Contents

Preface xiii

1. INTRODUCTION 1
   1.1 Motivation 1
   1.2 Structure of Global Optimization Models 3
   1.3 Illustrative Applications of Global Optimization 4
   1.4 Deterministic Global Optimization : Approaches and Classes of Problems 18
   1.5 Complexity Analysis 19
   1.6 Research Areas and Important Applications 23
   1.7 Publications and Conferences 25
   1.8 Chemical Engineering Contributions 27
   1.9 Scope of the Book 32

2. BASIC CONCEPTS OF GLOBAL OPTIMIZATION 33
   2.1 Convex Sets 33
   2.2 Convex and Concave Functions 35
   2.3 Quasi-Convex and Pseudo-Convex Functions 42
   2.4 Convex Envelopes 45
   2.5 Local, Global, ϵ-Global Minima 57
   2.6 Difference of Convex (D.C.) Functions 58

Part I Biconvex and Bilinear Problems

3. THE GOP PRIMAL - RELAXED DUAL DECOMPOSITION APPROACH : THEORY 67
   3.1 Problem Statement 68
   3.2 Duality Theory 70
   3.3 Mathematical Properties 73
   3.4 Infeasible Primal Problems 82
   3.5 The Global OPtimization (GOP) Algorithm 84
   3.6 Finite ϵ-Convergence and ϵ-Global Optimality 87
   3.7 Illustrative Example 90

3.8 The GOP for Quadratic Problems with Linear Constraints 95
3.9 The GOP for Quadratically Constrained Problems 96
3.10 The GOP for Univariate Polynomial Problems 98
3.11 Additional Properties of the Lagrange Function 105
3.12 The GOP in a Branch and Bound Framework 114
3.13 Reformulation Of The Relaxed Dual As A Single MILP Problem 126
3.14 A Linear Branching Scheme for the GOP Algorithm 134

4. THE GOP APPROACH : IMPLEMENTATION AND COMPUTATIONAL STUDIES 141
4.1 Implementation of the GOP and GOP/MILP Algorithms 141
4.2 Computational Studies 152
4.3 Summary 168

5. THE GOP APPROACH IN BILEVEL LINEAR AND QUADRATIC PROBLEMS 173
5.1 Introduction 173
5.2 Bilevel linear programming problem 175
5.3 Modified GOP Algorithm 181
5.4 bilevel linear-quadratic and bilevel quadratic-quadratic problems 187

6. THE GOP APPROACH IN PHASE AND CHEMICAL EQUILIBRIUM PROBLEMS 193
6.1 Introduction and Formulation of Minimizing the Gibbs Free Energy 193
6.2 Application of the GOP to NRTL Equation 198
6.3 Computational Studies 212
6.4 Tangent Plane Stability Criterion 225
6.5 Application to the NRTL Equation 229
6.6 Illustrative Example for the NRTL : n-Butyl-Acetate – Water 234

7. THE GOP APPROACH : DISTRIBUTED IMPLEMENTATION 243
7.1 Critical Components of the Distributed GOP Approach 243
7.2 Large Scale Indefinite Quadratic Problems 247
7.3 Large Scale Pooling and Blending Problems 251

Part II Signomial Problems

8. GENERALIZED GEOMETRIC PROGRAMMING : THEORY 257
8.1 Introduction 257
8.2 Theoretical Analysis 261
8.3 Global Optimization Algorithm 276
8.4 Proof of Convergence to the Global Minimum 282
8.5 Illustrative Example 283

9. GENERALIZED GEOMETRIC PROGRAMMING : COMPUTATIONAL STUDIES 289
9.1 Chemical Engineering Design Examples 289
9.2 Robust Stability Analysis 297

Part III Towards General Twice Differentiable NLPs

10. FROM BICONVEX TO GENERAL TWICE DIFFERENTIABLE NLPS 309
10.1 Theoretical Results : GOP to αBB 309
10.2 Estimation of the Parameter α 311

11. THE αBB FOR BOX CONSTRAINED TWICE-DIFFERENTIABLE NLPS : THEORY 315
11.1 Formulation and D.C. Transformation 315
11.2 Convex Lower Bounding Function 318
11.3 Global Optimization Algorithm αBB 323
11.4 Steps of the Global Optimization Algorithm αBB 324
11.5 Proof of Convergence to the Global Minimum 326
11.6 Complexity Analysis 329

