulating environment for the meeting. We are all indebted to the Italian National Research Council (C.N.R.), and Ministry of Public Education for their financial support. Finally we want to express our special thanks to Springer-Verlag for their unfailing cooperation.

R. Conti (Florence)

E. De Giorgi (Pisa)

F. Giannessi (Pisa)

Contents

1 Generalized Reduced Gradient and Global Newton Methods (J. Abadie)	1
1. Introduction.....	1
2. Notations and algebraic preliminaries.....	1
3. The global Newton method.....	4
4. The generalized reduced gradient approach to global Newton	7
5. Constrained optimization.....	13
6. Numerical experiments	14
7. Conclusions	20
2 Epi-Convergence and Duality. Convergence of Sequences of Marginal and Lagrangians Functions. Applications to Homogenization Problems in Mechanics (H. Attouch)	21
1. Epi-convergence and duality. Historical introduction..	21
2. Epi-convergence. Definition and variational propert- ies	26
3. Continuity of the Legendre-Fenchel transformation with respect to epi-convergence	31
4. Convergence of dual variables. An example of the epi- convergence approach on an homogenization problem	39
5. Convergence of primal and dual variables. A general approach via epi-convergence of marginal functions....	47
6. A unifying point of view: epi/hypo convergence of La- grangians	50
3 Non-Linear Separation Theorems, Duality and Optimality Conditions (A. Cambini)	57
1. Introduction	57
2. Theorems of the alternative and separation functions..	57
3. Weak alternative and optimality conditions	64
4. Strong alternative and optimality conditions	72
5. Lagrangean penalty approaches	76
6. Duality	80
7. Regularity	83
8. The image of a constrained problem	86
9. Concluding remarks	90
4 Convergence of Equilibria in the Theory of Games (E. Cavazzuti)	95
1. Introduction	95
2. Regularization operators, stable pairs, closed func- tions	96
3. Definitions and properties of r-limits	104
4. Variational properties of r-limits	106
5. Solution concepts	112
6. Convergences for saddle point problems and their prop- erties	115
7. An example	123

8.	Convergence of Nash equilibria	125
5	On Pareto's Problems (J. P. Cecconi)	131
1.	Introduction	131
2.	Existence of Pareto points	141
3.	Properties of Pareto points: support points, efficiency	148
4.	Existence of Pareto minima for vector functions	159
6	Tonelli's Regularity Theory in the Calculus of Variations: Recent Progress (F. H. Clarke)	163
1.	Introduction: the naive theory	163
2.	Tonelli's existence theory	166
3.	The Ball-Mizel problem	169
4.	Tonelli's necessary condition and regularity theory...	170
5.	Classes of well-behaved problems	171
6.	Conditions on the Bernstein function	172
7.	Polynomial Lagrangians	173
8.	Local existence	174
9.	Local existence and the dual action	175
7	Convergence of Unilateral Convex Sets (G. Dal Maso)	181
8	Continuity of Bilinear and Non-Bilinear Polarities (S. Dolecki)	191
1.	Introduction	191
2.	Polarities	193
3.	Convergences	195
4.	Continuity of polarities with respect to $(-, +)$ and \mathbb{R} ..	202
5.	Continuity of polarities with respect to $(+, -)$ and $(-, -)$	204
6.	Semicontinuity of value functions	208
7.	Continuity of conjugation	211
9	Some Complements of Complex Analysis (I. Ekeland)	215
1.	Introduction	215
2.	Theorem of Brønstead-Rockafellar	218
3.	Theorem of Toland	221
10	Abstract Γ-Convergence (T. Franzoni)	229
11	Constructive Aspects in Time Optimal Control (R. Hoppe)	243
1.	Introduction	243
2.	Discrete convergence in discrete approximations	246
3.	Convergence of input maps and reachable sets	251
4.	Convergence of minimum times and optimal controls....	260
5.	Applications	264
12	Distributed Systems with Uncomplete Data and Lagrange Multipliers (J. L. Lions)	273
1.	Introduction	273
2.	Elliptic system, "well set" situation	281
3.	Elliptic system, "non well set" situation	285
4.	Parabolic system	296
5.	Hyperbolic system	301
13	Some Applications of Penalty Functions in Mathematical Programming (O. L. Mangasarian)	307
1.	Introduction	308
2.	Some fundamental properties of exterior penalty functions	310
3.	Bounds and existence for dual convex programs	316

4.	Penalty functions in linear programming	325
5.	Appendix	328
14	Dual Properties of Sequential Gradient-Restoration Algorithms for Optimal Control Problems (<i>A. Miele and T. Wang</i>)	331
1.	Introduction	331
2.	General problem	333
3.	Gradient phase, primal formulation	337
4.	Gradient phase, dual formulation	340
5.	Gradient phase, computational implications	342
6.	Restoration phase, primal formulation	346
7.	Restoration phase, dual formulation	349
8.	Restoration phase, computational implications	351
9.	Comments	355
10.	Conclusions	355
15	Stochastic Homogenization and Ergodic Theory (<i>L. Modica</i>)	359
16	On the Hypo-Convergence of Probability Measures (<i>R. J. B Wets and G. Salinetti</i>)	371
1.	Introduction	371
2.	Convergence of sets and semicontinuous functions	373
3.	Semicontinuous measures on \mathcal{F}	377
4.	Hypo-convergence of probability sc-measures on \mathcal{F} and Prohorov's theorem	390
17	Stability Analysis in Optimization (<i>T. Zolezzi</i>)	397
1.	Introduction	397
2.	Convergence results for approximate and exact solutions	397
3.	Applications to mathematical programming	408
4.	Performance stability and relaxation stability in optimal control	414
