Library of Congress Cataloging-in-Publication Data

Dullerud, Geir E., 1966-

A course in robust control theory: a convex approach/Geir E. Dullerud,
Fernando G. Paganini.

p. cm. — (Texts in applied mathematics)

Includes bibliographical references and index.

ISBN 978-1-4419-3189-4 ISBN 978-1-4757-3290-0 (eBook)

DOI 10.1007/978-1-4757-3290-0

1. Robust control. 2. Control theory. I. Paganini, Fernando G. II. Title.

III. Series.

TJ217.2 D85 1999

Contents

Series Preface	vii
Preface	ix
Figures	xix
0 Introduction	1
0.1 System representations	2
0.1.1 Block diagrams	2
0.1.2 Nonlinear equations and linear decompositions . .	4
0.2 Robust control problems and uncertainty	9
0.2.1 Stabilization	9
0.2.2 Disturbances and commands	12
0.2.3 Unmodeled dynamics	15
Notes and references	17
1 Preliminaries in Finite Dimensional Space	19
1.1 Linear spaces and mappings	19
1.1.1 Vector spaces	20
1.1.2 Subspaces	23
1.1.3 Bases, spans, and linear independence	23
1.1.4 Mappings and matrix representations	25
1.1.5 Change of basis and invariance	29
1.2 Subsets and convexity	31

1.2.1	Some basic topology	32
1.2.2	Convex sets	33
1.3	Matrix theory	40
1.3.1	Eigenvalues and Jordan form	40
1.3.2	Self-adjoint, unitary, and positive definite matrices	43
1.3.3	Singular value decomposition	47
1.4	Linear matrix inequalities	49
	Exercises	55
	Notes and references	58
2	State Space System Theory	59
2.1	The autonomous system	60
2.2	Controllability	63
2.2.1	Reachability	63
2.2.2	Properties of controllability	68
2.2.3	Stabilizability	71
2.2.4	Controllability from a single input	74
2.3	Eigenvalue assignment	76
2.3.1	Single-input case	76
2.3.2	Multi-input case	77
2.4	Observability	80
2.4.1	The unobservable subspace	80
2.4.2	Observers	83
2.4.3	Observer-based Controllers	85
2.5	Minimal realizations	86
2.6	Transfer functions and state space	89
2.6.1	Rational matrices and state space realizations	92
2.6.2	Minimality	94
	Exercises	96
	Notes and references	100
3	Linear Analysis	101
3.1	Normed and inner product spaces	102
3.1.1	Complete spaces	105
3.2	Operators	107
3.2.1	Banach algebras	109
3.2.2	Some elements of spectral theory	112
3.2.3	Adjoint operators in Hilbert space	115
3.3	Frequency domain spaces: Signals	117
3.3.1	The space \hat{L}_2 and the Fourier transform	117
3.3.2	The spaces H_2 and H_2^\perp and the Laplace transform	119
3.3.3	Summarizing the big picture	123
3.4	Frequency domain spaces: Operators	124
3.4.1	Time invariance and multiplication operators	125
3.4.2	Causality with time invariance	126

3.4.3	Causality and H_∞	128
	Exercises	131
	Notes and references	134
4	Model Realizations and Reduction	137
4.1	Lyapunov equations and inequalities	137
4.2	Observability operator and gramian	140
4.3	Controllability operator and gramian	143
4.4	Balanced realizations	146
4.5	Hankel operators	149
4.6	Model reduction	153
4.6.1	Limitations	154
4.6.2	Balanced truncation	157
4.6.3	Inner transfer functions	159
4.6.4	Bound for the balanced truncation error	161
4.7	Generalized gramians and truncations	166
	Exercises	168
	Notes and references	171
5	Stabilizing Controllers	173
5.1	System stability	175
5.2	Stabilization	178
5.2.1	Static state feedback stabilization via LMIs	179
5.2.2	An LMI characterization of the stabilization problem	180
5.3	Parametrization of stabilizing controllers	182
5.3.1	Coprime factorization	182
5.3.2	Controller parametrization	185
5.3.3	Closed-loop maps for the general system	190
	Exercises	191
	Notes and references	194
6	H_2 Optimal Control	195
6.1	Motivation for H_2 control	197
6.2	Riccati equation and Hamiltonian matrix	199
6.3	Synthesis	204
6.4	State feedback H_2 synthesis via LMIs	210
	Exercises	213
	Notes and references	215
7	H_∞ Synthesis	217
7.1	Two important matrix inequalities	218
7.1.1	The Kalman–Yakubovich–Popov Lemma	221
7.2	Synthesis	224
7.3	Controller reconstruction	231

Exercises	232
Notes and references	235
8 Uncertain Systems	237
8.1 Uncertainty modeling and well-connectedness	239
8.2 Arbitrary block-structured uncertainty	245
8.2.1 A scaled small gain test and its sufficiency	246
8.2.2 Necessity of the scaled small gain test	249
8.3 The structured singular value	255
8.4 Time invariant uncertainty	259
8.4.1 Analysis of time invariant uncertainty	260
8.4.2 The matrix structured singular value and its upper bound	267
Exercises	272
Notes and references	278
9 Feedback Control of Uncertain Systems	281
9.1 Extended spaces and stability	284
9.1.1 A general result on stability	286
9.1.2 Causality and maps on L_2 -extended	288
9.2 Robust stability and performance	290
9.2.1 Robust stability under arbitrary structured uncer- tainty	291
9.2.2 Robust stability under LTI uncertainty	292
9.2.3 Robust performance analysis	292
9.3 Robust controller synthesis	294
9.3.1 Robust synthesis against Δ_a^c	295
9.3.2 Robust synthesis against Δ_{TI}	300
9.3.3 D - K iteration: A synthesis heuristic	303
Exercises	305
Notes and references	307
10 Further Topics: Analysis	309
10.1 Analysis via integral quadratic constraints	309
10.1.1 Analysis results	315
10.1.2 The search for an appropriate IQC	320
10.2 Robust H_2 performance analysis	322
10.2.1 Problem formulation	323
10.2.2 Frequency domain methods and their interpretation	325
10.2.3 State space bounds involving causality	329
10.2.4 Discussion	333
Notes and references	336
11 Further Topics: Synthesis	339
11.1 Linear parameter varying and multidimensional systems	340

11.1.1	LPV synthesis	344
11.1.2	Realization theory for multidimensional systems	350
11.2	A framework for time-varying systems: Synthesis and analysis	354
11.2.1	Memoryless time-varying operators	356
11.2.2	The system function	358
11.2.3	Evaluating the ℓ_2 induced norm	362
11.2.4	LTV synthesis	366
11.2.5	Periodic systems and finite dimensional conditions	367
	Notes and references	369
A	Some Basic Measure Theory	371
A.1	Sets of zero measure	371
A.2	Terminology	374
A.3	Comments on norms and L_p spaces	376
	Notes and references	377
B	Proofs of Strict Separation	379
	Notes and references	384
C	μ-Simple Structures	385
C.1	The case of $\Delta_{1,1}$	386
C.2	The case of $\Delta_{0,3}$	390
	Notes and references	394
	Notation	395
	References	399
	Index	411