12. THE αBB FOR CONSTRAINED TWICE -DIFFERENTIABLE NLPS : THEORY 333
12.1 Formulation and Principles of the αBB Global Optimization Algorithm 334
12.2 Underestimation Strategies 334
12.3 Overall Valid Convex Underestimator 340
12.4 Rigorous calculation of α for general NLPs 342
12.5 Illustrative Example 355
12.6 Global Optimization Algorithm, αBB 361
12.7 Geometrical Interpretation of the αBB Approach 365

13. COMPUTATIONAL STUDIES OF THE αBB APPROACH 377
13.1 Algorithmic Issues and Development of the αBB 377
13.2 Implementation of the αBB 382
13.3 Computational Studies of the αBB Approach 384

14. GLOBAL OPTIMIZATION IN MICROCLUSTERS 403
14.1 Introduction 403
14.2 Problem Definition 407
14.3 Novel D.C. Transformation via Eigenvalue Analysis 409
14.4 Mathematical Model 418
14.5 Algorithmic Procedure 423
14.6 Small Cluster Examples 425
14.7 A Relaxation of the Global Optimization Approach 426
14.8 Discussion on Magic Numbers and Interatomic Spacing 431
14.9 Summary 432

15. THE αBB APPROACH IN MOLECULAR STRUCTURE PREDICTION 435
15.1 Introduction and Background 435
15.2 Problem Definition 438
15.3 Problem Reformulation in Internal Coordinates 439
15.4 Convex Lower Bounding Function L of V 444
15.5 Computational Study : Propanal 447

16. THE αBB APPROACH IN PROTEIN FOLDING 451
16.1 Introduction 451
16.2 Mathematical Modeling 452
16.3 Global Optimization 459
16.4 Computational Studies : Unsolvated Oligopeptides 466
16.5 Computational Studies : Solvated Oligopeptides 471

17. THE αBB APPROACH IN PEPTIDE DOCKING 481
17.1 Introduction 481
17.2 Peptide Docking Methods 483
17.3 Problem Definition 485
17.4 Outline of Approach 488
17.5 Mathematical Modeling and Problem Formulation 490
17.6 Global Optimization Approach and Its Interface 493
17.7 Computational Studies and Discussion 498

18. THE αBB APPROACH IN BATCH DESIGN UNDER UNCERTAINTY 507
18.1 Introduction 507
18.2 Multiproduct Design Problem 509
18.3 Lower Bounding Problem Formulations 517
18.4 Global Optimization Algorithm - Modified αBB 524
18.5 Illustrative Example 528
18.6 Mixed-Product Campaign Formulation 530
18.7 Computational Studies 533
18.8 Comparison to Alternative Underestimating Approaches 538

19. THE αBB APPROACH IN PARAMETER ESTIMATION 543
19.1 Introduction 543
19.2 Maximum Likelihood Estimation 545
19.3 Global Optimization Framework 548
19.4 Global Optimization Algorithm 551
19.5 Computational Studies 554

Part IV Nonlinear and Mixed-Integer Optimization

20. INTRODUCTION TO NONLINEAR AND MIXED-INTEGER OPTIMIZATION 571
20.1 Motivation 571
20.2 Mathematical Description 575
20.3 Overview of Local Optimization Approaches for Convex MINLP Models 576
20.4 Overview of Global Optimization Approaches for Nonconvex MINLP Models 579

21. THE SMIN-αBB APPROACH : THEORY AND COMPUTATIONS 587
21.1 Mathematical Formulation 587
21.2 Generation of Valid Lower Bounds 588

21.3 Generation of Upper Bounds 590
21.4 Selection of Branching Variables 591
21.5 Updates of Variable Bounds 592
21.6 The SMIN-αBB Algorithm 595
21.7 Computational studies 598

22. THE GMIN-αBB APPROACH : THEORY AND COMPUTATIONS 617
22.1 Mathematical Formulation 618
22.2 Generation of Lower Bounds 618
22.3 Generation of Upper Bounds 621
22.4 Selection of Branching Variables 622
22.5 Updates of Variable Bounds 622
22.6 The GMIN-αBB Algorithm 624
22.7 Computational studies 624

Part V Nonlinear Constrained Systems of Equations

23. ALL SOLUTIONS OF NONLINEAR CONSTRAINED SYSTEMS OF EQUATIONS 641
23.1 Introduction 641
23.2 Problem Definition 643
23.3 Convex Lower Bounding 646
23.4 procedure for enclosing all solutions 653
23.5 Computational Studies 657

24. LOCATING ALL HOMOGENEOUS AZEOTROPES 667
24.1 Introduction 667
24.2 Problem Description 668
24.3 Mathematical Formulation 670
24.4 Activity Coefficient Models 672
24.5 Computational Studies 692

References 699
