and Theoretical Computer Science

Volume 28

Groups and Computation II

Workshop on Groups and Computation
June 7–10, 1995

Larry Finkelstein
William M. Kantor
Editors

NSF Science and Technology Center
in Discrete Mathematics and Theoretical Computer Science
A consortium of Rutgers University, Princeton University,
AT&T Labs, Bell Labs, and Bellcore

American Mathematical Society

Contents

Foreword ix
Preface xi
Workshop Program xiii
Participants xv
Randomization in group algorithms: Conceptual questions
László Babai 1
Experimenting and computing with infinite groups
Gilbert Baumslag and Charles F. Miller III 19
Towards polynomial time algorithms for matrix groups
Robert Beals 31
Calculating the order of an invertible matrix
Frank Celler and C. R. Leedham-Green 55
A non-constructive recognition algorithm for the special linear and other classical groups
Frank Celler and C. R. Leedham-Green 61
GAP/MPI: Facilitating parallelism
Gene Cooperman 69
Constructive recognition of a black box group isomorphic to $GL(n, 2)$
Gene Cooperman, Larry Finkelstein and Steve Linton 85
Special presentations for finite soluble groups and computing (pre-)Frattini subgroups
Bettina Eick 101
Algorithms for group actions applied to graph generation
Thomas Grüner, Reinhard Laue and Markus Meringer 113
Partitions, refinements, and permutation group computation
Jeffrey S. Leon 123
A polycyclic quotient algorithm
Eddie H. Lo 159
Computing the Fitting subgroup and solvable radical for small-base permutation groups in nearly linear time
Eugene M. Luks and Ákos Seress 169
Generalized FFT's—A survey of some recent results
David K. Maslen and Daniel M. Rockmore 183
The complexity of McKay's canonical labeling algorithm
Takunari Miyazaki 239
On nearly linear time algorithms for Sylow subgroups of small base permutation groups
Prabhav Morje 257

Implementing a recognition algorithm for classical groups
ALICE C. NIEMEYER and CHERYL E. PRAEGER 273
Algorithms for polycyclic-by-finite matrix groups
GRETCHEN OSTHEIMER 297
Asymptotic results for simple groups and some applications
LÁSZLÓ PYBER 309
Some applications of generalized FFT's
DANIEL N. ROCKMORE 329
Computing permutation representations for matrix groups in parallel environments
MICHAEL TSELMAN 371
