Diffusions, Superdiffusions and Partial Differential Equations

E. B. Dynkin

American Mathematical Society
Providence, Rhode Island

Contents

Preface ix

Chapter 1. Introduction 1
1. Brownian and super-Brownian motions and differential equations 1
2. Exceptional sets in analysis and probability 5
3. Positive solutions and their boundary traces 7

Part 1. Parabolic Equations and Branching Exit Markov Systems 11

Chapter 2. Linear Parabolic Equations and Diffusions 13
1. Fundamental solution of a parabolic equation 13
2. Diffusions 15
3. Poisson operators and parabolic functions 18
4. Regular part of the boundary 22
5. Green's operators and equation $\dot{u} + Lu = -\rho$ 27
6. Notes 30

Chapter 3. Branching Exit Markov Systems 33
1. Introduction 33
2. Transition operators and $\mathbb{V}$-families 36
3. From a $\mathbb{V}$-family to a BEM system 39
4. Some properties of BEM systems 46
5. Notes 48

Chapter 4. Superprocesses 49
1. Definition and the first results 49
2. Superprocesses as limits of branching particle systems 53
3. Direct construction of superprocesses 54
4. Supplement to the definition of a superprocess 58
5. Graph of X 60
6. Notes 64

Chapter 5. Semilinear Parabolic Equations and Superdiffusions 67
1. Introduction 67
2. Connections between differential and integral equations 68
3. Absolute barriers 70
4. Operators V_Q 75
5. Boundary value problems 78
6. Notes 81

Part 2. Elliptic Equations and Diffusions 83

Chapter 6. Linear Elliptic Equations and Diffusions 85
1. Basic facts on second order elliptic equations 85
2. Time homogeneous diffusions 90
3. Probabilistic solution of equation $Lu = au$ 94
4. Notes 96

Chapter 7. Positive Harmonic Functions 97
1. Martin boundary 97
2. The existence of an exit point $\xi_{\zeta-}$ on the Martin boundary 99
3. h-transform 102
4. Integral representation of positive harmonic functions 103
5. Extreme elements and the tail σ-algebra 106
6. Notes 107

Chapter 8. Moderate Solutions of $Lu = \psi(u)$ 109
1. Introduction 109
2. From parabolic to elliptic setting 109
3. Moderate solutions 113
4. Sweeping of solutions 116
5. Lattice structure of $\mathcal{U}$ 118
6. Notes 121

Chapter 9. Stochastic Boundary Values of Solutions 123
1. Stochastic boundary values and potentials 123
2. Classes $\mathfrak{Z}_1$ and $\mathfrak{Z}_0$ 126
3. A relation between superdiffusions and conditional diffusions 128
4. Notes 130

Chapter 10. Rough Trace 131
1. Definition and preliminary discussion 131
2. Characterization of traces 135
3. Solutions w_B with Borel B 137
4. Notes 141

Chapter 11. Fine Trace 143
1. Singularity set $SG(u)$ 143
2. Convexity properties of V_D 145
3. Functions J_u 146
4. Properties of $SG(u)$ 150
5. Fine topology in E' 151
6. Auxiliary propositions 152
7. Fine trace 153
8. On solutions w_O 155
9. Notes 156

Chapter 12. Martin Capacity and Classes $\mathcal{N}_1$ and $\mathcal{N}_0$ 157
1. Martin capacity 157
2. Auxiliary propositions 158
3. Proof of the main theorem 160

4. Notes 162

Chapter 13. Null Sets and Polar Sets 163
1. Null sets 163
2. Action of diffeomorphisms on null sets 165
3. Supercritical and subcritical values of α 167
4. Null sets and polar sets 169
5. Dual definitions of capacities 172
6. Truncating sequences 174
7. Proof of the principal results 182
8. Notes 188

Chapter 14. Survey of Related Results 193
1. Branching measure-valued processes 193
2. Additive functionals 195
3. Path properties of the Dawson-Watanabe superprocess 197
4. A more general operator L 198
5. Equation $Lu = -\psi(u)$ 199
6. Equilibrium measures for superdiffusions 199
7. Moments of higher order 201
8. Martingale approach to superdiffusions 203
9. Excessive functions for superdiffusions and the corresponding h-transforms 204
10. Infinite divisibility and the Poisson representation 205
11. Historical superprocesses and snakes 207

Appendix A. Basic Facts on Markov Processes and Martingales 209
1. Multiplicative systems theorem 209
2. Stopping times 210
3. Markov processes 210
4. Martingales 214

Appendix B. Facts on Elliptic Differential Equations 217
1. Introduction 217
2. The Brandt and Schauder estimates 217
3. Upper bound for the Poisson kernel 218

Epilogue 221

1. σ-moderate solutions 221
2. Exceptional boundary sets 221
3. Exit boundary for a superdiffusion 222
