Table of Contents

Preface ix

Introduction xiii

Chapter 1. Fundamental Notions of Lattice Theory 1

1.1 Introduction to lattices 1
1.2 Complete lattices 5
1.3 Atomic and atomistic lattices 7
1.4 Meet-continuous lattices 9
1.5 Modular and semimodular lattices 12
1.6 The maximal chain property 15
1.7 Complemented lattices 17
1.8 Exercises 21

Chapter 2. Projective Geometries and Projective Lattices 25

2.1 Definition and examples of projective geometries 26
2.2 A second system of axioms 30
2.3 Subspaces 34
2.4 The lattice $\mathfrak{L}(G)$ of subspaces of G 36
2.5 Correspondence of projective geometries and projective lattices . . 40
2.6 Quotients by subspaces and isomorphism theorems 43
2.7 Decomposition into irreducible components 47
2.8 Exercises 49

Chapter 3. Closure Spaces and Matroids 55

3.1 Closure operators 56
3.2 Examples of matroids 59
3.3 Projective geometries as closure spaces 63
3.4 Complete atomistic lattices 67
3.5 Quotients by a closed subset 70
3.6 Isomorphism theorems 73
3.7 Exercises 75

Chapter 4. Dimension Theory 81

4.1 Independent subsets and bases 83

4.2 The rank of a subspace 86
4.3 General properties of the rank 89
4.4 The dimension theorem of degree n 92
4.5 Dimension theorems involving the corank 97
4.6 Applications to projective geometries 98
4.7 Matroids as sets with a rank function 100
4.8 Exercises 103

Chapter 5. Geometries of degree n 107

5.1 Definition and examples 108
5.2 Degree of submatroids and quotient geometries 110
5.3 Affine geometries 112
5.4 Embedding of a geometry of degree 1 117
5.5 Exercises 121

Chapter 6. Morphisms of Projective Geometries 127

6.1 Partial maps 128
6.2 Definition, properties and examples of morphisms 133
6.3 Morphisms induced by semilinear maps 137
6.4 The category of projective geometries 141
6.5 Homomorphisms 143
6.6 Examples of homomorphisms 148
6.7 Exercises 151

Chapter 7. Embeddings and Quotient-Maps 157

7.1 Mono-sources and initial sources 158
7.2 Embeddings 163
7.3 Epi-sinks and final sinks 169
7.4 Quotient-maps 172
7.5 Complementary subpaces 177
7.6 Factorization of morphisms 179
7.7 Exercises 182

Chapter 8. Endomorphisms and the Desargues Property 187

8.1 Axis and center of an endomorphism 188
8.2 Endomorphisms with a given axis 191
8.3 Endomorphisms induced by a hyperplane-embedding 195
8.4 Arguesian geometries 197
8.5 Non-arguesian planes 204
8.6 Exercises 209

Chapter 9. Homogeneous Coordinates 215

9.1 The homothety fields of an arguesian geometry 216
9.2 Coordinates and hyperplane-embeddings 218
9.3 The fundamental theorem for homomorphisms 221
9.4 Uniqueness of the associated fields and vector spaces 224
9.5 Arguesian planes 226
9.6 The Pappus property 228
9.7 Exercises 230

Chapter 10. Morphisms and Semilinear Maps 235

10.1 The fundamental theorem 236
10.2 Semilinear maps and extensions of morphisms 238
10.3 The category of arguesian geometries 242
10.4 Points in general position 244
10.5 Projective subgeometries of an arguesian geometry 247
10.6 Exercises 249

Chapter 11. Duality 255

11.1 Duality for vector spaces 256
11.2 The dual geometry 258
11.3 Pairings, dualities and embedding into the bidual 261
11.4 The duality functor 264
11.5 Pairings and sesquilinear forms 267
11.6 Exercises 269

Chapter 12. Related Categories 275

12.1 The category of closure spaces 276
12.2 Galois connections and complete lattices 278
12.3 The category of complete atomistic lattices 281
12.4 Morphisms between affine geometries 284
12.5 Characterization of strong morphisms 287
12.6 Characterization of morphisms 291
12.7 Exercises 295

Chapter 13. Lattices of Closed Subspaces 301

13.1 Topological vector spaces 302
13.2 Mackey geometries 305
13.3 Continuous morphisms 308
13.4 Dualized geometries 310
13.5 Continuous homomorphisms 315

13.6 Exercises 318

Chapter 14. Orthogonality 323

14.1 Orthogeometries 324
14.2 Ortholattices and orthosystems 327
14.3 Orthogonal morphisms 330
14.4 The adjunction functor 334
14.5 Hilbertian geometries 337
14.6 Exercises 340

List of Problems 345

Bibliography 347

List of Axioms 357

List of Symbols 358
