Küchler, Uwe.

Exponential families of stochastic processes / Uwe Küchler,
Michael Sørensen.

p. cm. — (Springer series in statistics)

Includes bibliographical references and index.

ISBN 0-387-94981-X (alk. paper)

1. Stochastic processes. 2. Exponential families (Statistics)

I. Sørensen, Michael. II. Title. III. Series.

Contents

Preface	v
1 Introduction	1
2 Natural Exponential Families of Lévy Processes	7
2.1 Definition and probabilistic properties	7
2.2 Maximum likelihood estimation	14
2.3 Exercises	15
2.4 Bibliographic notes	16
3 Definitions and Examples	19
3.1 Basic definitions	19
3.2 Markov processes in discrete time	22
3.3 More general discrete time models	23
3.4 Counting processes and marked counting processes	24
3.5 Diffusion-type processes	27
3.6 Diffusion processes with jumps	29
3.7 Random fields	30
3.8 The significance of the filtration	31
3.9 Exercises	33
3.10 Bibliographic notes	34
4 First Properties	37
4.1 Exponential representations	37

4.2	Exponential families of stochastic processes with a non-empty kernel	39
4.3	Exercises	42
4.4	Bibliographic notes	43
5	Random Time Transformations	45
5.1	An important type of continuous time models	45
5.2	Statistical results	48
5.3	More general models	54
5.4	Inverse families	55
5.5	Discrete time models	57
5.6	Exercises	61
5.7	Bibliographic notes	62
6	Exponential Families of Markov Processes	65
6.1	Conditional exponential families	65
6.2	Markov processes	67
6.3	The structure of exponential families of Markov processes .	71
6.4	Exercises	77
6.5	Bibliographic notes	78
7	The Envelope Families	81
7.1	General theory	81
7.2	Markov processes	84
7.3	Explicit calculations	87
7.4	The Gaussian autoregression	90
7.5	The pure birth process	94
7.6	The Ornstein-Uhlenbeck process	96
7.7	A goodness-of-fit test	98
7.8	Exercises	100
7.9	Bibliographic notes	101
8	Likelihood Theory	103
8.1	Likelihood martingales	103
8.2	Existence and uniqueness of the maximum likelihood estimator	108
8.3	Consistency and asymptotic normality of the maximum likelihood estimator	113
8.4	Information matrices	124
8.5	Local asymptotic mixed normality	128
8.6	Exercises	130
8.7	Bibliographic notes	133

9	Linear Stochastic Differential Equations with Time Delay	135
9.1	The differential equations and the maximum likelihood estimator	135
9.2	The fundamental solution $x_0(\cdot)$	139
9.3	Asymptotic likelihood theory	141
9.4	The case $N = 1$	145
9.5	Exercises	155
9.6	Bibliographic notes	156
10	Sequential Methods	157
10.1	Preliminary results	157
10.2	Exact likelihood theory	161
10.3	Asymptotic likelihood theory	173
10.4	Comparison of sampling times	181
10.5	Moments of the stopping times	187
10.6	The sequential probability ratio test	192
10.7	Exercises	201
10.8	Bibliographic notes	203
11	The Semimartingale Approach	205
11.1	The local characteristics of a semimartingale	205
11.2	The natural exponential family generated by a semimartingale	208
11.3	Exponential families with a time-continuous likelihood function	216
11.4	Other types of exponential families of semimartingales	221
11.5	General exponential families of Lévy processes	225
11.6	Exponential families constructed by stochastic time transformation	229
11.7	Likelihood theory	231
11.8	Exercises	237
11.9	Bibliographic notes	238
12	Alternative Definitions	241
12.1	Exponential marginal distributions	242
12.2	Families with a sufficient reduction	249
12.3	Exercises	262
12.4	Bibliographic Notes	265
A	A Toolbox from Stochastic Calculus	267
A.1	Stochastic basis	267
A.2	Local martingales and increasing processes	269
A.3	Doob-Meyer decomposition	271
A.4	Semimartingales and stochastic integration	274
A.5	Stochastic differential equations	279

A.6	Ito's formula	281
A.7	Martingale limit theorems	284
A.8	Stochastic integration with respect to random measures .	288
A.9	Local characteristics of a semimartingale	291
A.10	A Girsanov-type theorem for semimartingales	294
B	Miscellaneous Results	299
B.1	The fundamental identity of sequential analysis	299
B.2	A conditional Radon-Nikodym derivative	301
B.3	Three lemmas	301
C	References	303
D	Basic Notation	317
	Index	319
