<i>Preface</i>	ix
<i>List of Symbols</i>	xi
INTRODUCTION	1
Chapter Zero — USEFUL FACTS ABOUT SETS	4
Chapter One — SENTENTIAL LOGIC	
1.0 Informal Remarks on Formal Languages	14
1.1 The Language of Sentential Logic	17
1.2 Induction and Recursion	22
1.3 Truth Assignments	30
1.4 Unique Readability	39
1.5 Sentential Connectives	44
1.6 Switching Circuits	53
1.7 Compactness and Effectiveness	58

Chapter Two — FIRST-ORDER LOGIC

2.0	Preliminary Remarks	65
2.1	First-Order Languages	67
2.2	Truth and Models	79
2.3	Unique Readability	97
2.4	A Deductive Calculus	101
2.5	Soundness and Completeness Theorems	124
2.6	Models of Theories	140
2.7	Interpretations between Theories	154
2.8	Nonstandard Analysis	164

Chapter Three — UNDECIDABILITY

3.0	Number Theory	174
3.1	Natural Numbers with Successor	178
3.2	Other Reducts of Number Theory	184
3.3	A Subtheory of Number Theory	193
3.4	Arithmetization of Syntax	217
3.5	Incompleteness and Undecidability	227
3.6	Applications to Set Theory	239
3.7	Representing Exponentiation	245
3.8	Recursive Functions	251

Chapter Four — SECOND-ORDER LOGIC

4.1	Second-Order Languages	268
4.2	Skolem Functions	274
4.3	Many-Sorted Logic	277
4.4	General Structures	281

<i>Index</i>	291
